

"orthopedic archive"

⇒ *Anatomy* you should know (blood supply /nerve /orgin / insertion/action).

اللي اجا

Lower limb

- (archive) obtrature internus muscle

upper limb

- levator scapula muscle

Salter harries type 4 ,all true except?

- type 1 usually clinical diagnosis

- type2 Most Common

- type 4 pass throught 4 bony part ✓

- type 5 may be present late

All choice favor AcL ligament more than mensicus, except?

- Mechansim non contact injury

- swelling more than one day ✓

- anterior withdrawal test

- Hearing pop at time of injury

Dr alaa aqel (archive حرفي)

- Down-hill

- knee jerk (L3)

[Photo] Tumor ;

⇒ •Drop wrist--- shaft humerus fx

⇒ •Burst fx

⇒ •Segmental fx

⇒ •Lisfranc fx --- ORIF

⇒ •85 y/o female -- hip fx --- negative effect risk of mortality (i think "fixation beyond 48 hr")

⇒

- Looser fx
- Normal ca
Associated wt medical conditions

مش عارفه شو طبيعة السؤال بالزبط

بس اعتقد بده الجملة الخطأ

Buckle fx no need reduction

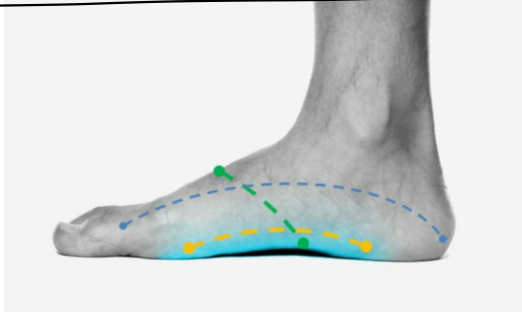

Greenstick fx in upper or lower limb

Supracondylar fx due to indirect trauma

..... radius extraarticular كان في خيار الة علاقه

Which mc in proximal radius fx

Extra or intra articular :::

السؤال هان شو العوامل اللي بتساعد ف archs يظل ثابت فمحلّه، except.

- Planter fascia
- bony structure
- Peronus brevis muscle
- Posterio tibial muscle ✓
