FLEXOR RETINACULUM & HAND

BÝ DR ABULMAATÝ MOHAMED ASSISTANT PROFESSOR ANATOMY & EMBRYOLOGÝ MUTAH UNIVERSITY

FLEXOR RETINACULUM & HAND

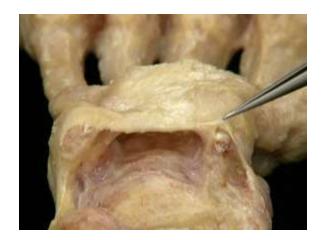

FLEXOR RETIN&CULUM

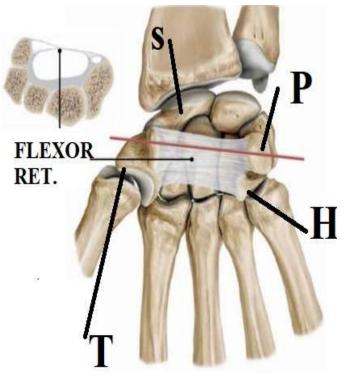

Def.: thick band of deep fascia in front of carpal bones converting their concavity into tunnel called carpal tunnel

Function: keep long flexor tendons in place during contraction.

Attachments:

medially: attached to pisiform & hamate laterally: splitted into 2 layers then attached to scaphoid & trapezium.

FLEXOR RETIN&CULUM

Relations:

- Deep (structures in carpal tunnel):
- 1-median nerve(directly under retinaculum)
- 2-tendon of FPL(lateral to other tendons)
- 3-synovial sheath for tendon of FPL (radial bursa)
- 4-tendons of FDS & FDP
- 5-common synovial sheath for tendons of FDS& FDP (ulnar bursa) Between the 2 lateral laminae:
- tendon of flex. carpi radialis & its synovial sheath

Flexer digitorum superficialis tendons

out sheath of Revol

politicis longue (radial bursa) intreside calpal ligament r retinaculum) (reflected)

Tendinous sheath of flexic

disin because tradial house

FLEXOR RETIN&CULUM

Relations:

Superficial:

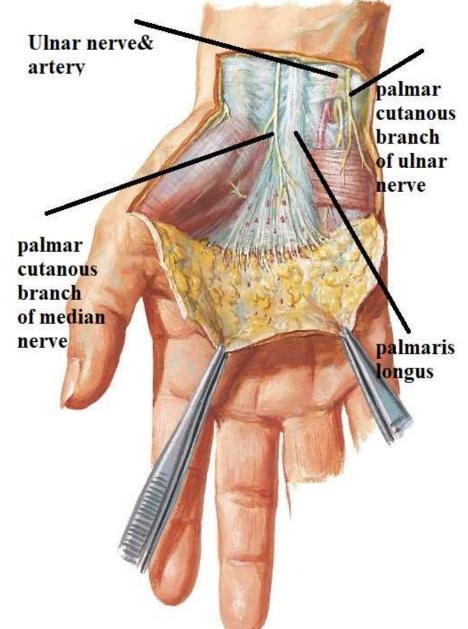

1-ulnar n.

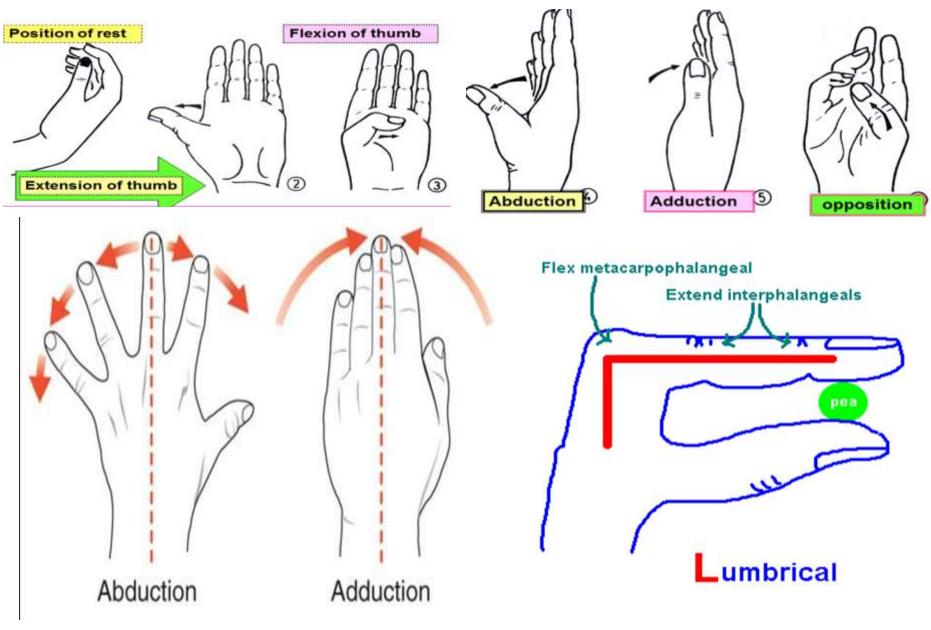

2-ulnar vessels.

3-palmar cutaneous br. of ulnar n.

4-tendon of palmaris longus.

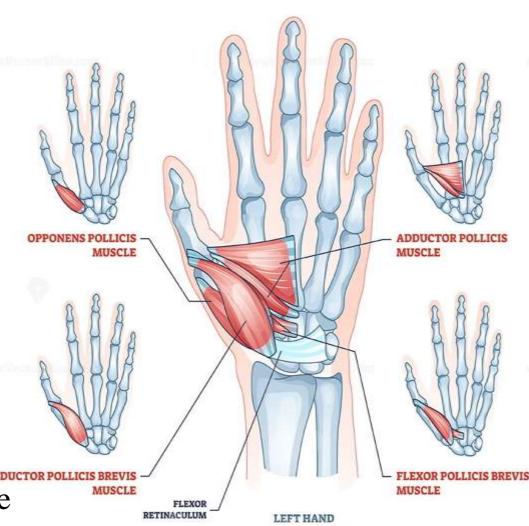

5-palmar cutaneous br. of median n.

Short muscles of thumb

- 1-Abductor pollicis brevis :-
- abduction of thumb
- 2-Flexor Pollicis brevis:-
- flexion of thumb
- 3-Opponens pollicis:-
- opposition of thumb by
- flexion & medial rotation
- of 1st metacarpal bone
- 4-Adductor pollicis:-
- adduction of thumb
- N.B.:- 1,2,3= thenar eminence

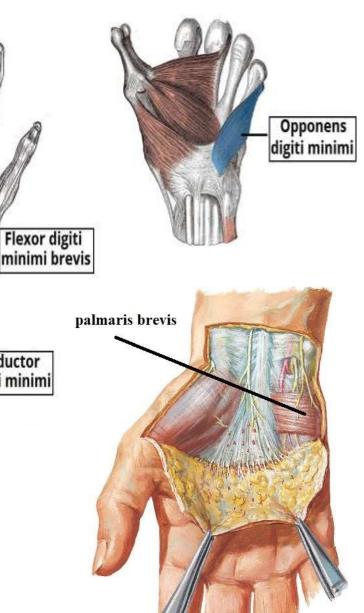

ANTERIOR VIEW

Short muscles of little finger 1-Abductor digiti minimi :abduction of little finger 2-Flexor digiti minimi:flexion of little finger 3-Opponens digiti minimi:lateral rotation of 5th metacarpal bone 4-palmaris brevis:-Abductor digiti minimi to corrugate the skin at the base of the hypothenar eminence

and So improve the grip of the palm in holding a rounded object

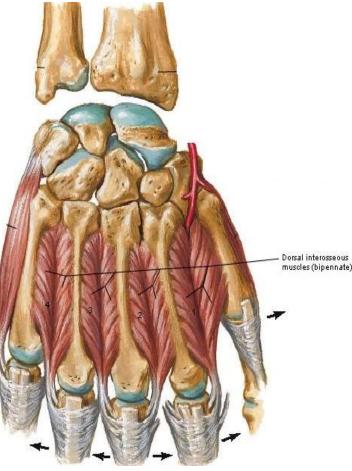

1,2,3= hypothenar eminence

The intermediate group

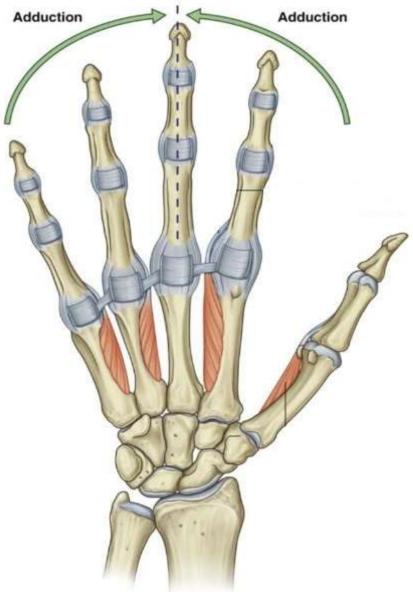

Dorsal interossei:-

- bipennate
- 4 muscles for all fingers except 1st & 5th
- abduct the middle 3 fingers
 (away from axis of middle finger) DAB

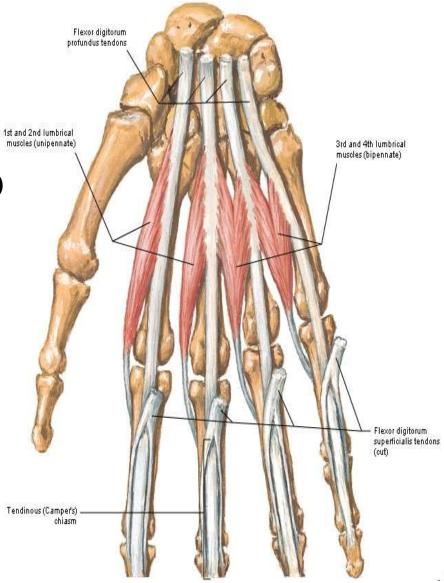

The intermediate group

- Palmar interossei
- unipennate
- 4 muscles for all fingers except 3rd
- adduct the corresponding finger (towards axis of middle finger) PAD

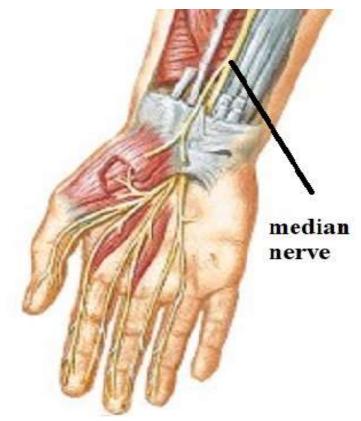

The intermediate group

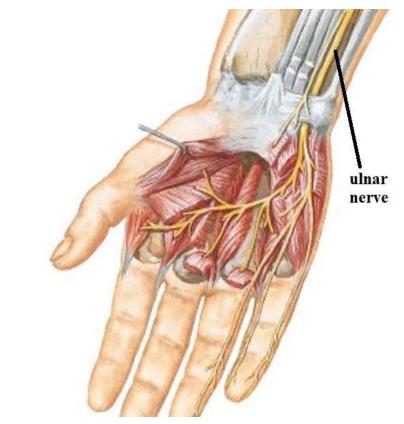

- Lumbrical muscles
- 4 muscles for all fingers except 1st
- put the hand in writing position (flexion of M/P& extension of I/P)

Nerve supply of muscles of the hand:-

All muscles of the hand are supplied by the **ulnar nerve** except muscles of the thenar eminence and 1st & 2nd lumbricals which are supplied by **median nerve**

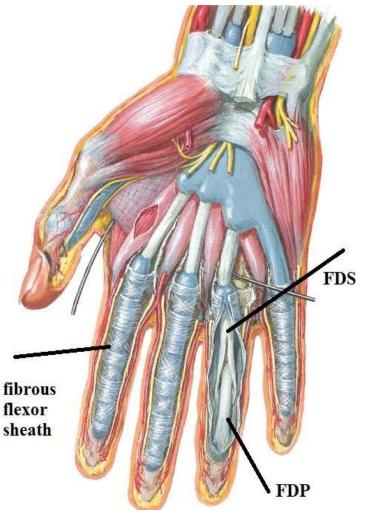

FASCIA OF THE HAND

Fibrous flexor sheath:

Def: thick deep fascia in front phalanges of medial 4 fingers contents: 2 tendons FDS & FDP.

FASCIA OF THE HAND

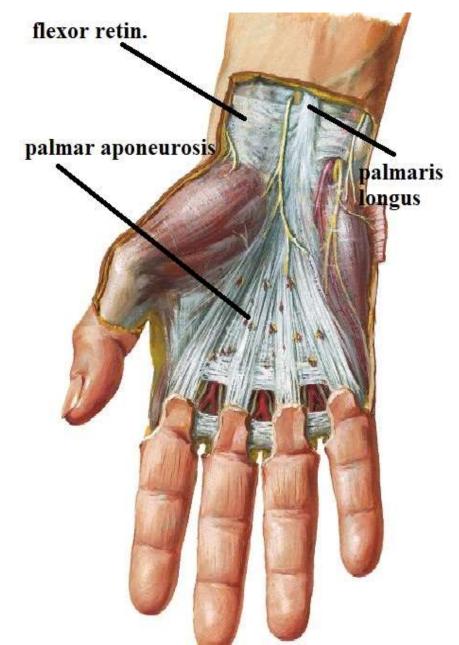

PALMAR APONEUROSIS

Def: thick deep fascia in front of middle part of hand.

shape & attachment: triangle with
apex: attach to flexor retinaculum &
 palmaris longus

base: give 4 slips to medial 4 fingers each attach to skin

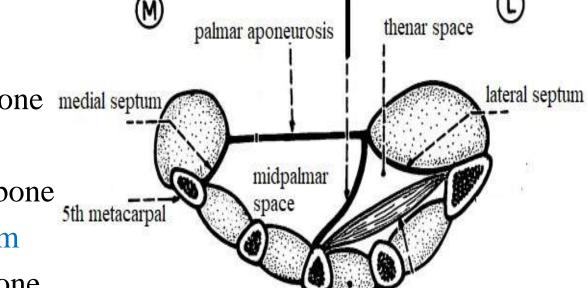

& fibrous flexor sheath & proximal phalanx

FASCIA OF THE HAND PALMAR APONEUROSIS

extensions:

- lateral palmar septum
- attach to 1st metacarpal bone medial septum
- medial palmar septum
- attach to 5th metacarpal bone
- intermediate palmar septum
- attach to 3rd metacarpal bone

intermediate septum

- N.B: the medial & lateral septa divide hand into: 3 compartments lateral: thenar eminence.
- medial: hypothenar eminence
- intermediate compartment that is divided by intermediate palmar septum Into1-thenar space: lateral to intermediate septum
 - 2-midpalmar space: medial to intermediate septum

FASCIAL SPACES OF THE HAND

Thenar space

Contents

flexor tendons to 3, 4, 5 fingers

- 1-Tendon of FPL TO thumb.
- 2- Tendons of FDS & FDP TO index3-digital nerves TO thumb & indexMidpalmar space:

contents

- 1- Tendons of FDS & FDP TO 3rd , 4th , 5th fingers
- 2-digital nerves & vessels TO 3^{rd} , 4^{th} , 5^{th} fingers
- 3-superficial palmar arch
- 4-deep palmar arch & deep br. of ulnar nerve
