

Muscles of back of forearm

Superficial group (7)

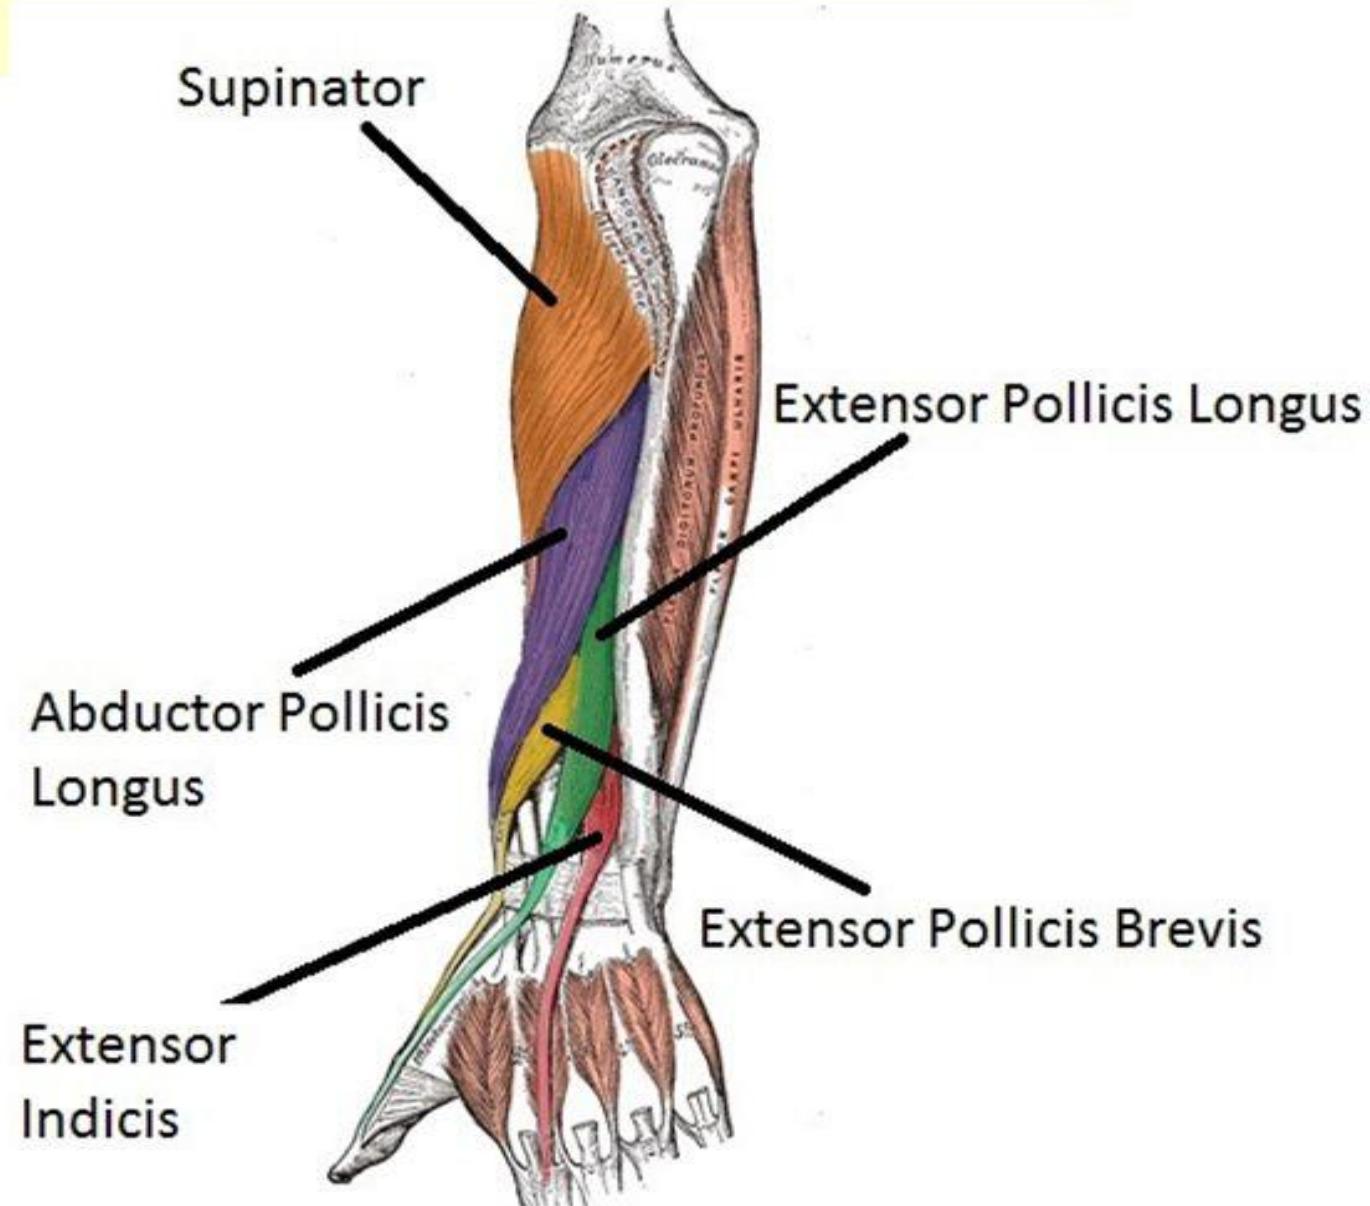

Deep group (5)

1. **Brachioradialis**
2. **Extensor carpi radialis longus**
3. **Extensor carpi radialis brevis**
4. **Extensor digitorum**
5. **Extensor digiti minimi**
6. **Extensor carpi ulnaris**
7. **anconeus**

Deep Group

- Supinator
- Abductor pollicis longus
- Extensor pollicis brevis
- Extensor pollicis Longus
- Extensor indicis
- Except for the supinator muscle, all these deep layer muscles originate from the posterior surfaces of the radius, ulna, and interosseous membrane and pass into the thumb and fingers.

1- Brachioradialis

- **Origin:**

- Upper 2/3 of lateral supracondylar ridge of the humerus.

- **Insertion:**

- Base of styloid process of radius.

- **Nerve supply:**

- Radial nerve.

- **Action:**

- Flexion of elbow at midprone position.

2- Extensor carpi radialis longus

- **Origin:**
 - Lower 1/3 of lateral supracondylar ridge of the humerus.
- **Insertion:**
 - Posterior surface of base of 2nd metacarpal bone.
- **Nerve supply:**
 - Radial nerve.
- **Action:**
 - Extension and abduction of wrist.

3- Extensor carpi radialis brevis

- **Origin:**
 - Common extensor origin (**front** of lateral epicondyle of the humerus).
- **Insertion:**
 - Posterior surface of base of **3rd** metacarpal bone.
- **Nerve supply:**
 - Posterior interosseous nerve.
- **Actions:**
 - Extension and abduction of wrist.

4- Extensor digitorum

- **Origin:** Common extensor origin.
- **Insertion:**
 - The tendons expands on the posterior surface of proximal phalanges of the medial 4 fingers forming the **extensor expansion**. Each extensor expansion splits into 3 slips: a central slip inserted into the base of the middle phalanx, and 2 lateral slips which are inserted into the base of distal phalanx. The extensor expansion receives also the insertion of the corresponding lumbrical and interossei muscles
- **Nerve supply:** Posterior interosseous nerve.
- **Actions:**
 - Extension of all joints of the medial 4 fingers.
 - It helps in extension of the wrist.

5- Extensor digiti minimi

Origin:

- Common extensor origin.

Insertion:

- Extensor expansion of the little finger.

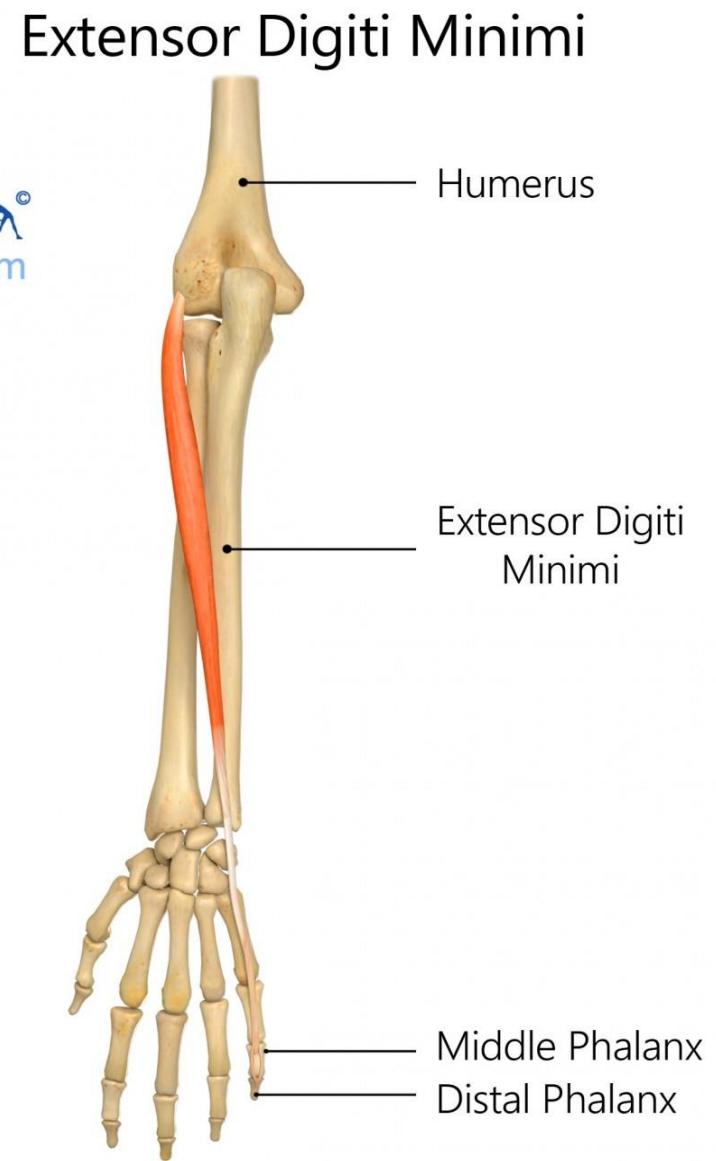

Nerve supply:

- Posterior interosseous nerve.

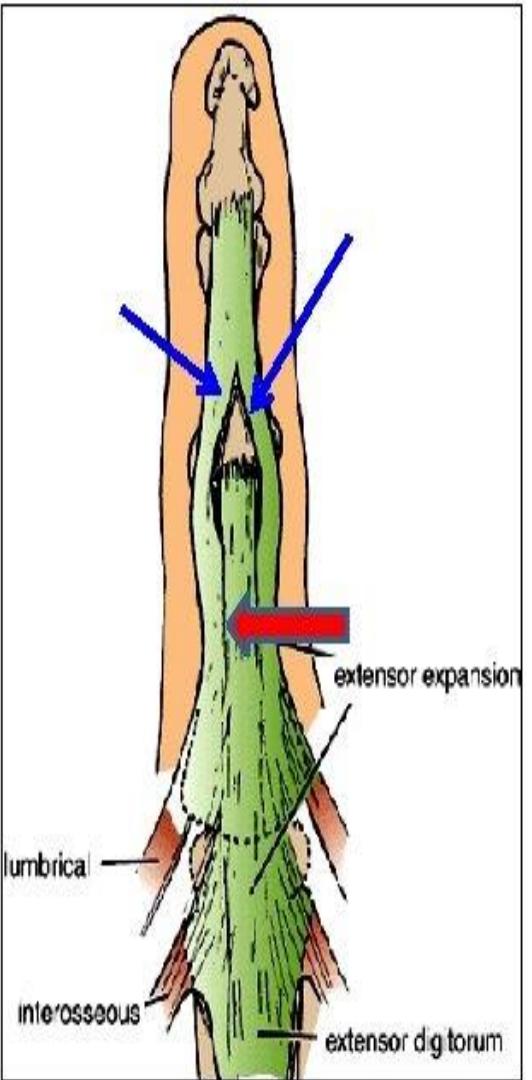

Actions:

- Extension of all joints of little finger + Extension of wrist.

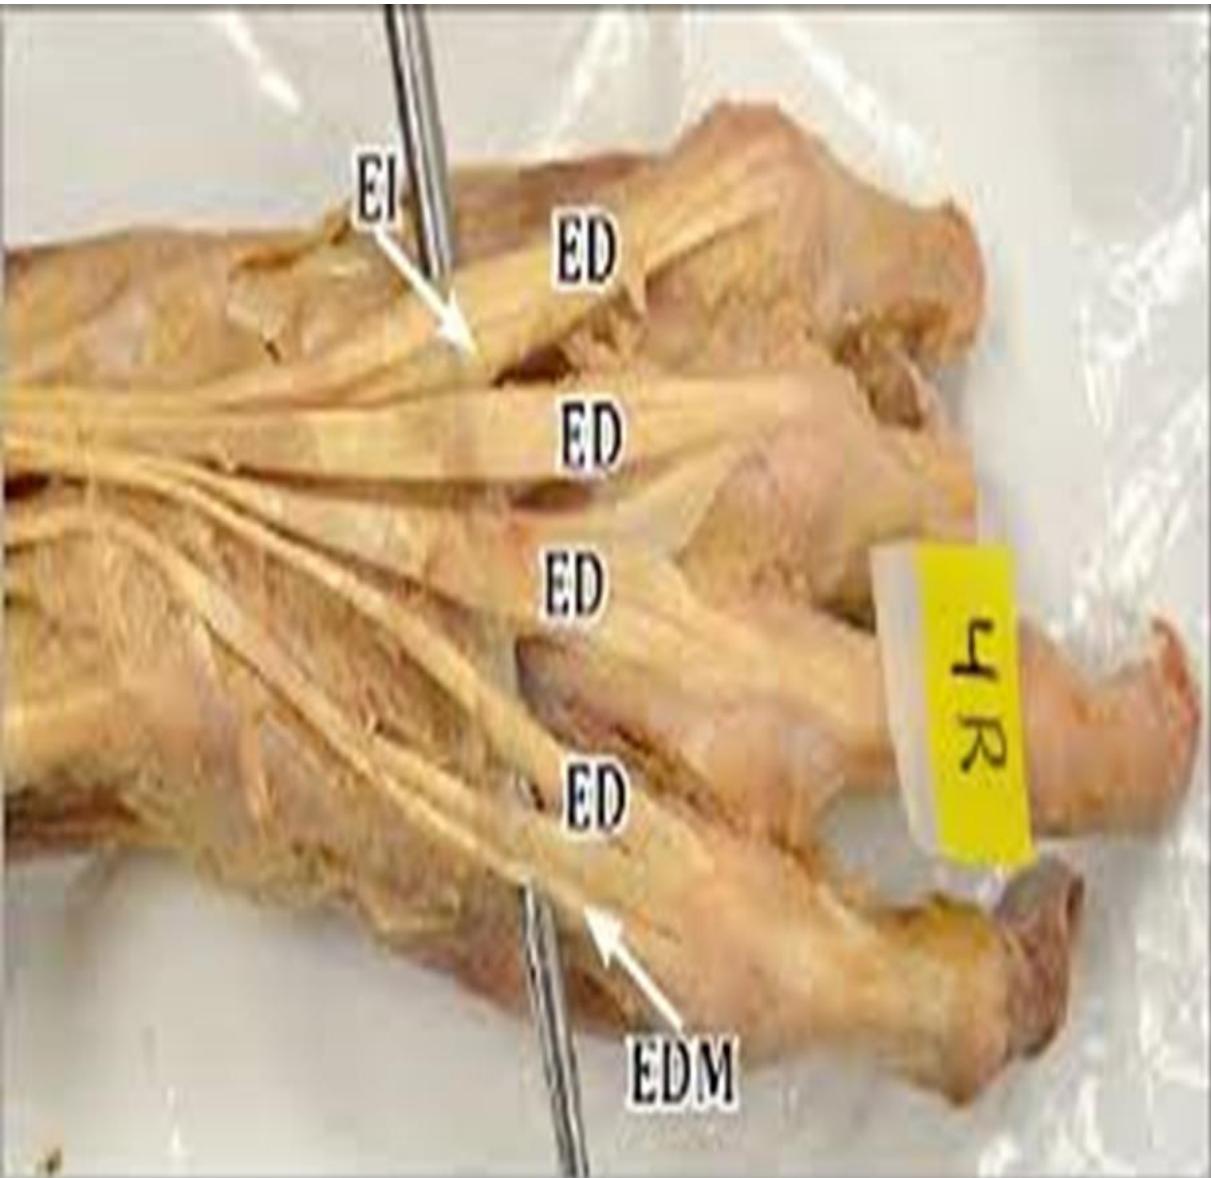

REHAB
My Patient.com

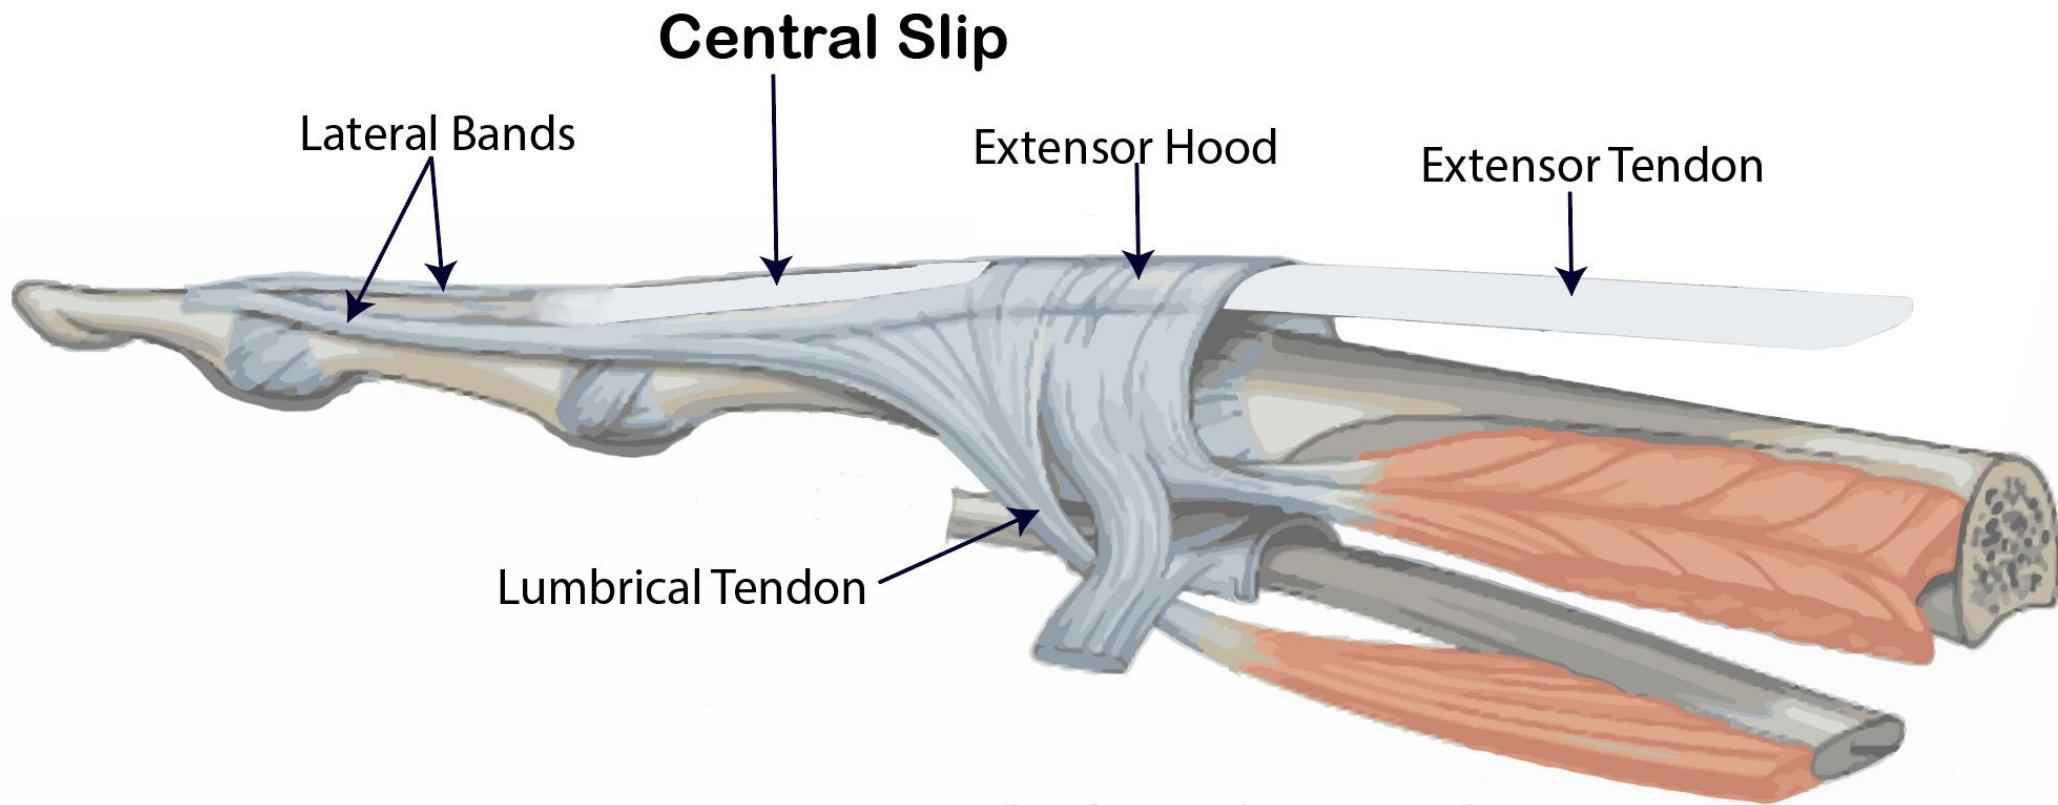

Extensor Expansion

- Formed from the expansion of extensor digitorum tendons
- At the PIJ, the expansion splits into 3 parts
 - **One Central** inserted into the base of Middle phalanx.
 - **Two laterals** inserted into the base of the Distal phalanx.
- The Expansion Receives the insertions of:
 - **Corresponding Interosseous muscle (on each side).**
 - **Lumbrical muscle (on the lateral side).**

6- Extensor carpi ulnaris:

Origin:

- Common extensor origin.
- Posterior border of ulna.

Insertion:

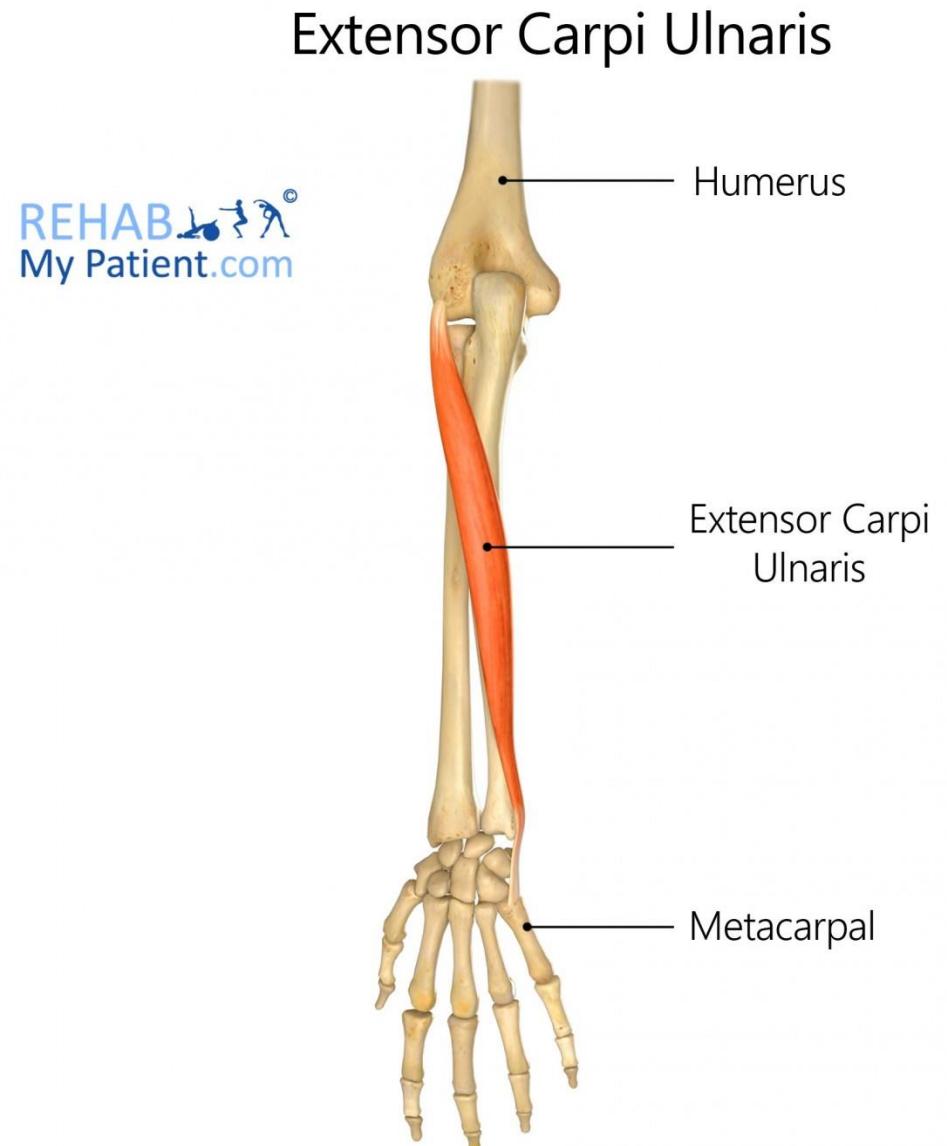

- Posterior surface of the base of 5th metacarpal bone.

Nerve supply:

- Posterior interosseous nerve.

Actions:

- Extension and adduction of the wrist.

Extensor Carpi Ulnaris

Humerus

Extensor Carpi
Ulnaris

Metacarpal

7- Anconeus

Origin:

- Posterior aspect of lateral epicondyle of humerus.

Insertion:

- Lateral surface of olecranon process of ulna

Nerve supply:

- Radial nerve.

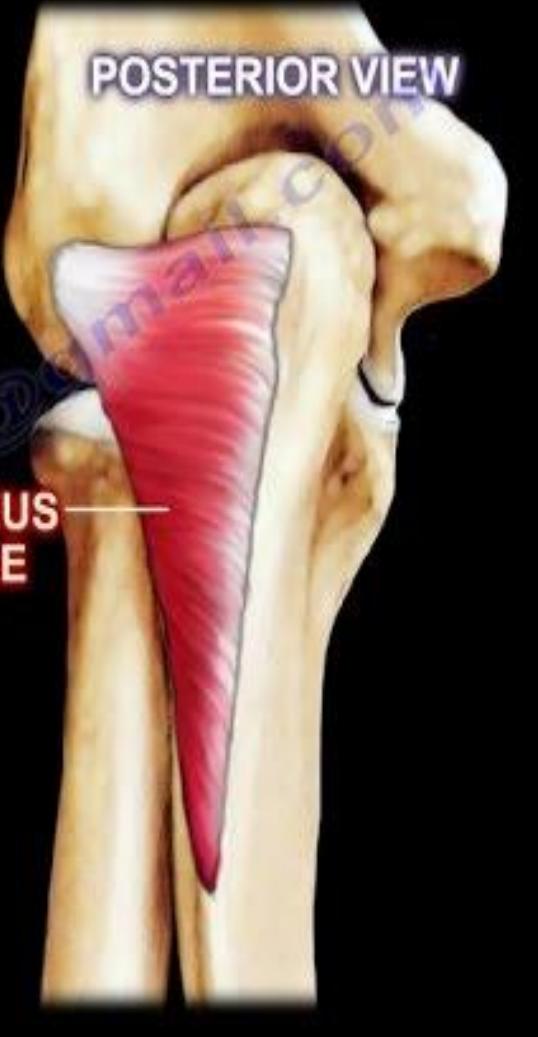

Action:

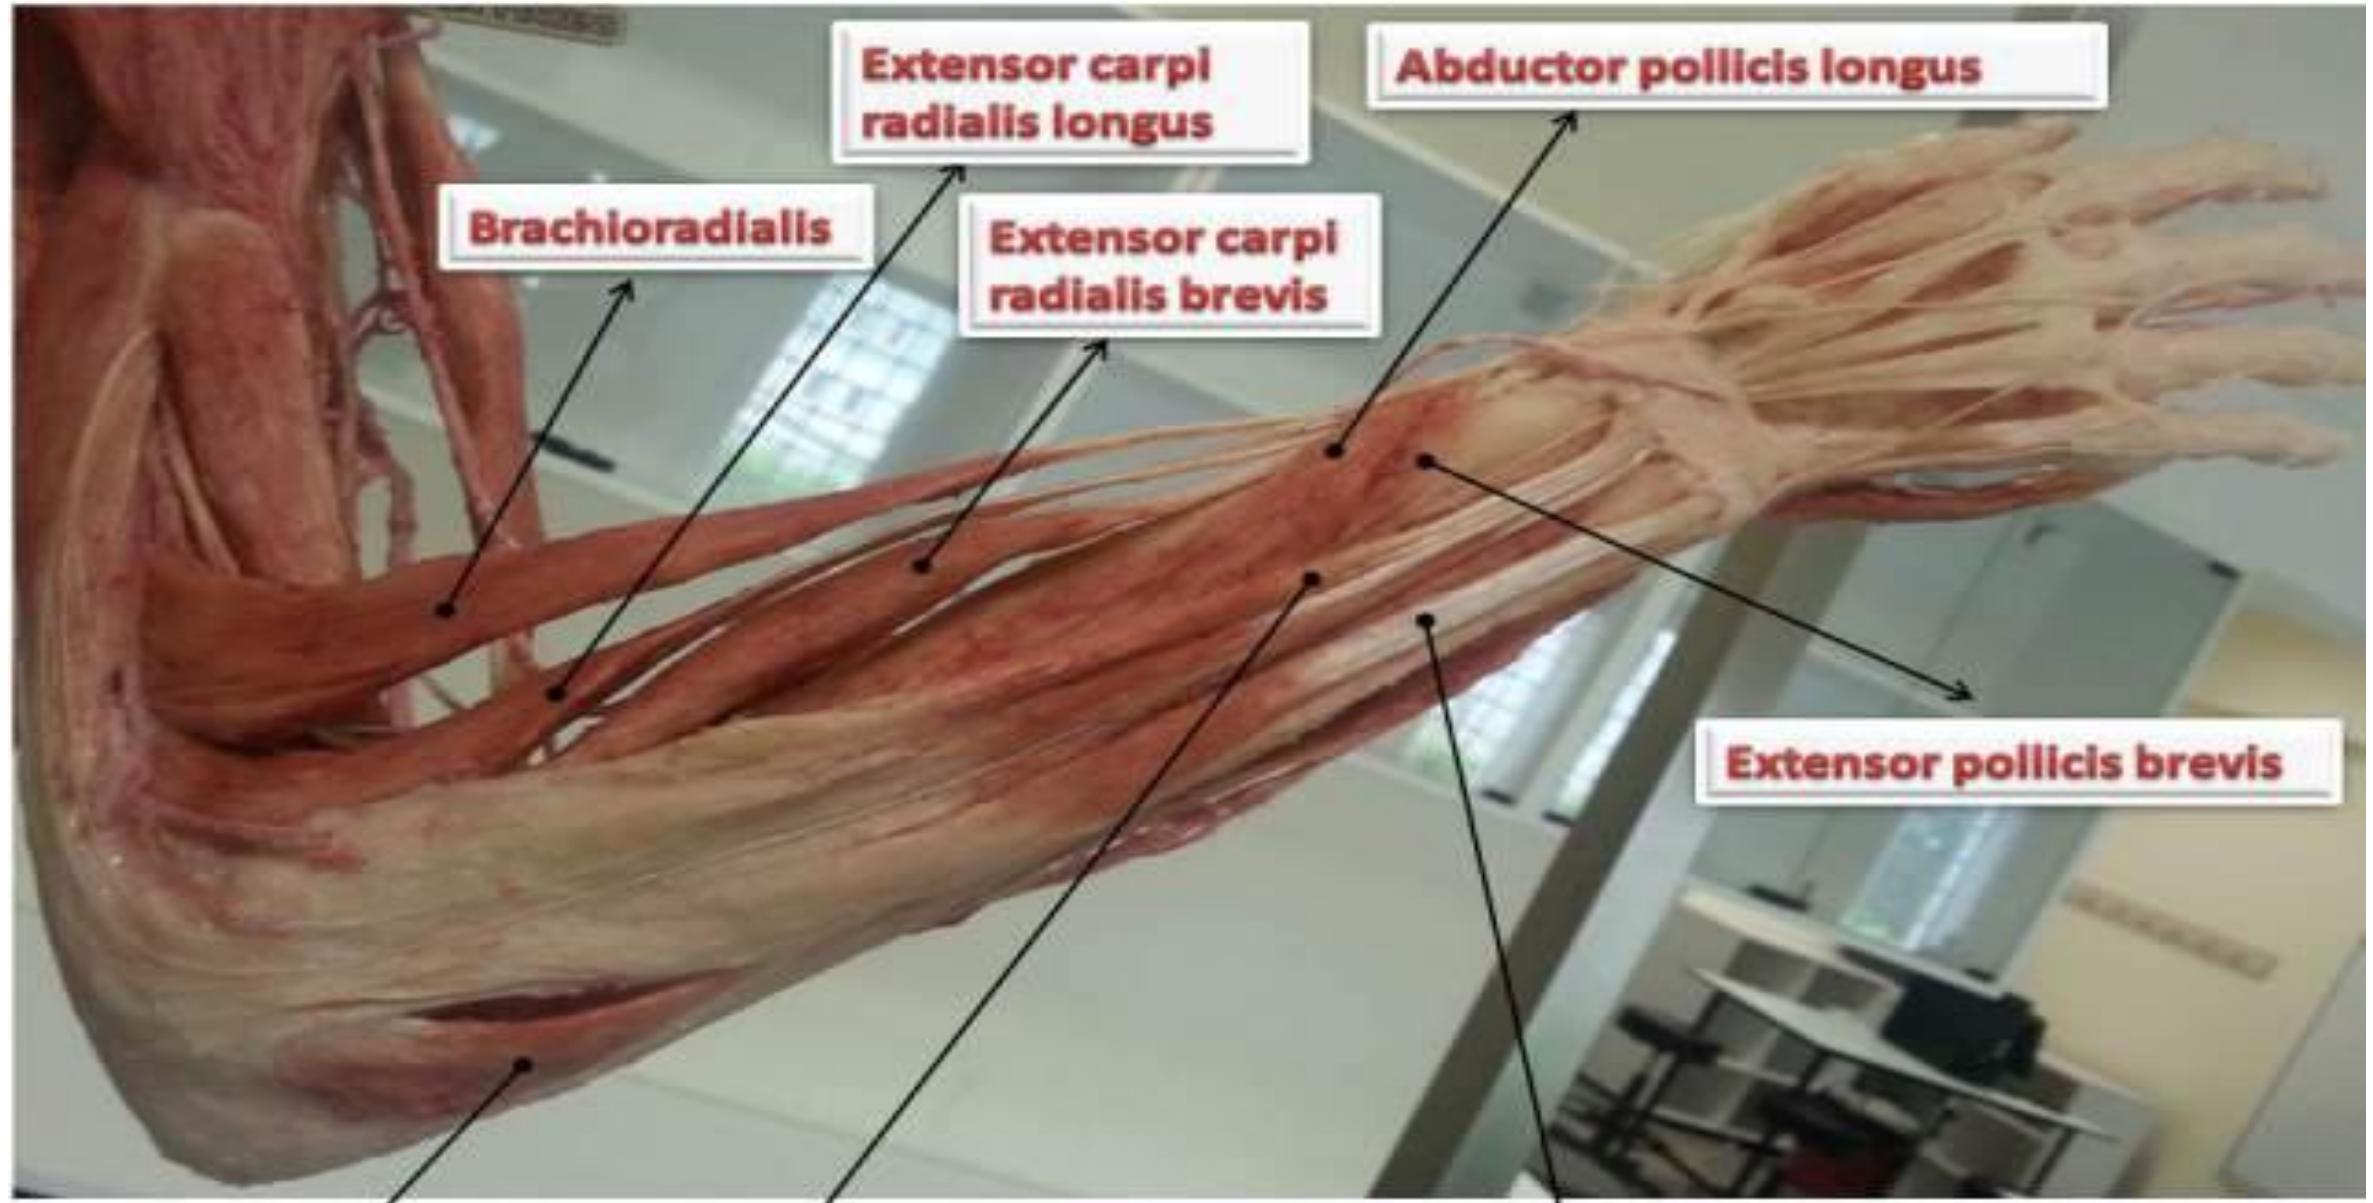

- It helps in extension of elbow.

Anatomy of the Anconeus Muscle

It inserts into the olecranon of the ulna as well as the proximal ulna.

ANCONEUS MUSCLE

Extensor carpi
radialis longus

Brachioradialis

Extensor carpi
radialis brevis

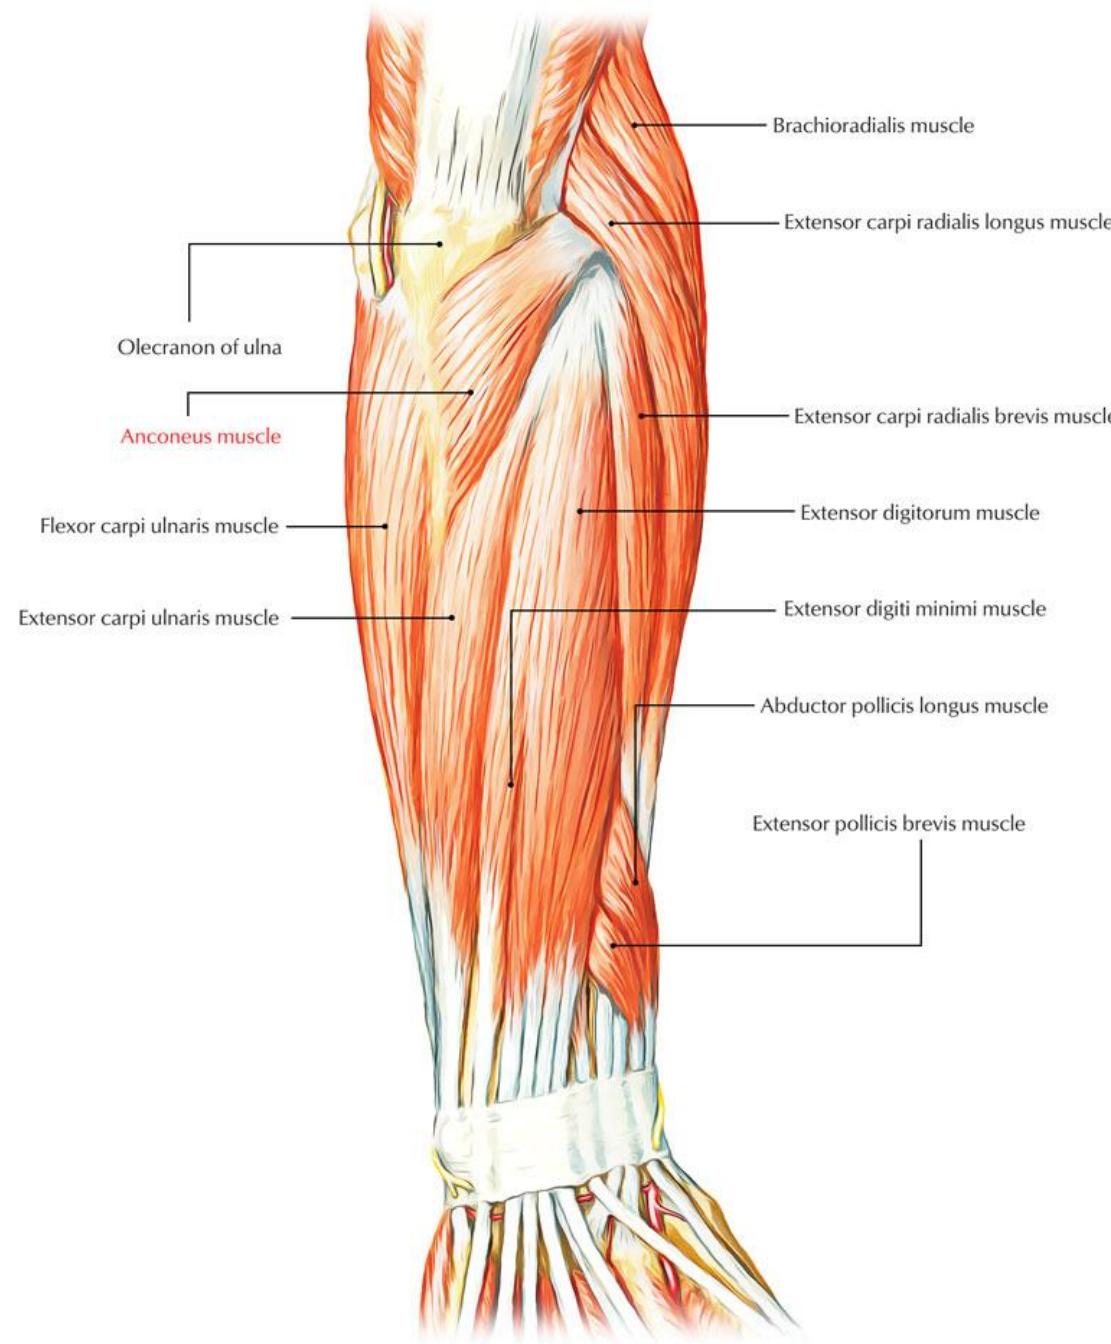

Abductor pollicis longus

Extensor pollicis brevis

Extensor digitorum

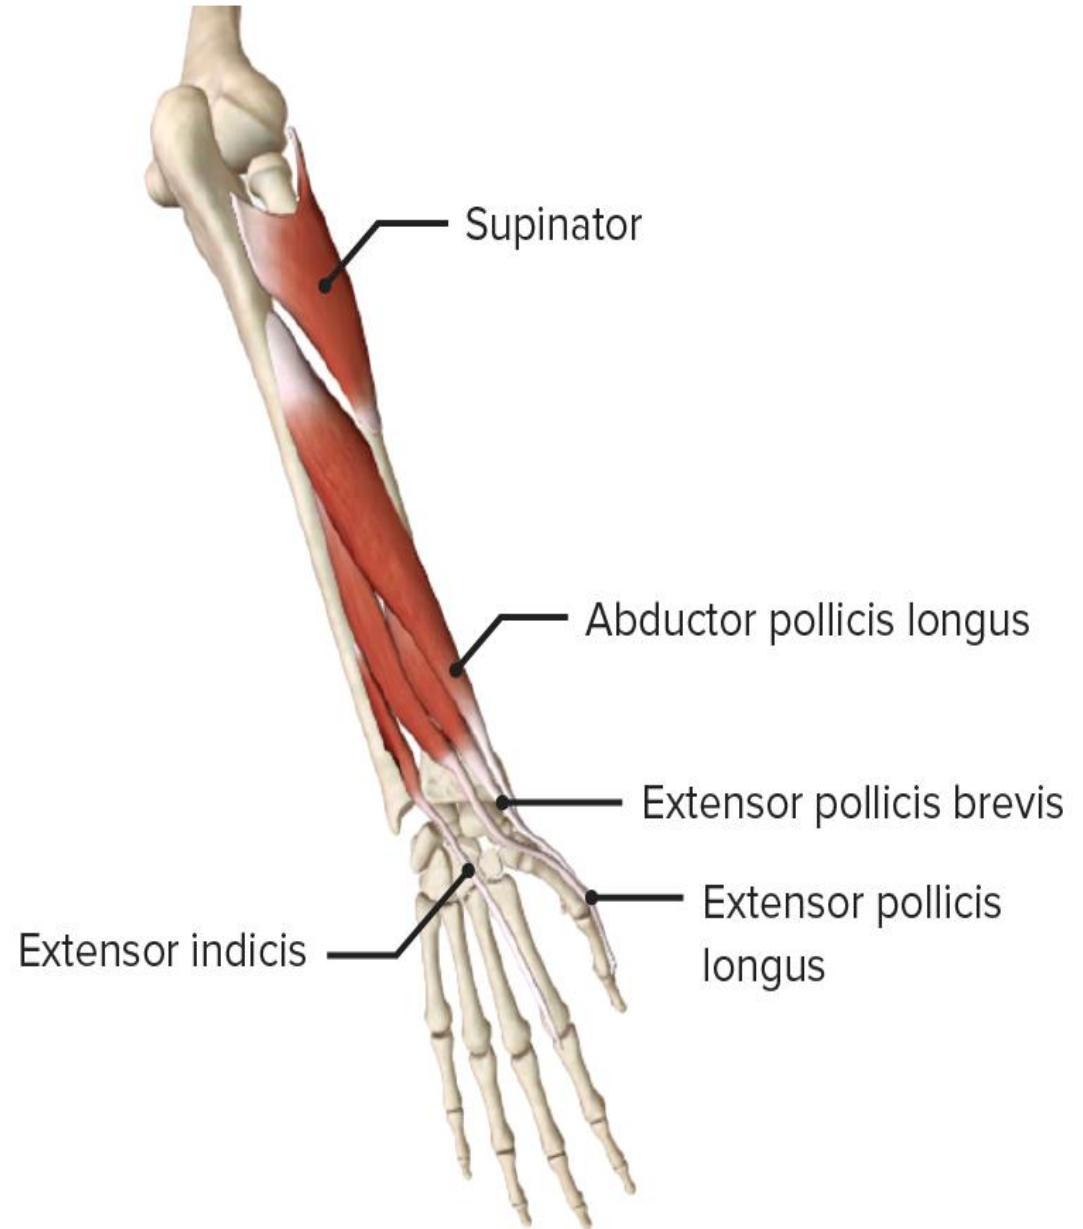

Anconeus

Extensor carpi ulnaris

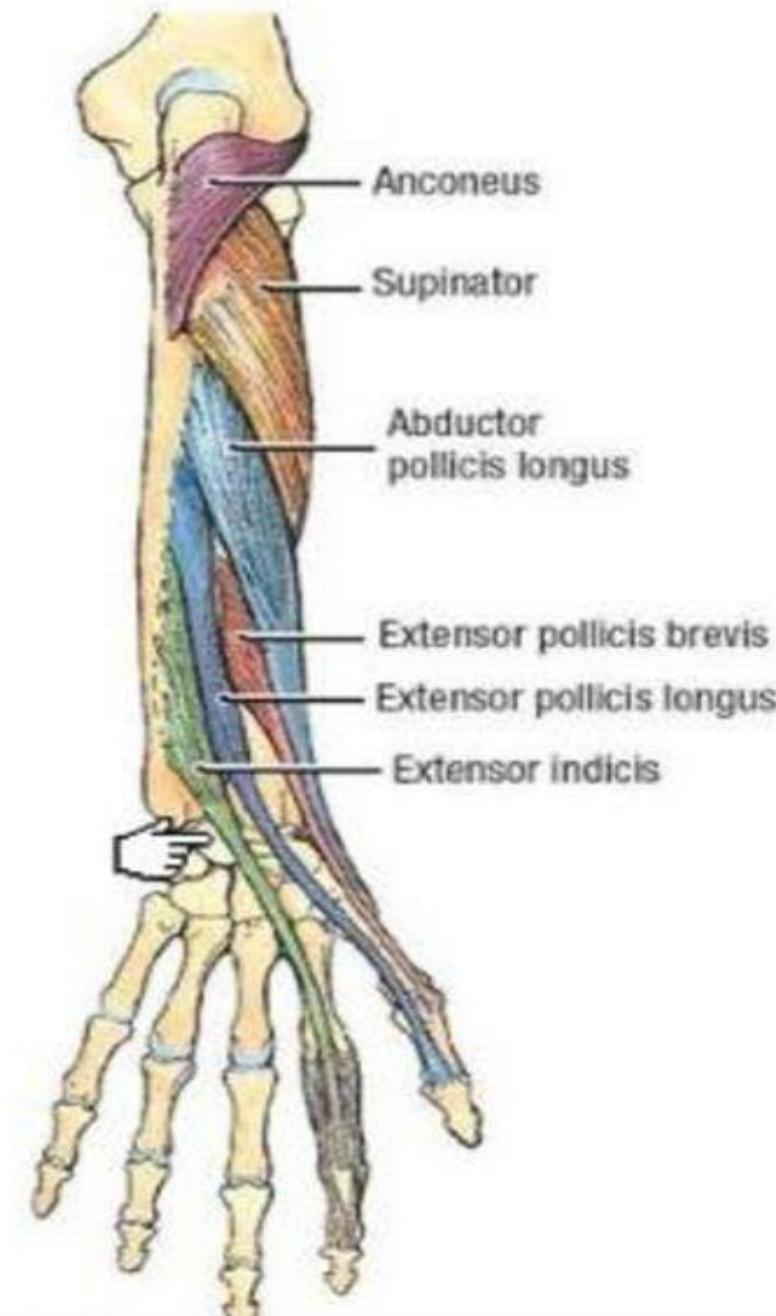

- II- Deep group of extensor muscles:

1. Supinator.
2. Abductor pollicis longus.
3. Extensor pollicis brevis.
4. Extensor pollicis longus.
5. Extensor indicis.

- Except for the supinator muscle, all these deep layer muscles originate from the posterior surfaces of the radius, ulna, and interosseous membrane and pass into the thumb and fingers.
- All muscles of the deep layer are innervated by the posterior interosseous nerve, the continuation of the deep branch of the radial nerve.

1- Supinator:

Origin:

- Supinator crest and fossa in ulna.
- Lateral epicondyle of humerus.
- Lateral ligament of elbow joint.
- Annular ligament.

Insertion:

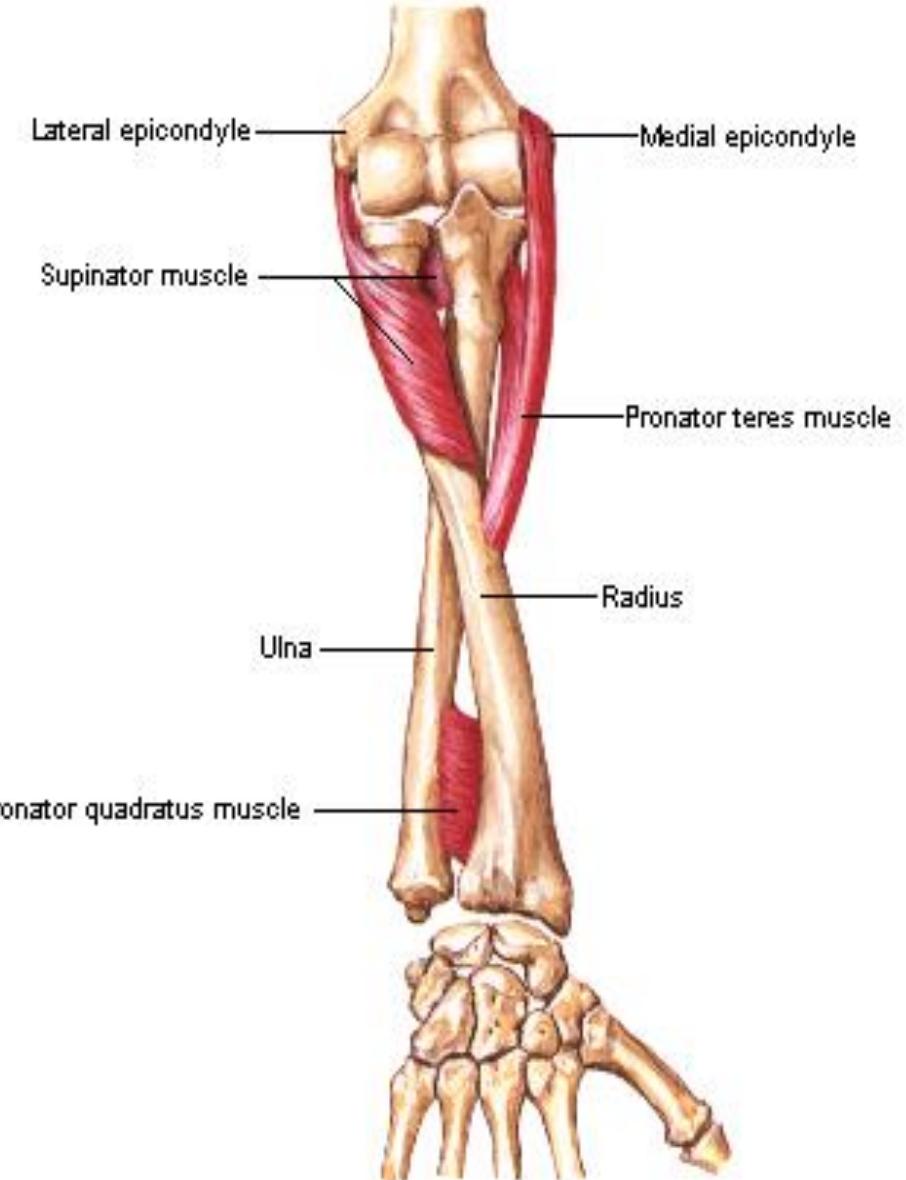

- Upper 1/3 of shaft of radius.

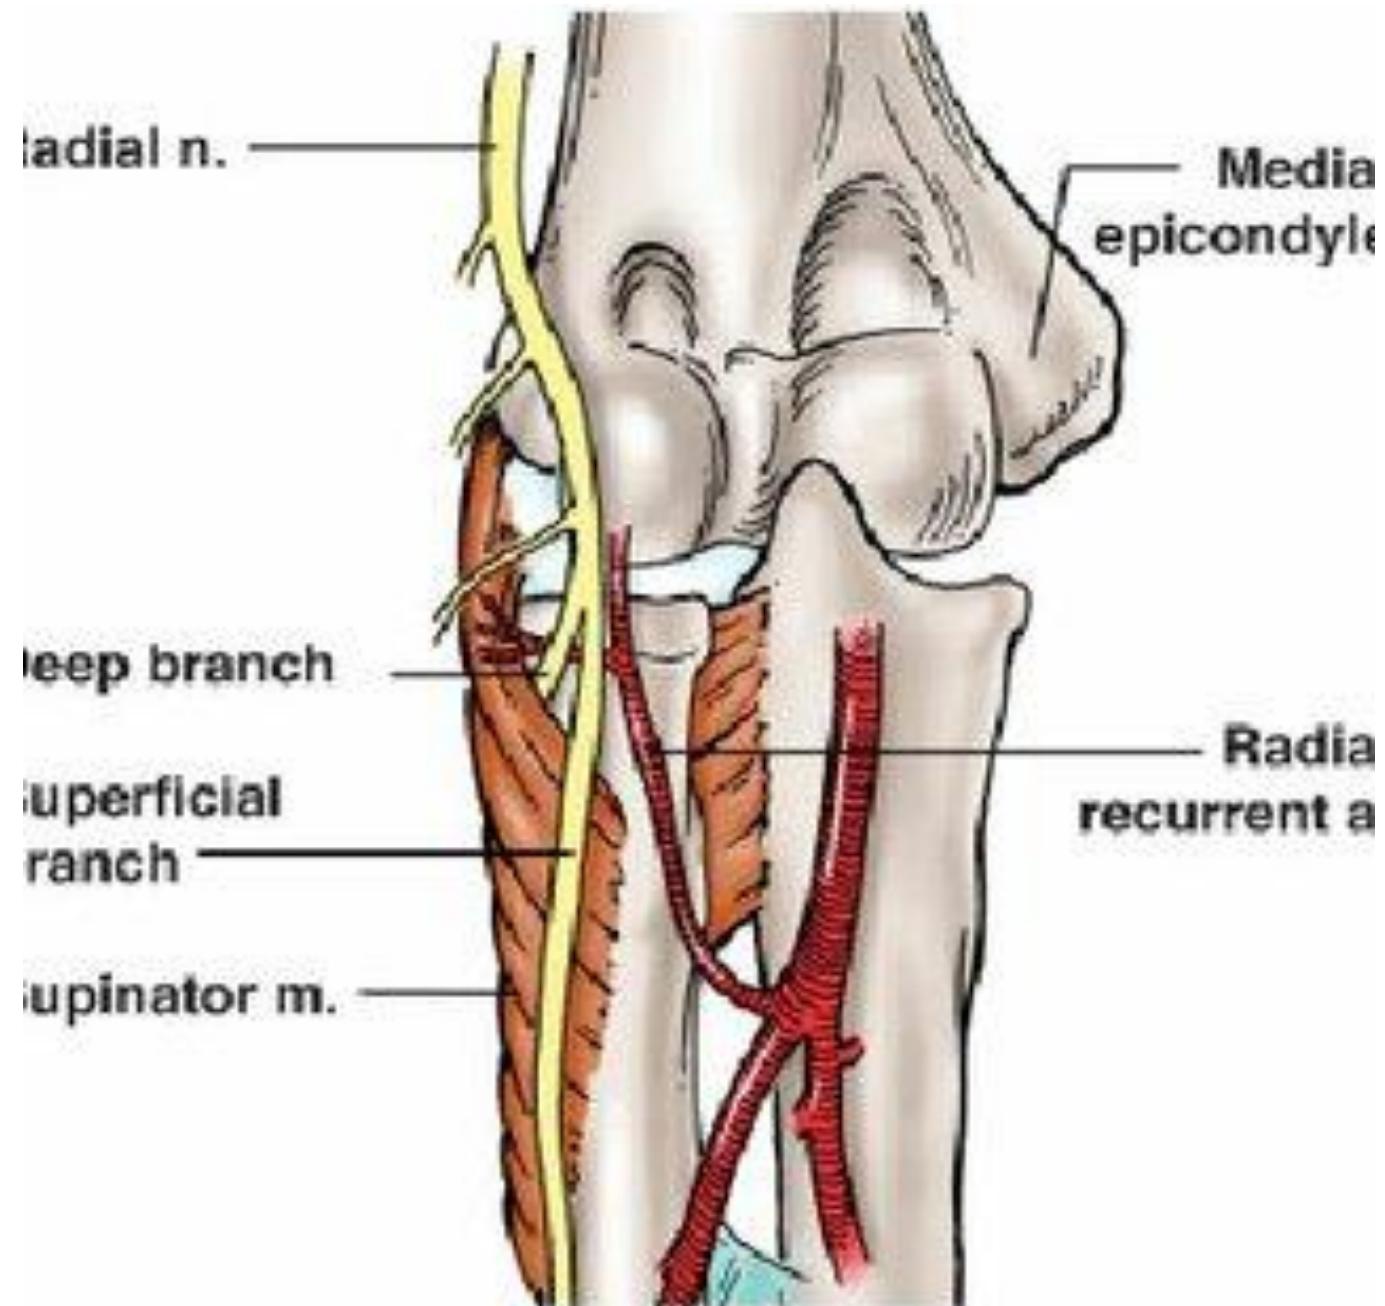

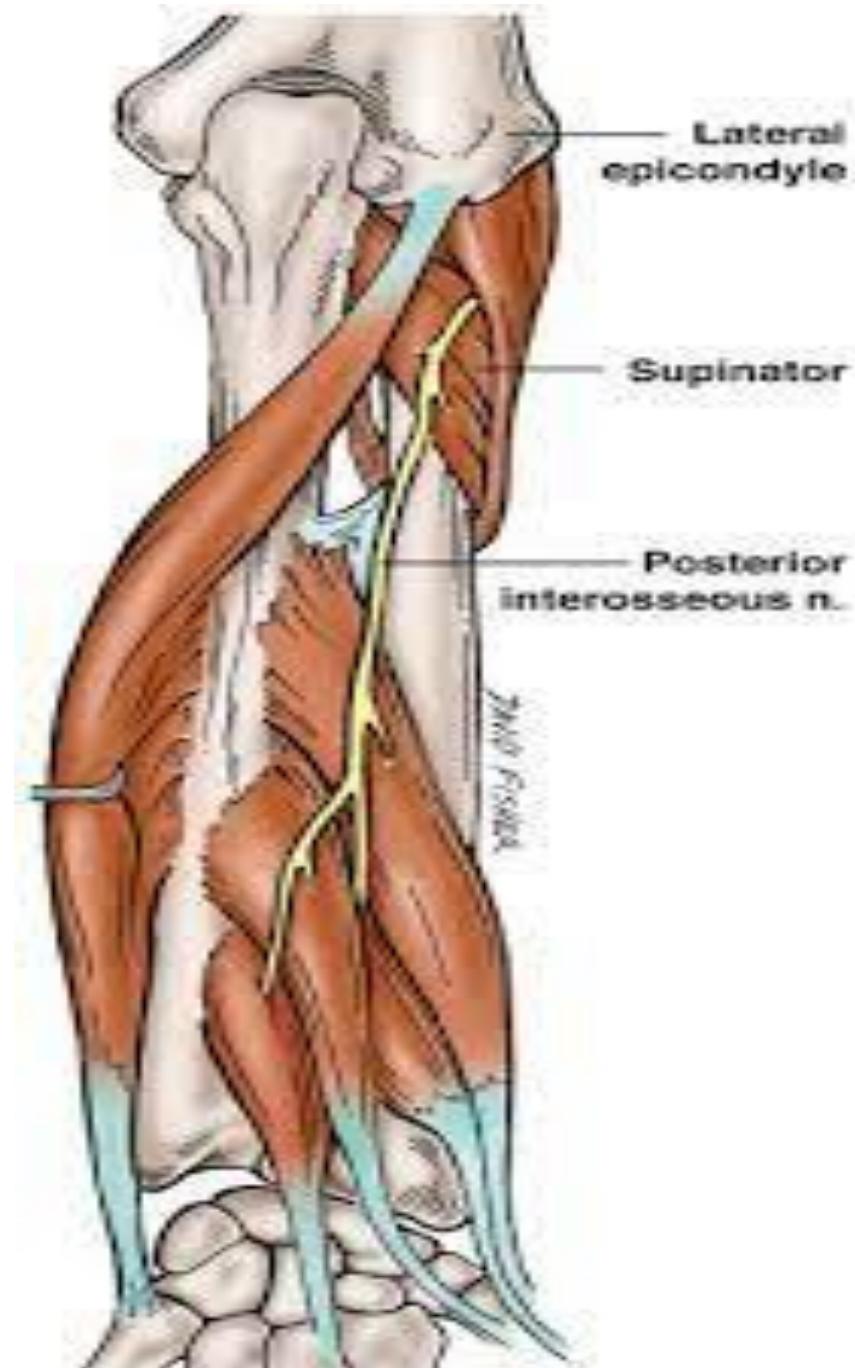

Nerve supply:

- Posterior interosseous nerve.

Action:

- Supination of the forearm.

2- Abductor pollicis longus

Origin:

- Posterior surface of ulna.
- Posterior surface of radius.
- Interosseous membrane.

Insertion:

- Posterior surface of the base of 1st metacarpal bone.

Nerve supply:

- Posterior interosseous nerve.

Action:

- Abduction of the thumb.

Helps in Extension of the thumb at the carpometacarpal joint.

Abductor Pollicis Longus

REHAB
My Patient.com

3- Extensor pollicis brevis

Origin:

- Posterior surface of radius
- Interosseous membrane.

Insertion:

- Proximal phalanx of the thumb.

Nerve supply:

- Posterior interosseous nerve.

Action:

- Extension of metacarpophalangeal and carpometacarpal joints of the thumb

4- Extensor pollicis longus:

Origin:

- Posterior surface of ulna
- Interosseous membrane.

Insertion:

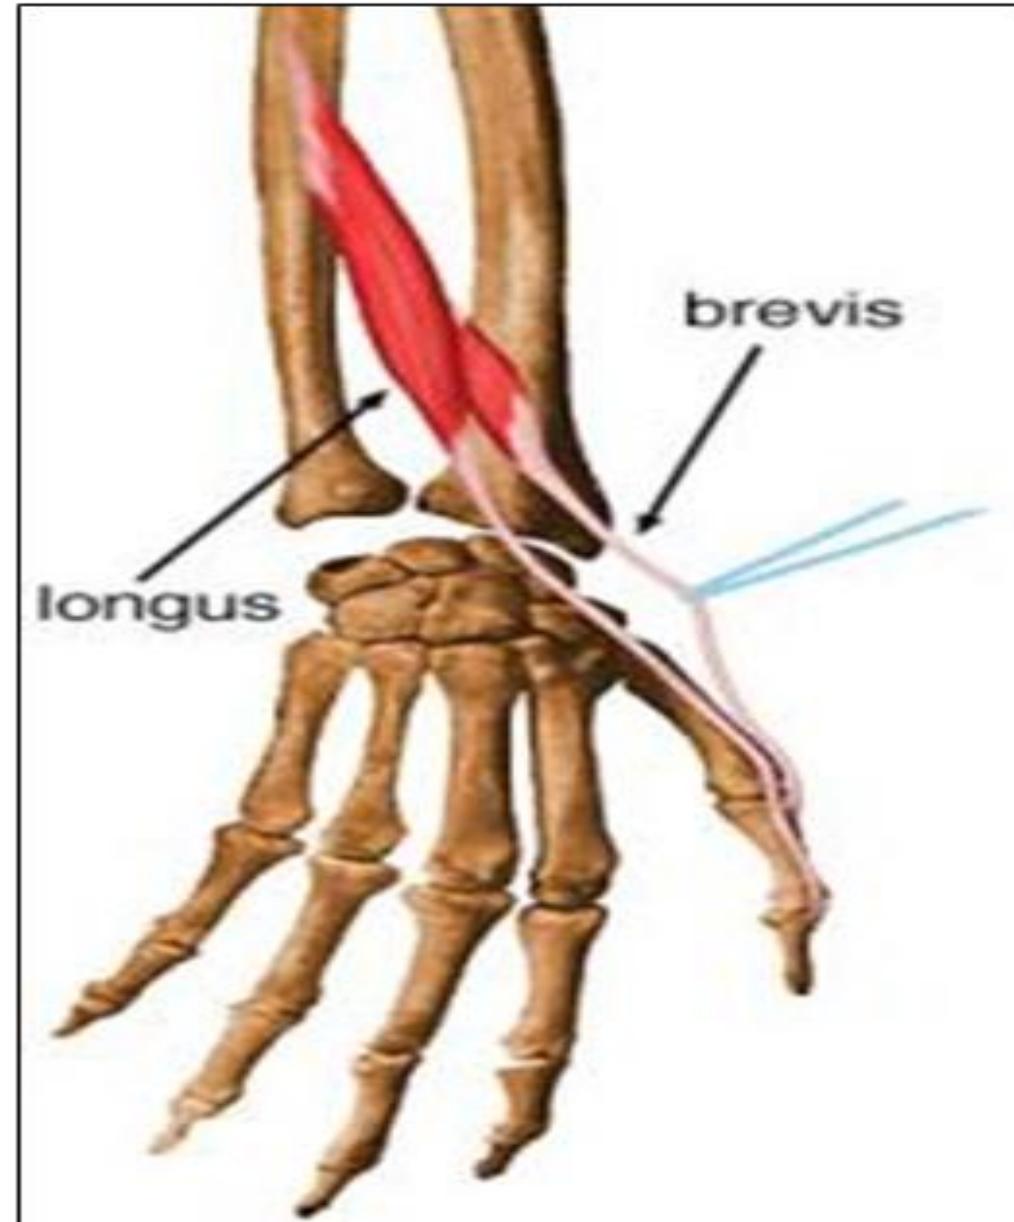

- Distal phalanx of the thumb.

Nerve supply:

- Posterior interosseous nerve.

Action:

- Extension of all joints of the thumb.

5- Extensor indicis

- **Origin:**

- Posterior surface of ulna
- Interosseous membrane.

- **Insertion:**

- Extensor expansion of the index finger.

- **Nerve supply:**

- Posterior interosseous nerve.

- **Action:**

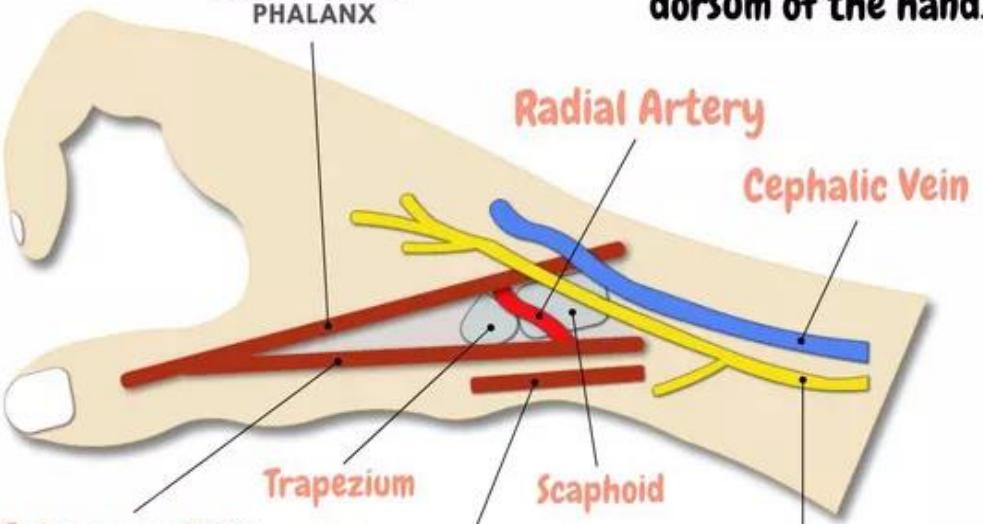

- Extension of all joints of index finger.

SNUFF BOX

Extensor pollicis longus muscle
BASE OF DISTAL PHALANX

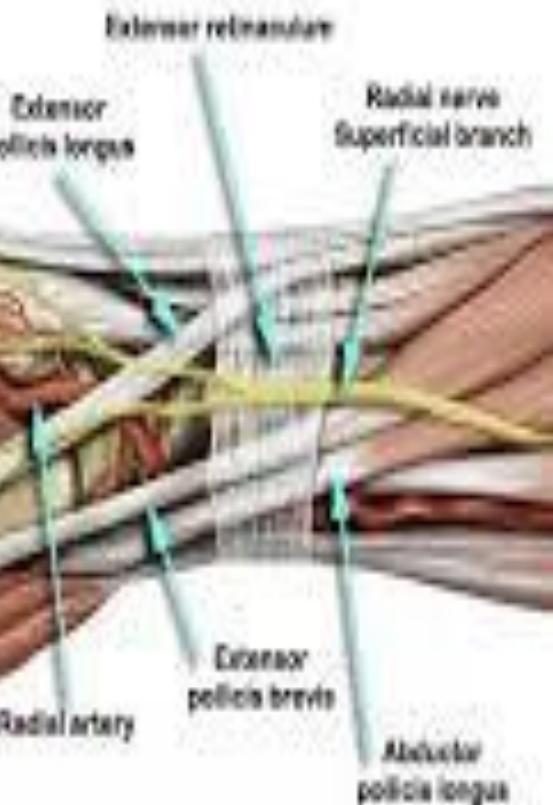

Triangular depression found
on the lateral aspect of the
dorsum of the hand.

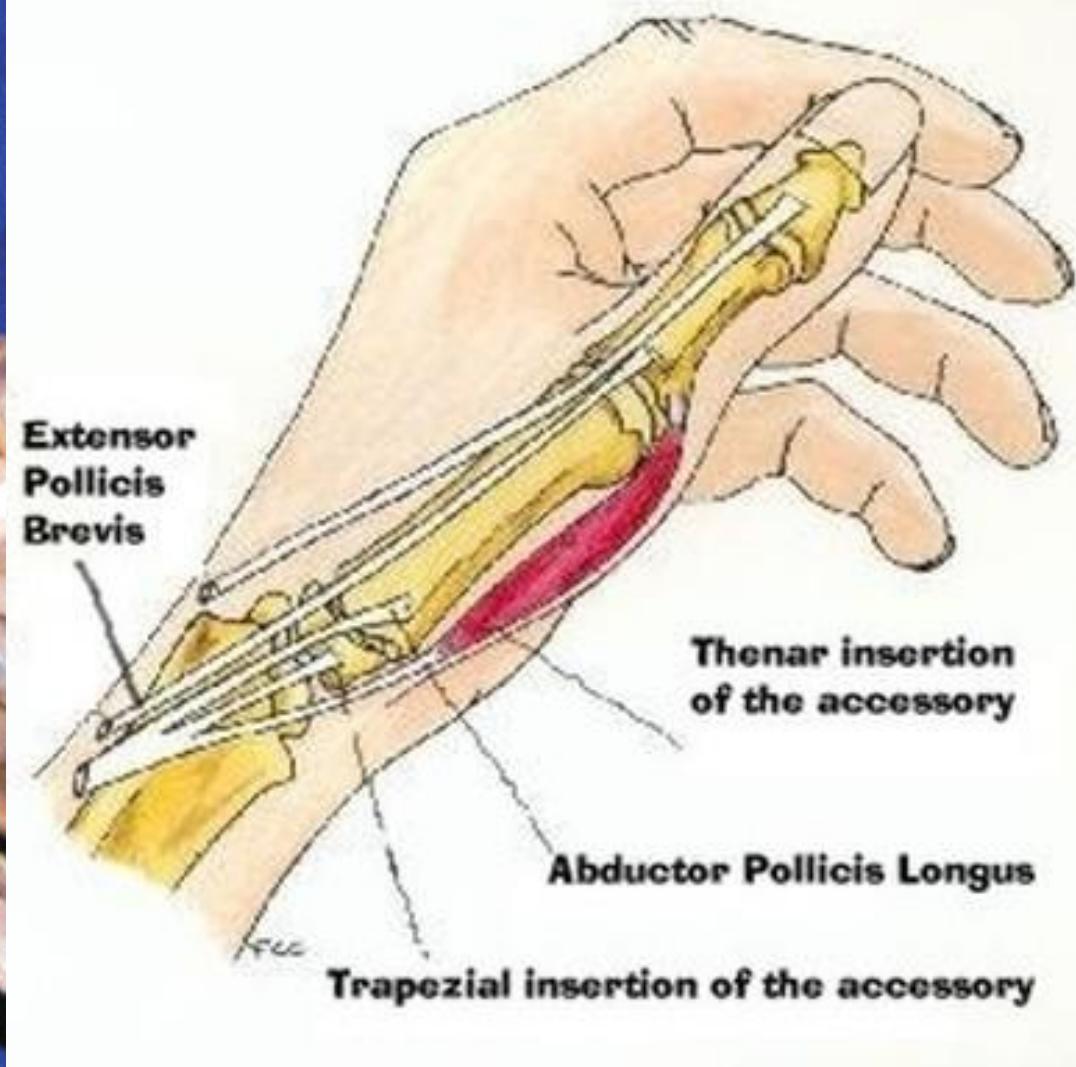

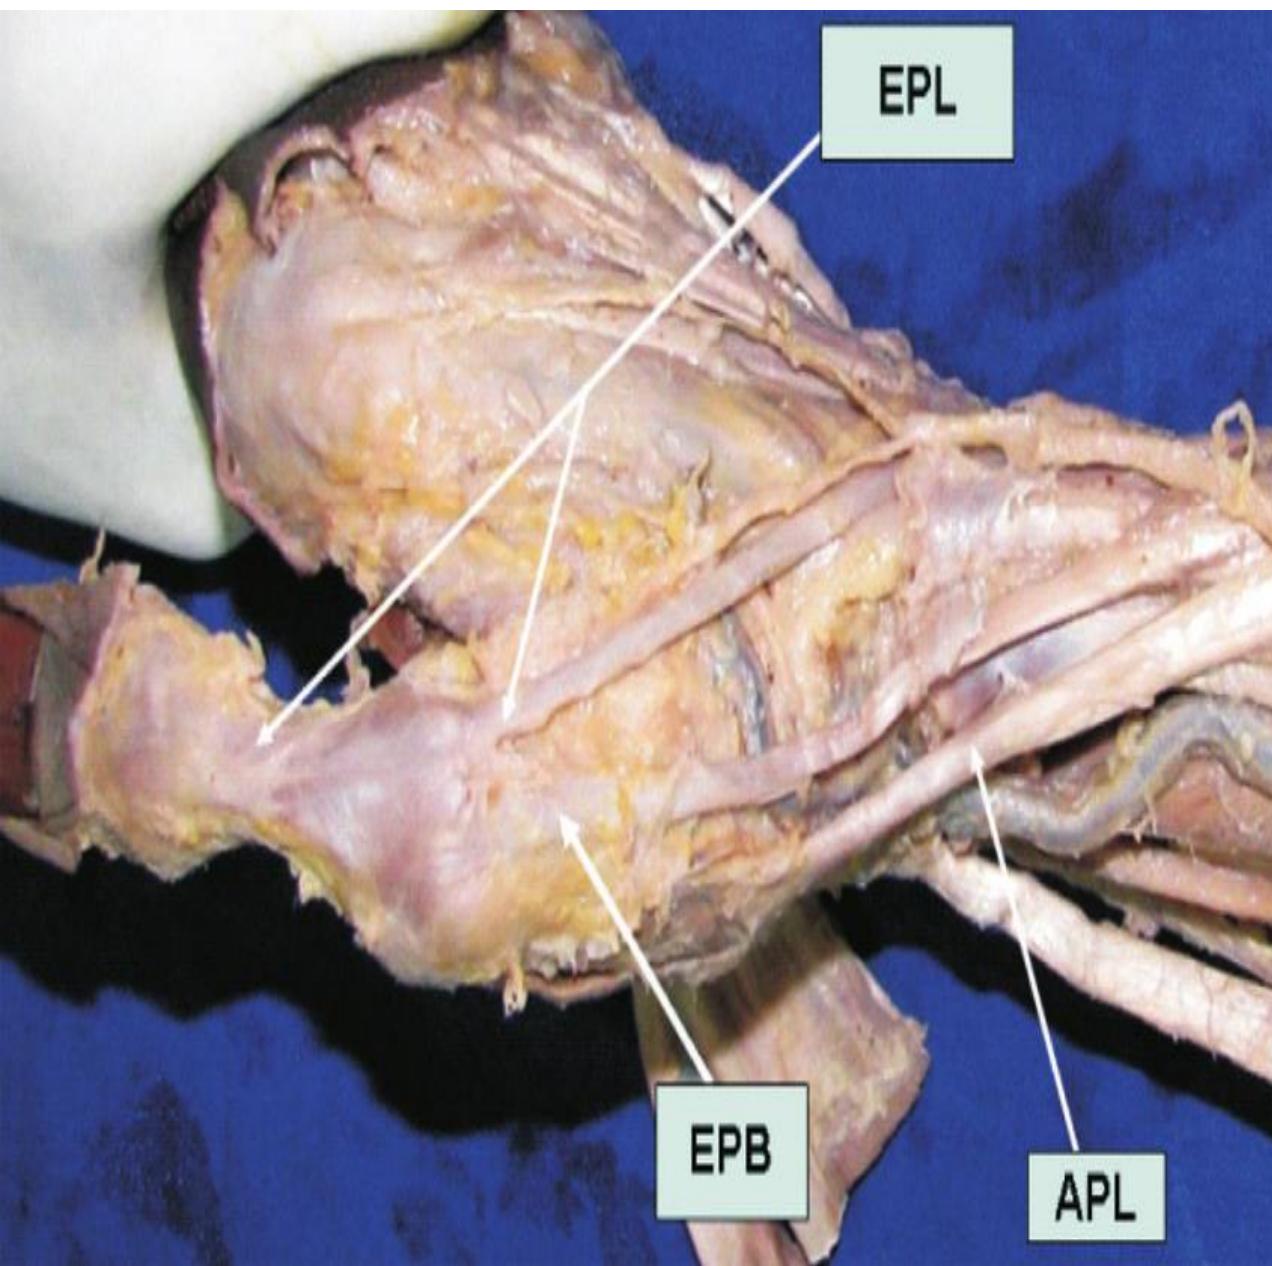

Extensor pollicis
brevis muscle
BASE OF PROXIMAL
PHALANX

Abductor pollicis
longus muscle
BASE OF 1ST
METACARPAL

Superficial branch
of Radial nerve

Extensor retinaculum

- Thickened band of fascia
- Runs across the back of wrist

Attachment-

- laterally to lower part of anterior border of radius
- Medially it is attached to triquetral & pisiform
