Pancreas

اليو تيوب د. يوسف حسين

[Prof. Dr. Youssef Hussein Anatomy - YouTube](#)

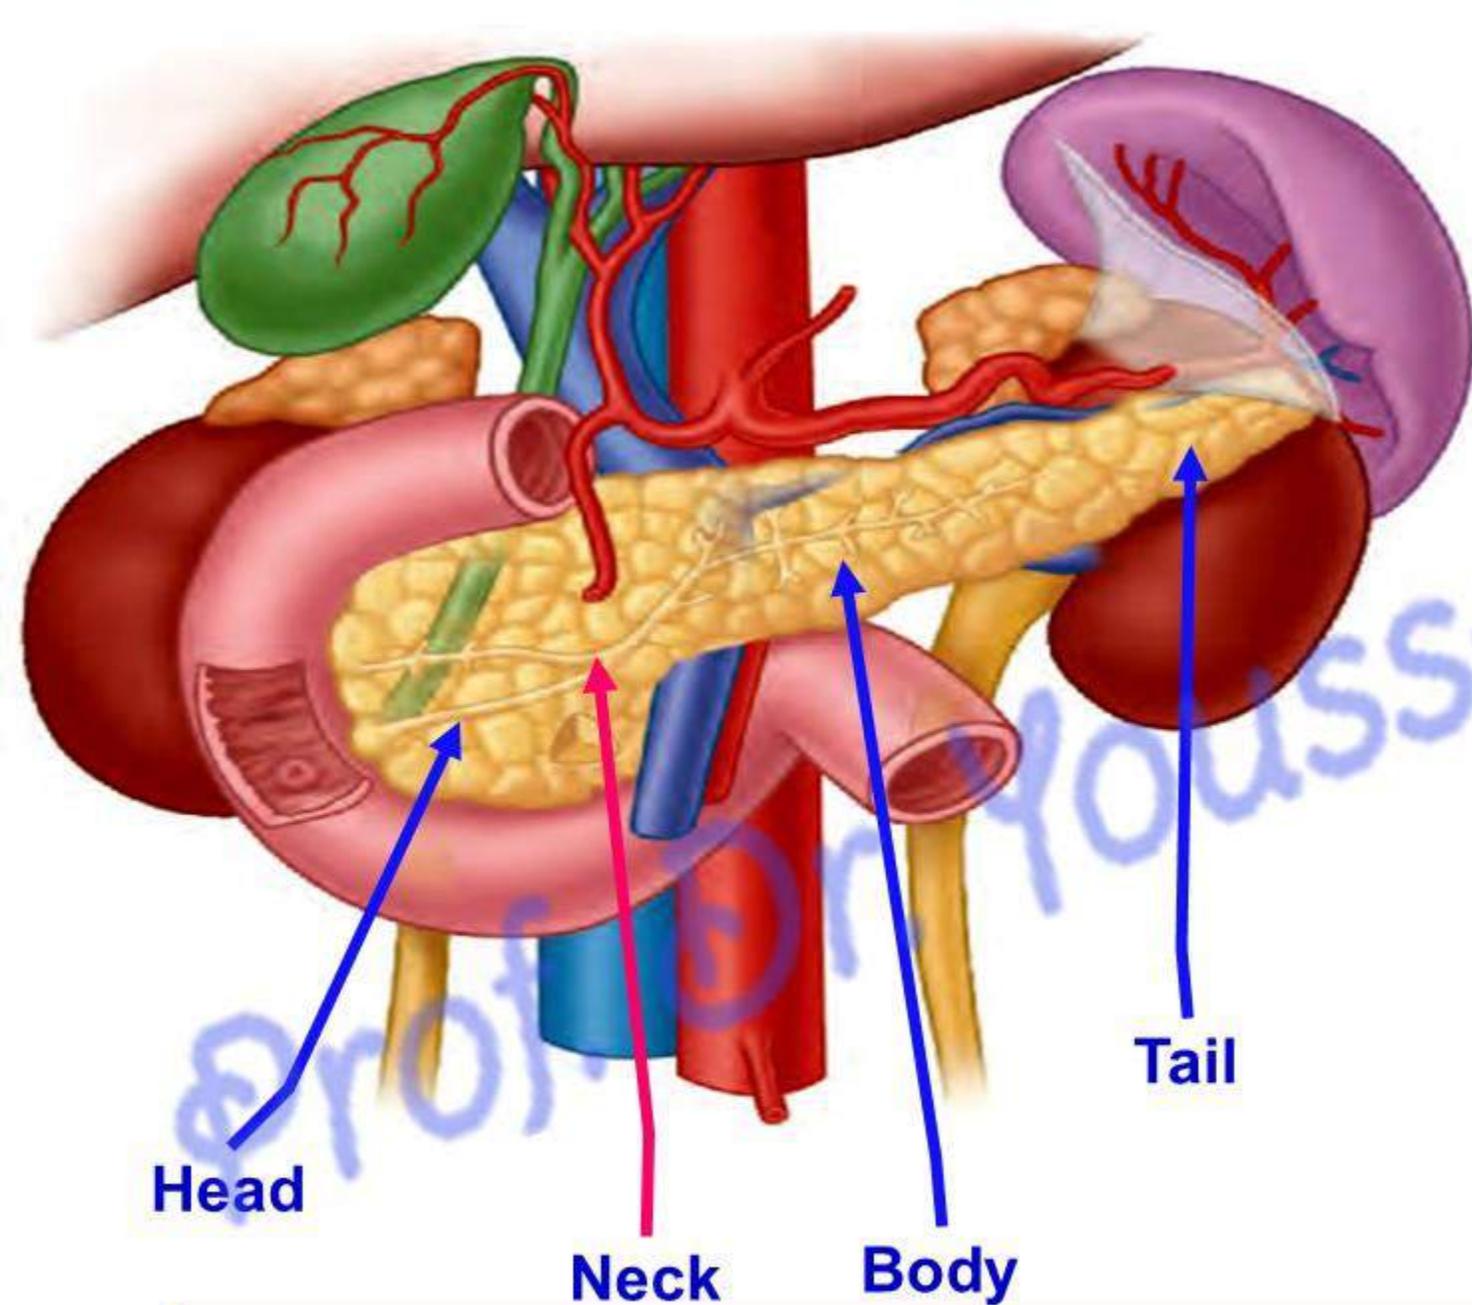

• Pancreas

** It is a combined exocrine and endocrine gland (mixed)

** **Position**, it lies transversely across posterior abdominal wall.

- It **extends from duodenum** (right) to the spleen (left), with a slight **upward inclination** from the right to the left sides.

اليو تيوب د. يوسف حسين

**** Parts of pancreas**

**** Peritoneal covering**

It is retroperitoneal except its tail completely covered by peritoneum (lienorenal ligament)

اليوثيوب د. يوسف حسين

** Surface anatomy

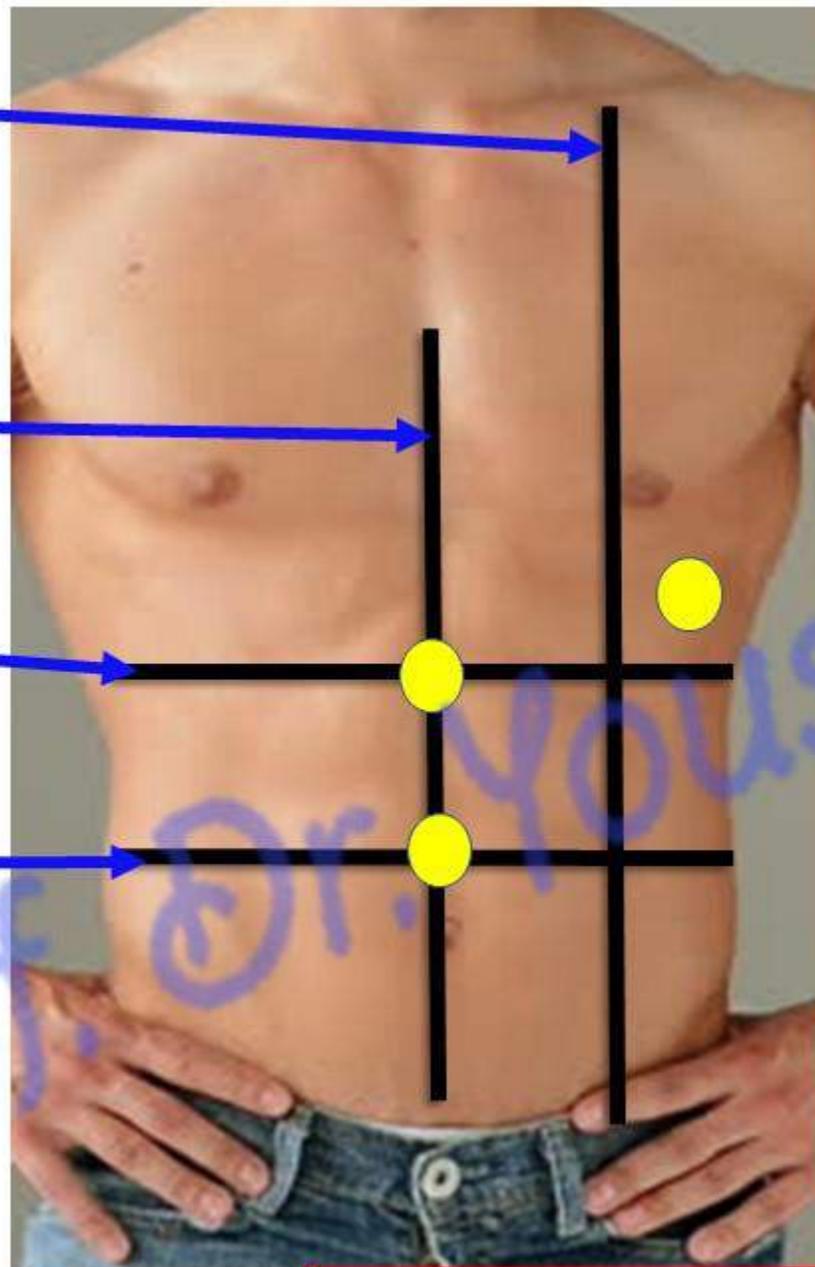

- 1- **Head** in the concavity of duodenum.
- 2- **Neck** on transpyloric plane (L1), behind the pylorus of stomach.
- 3- **Body and tail:** It is represented by a triangle as follows:
 - **Point (1)** at crossing transpyloric plane (L1) with the median plane.
 - **Point (2)** at crossing subcostal plane (L3) with the median plane.
 - **Point (3)** left and superior to point of crossing transpyloric plane with left midclavicular line.

Relations of Pancreas

اليوطيوب د. يوسف حسين

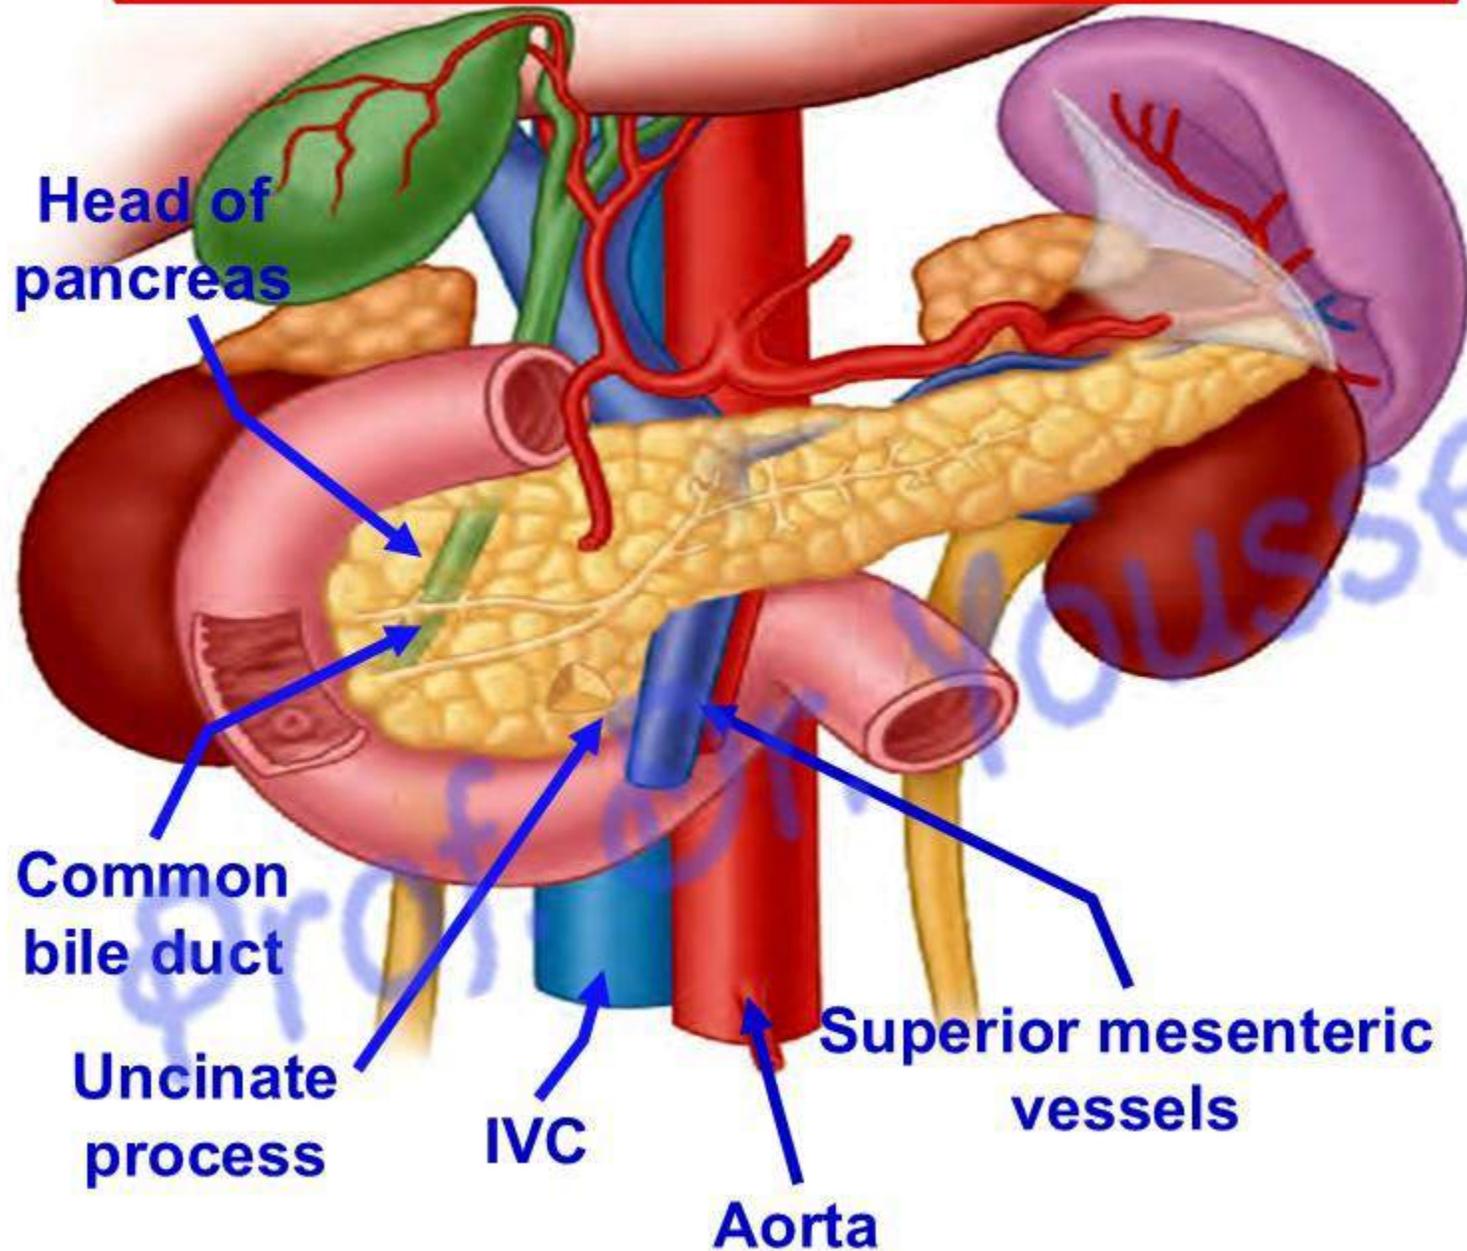

[Prof. Dr. Youssef Hussein Anatomy - YouTube](#)

• Head of Pancreas

- **Superiorly:** the 1st part of duodenum.
- **Inferiorly:** the 3rd part of duodenum.
- **Laterally:** the 2nd part of duodenum separated from it by superior and inferior pancreaticoduodenal vessels.

اليوطيوب د. يوسف حسين

• Head of Pancreas

- **Posteriorly:** common bile duct , IVC & two renal veins.
- **Anteriorly:** transverse colon & small intestine.

• Uncinate process

- **Posteriorly:** abdominal aorta.
- **Anteriorly:** Superior mesenteric vessels.

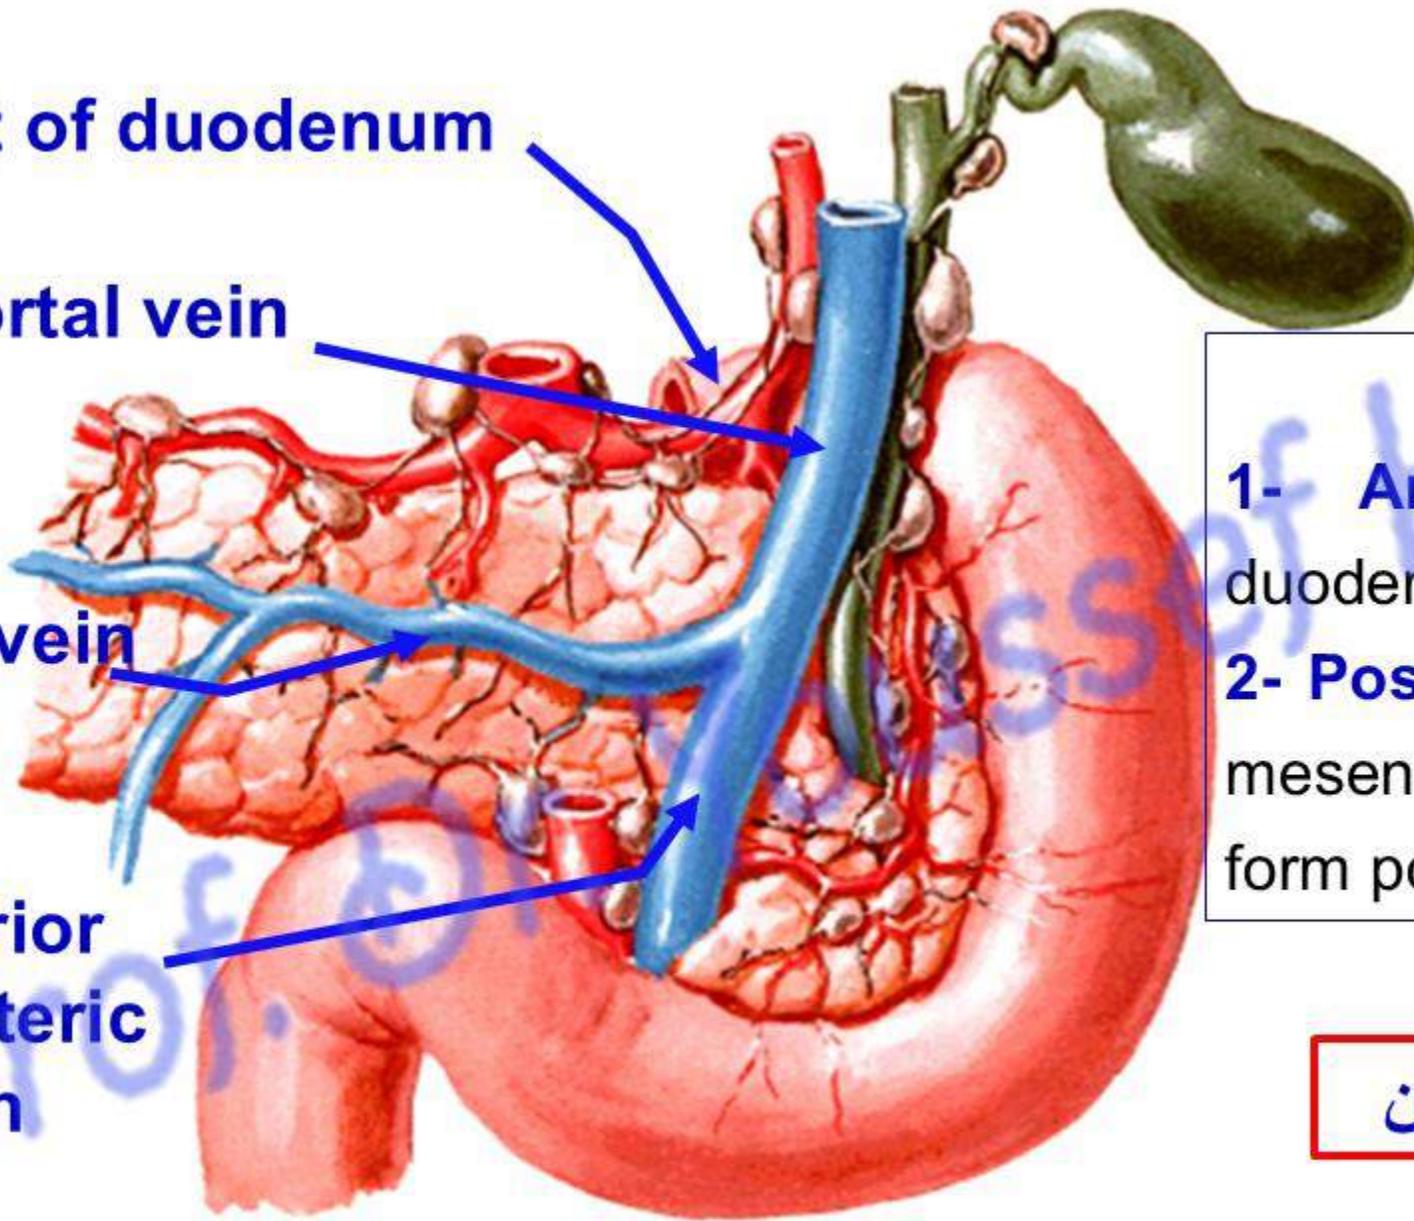

اليوتيوب د. يوسف حسين

1st part of duodenum

Portal vein

Splenic vein

Superior mesenteric vein

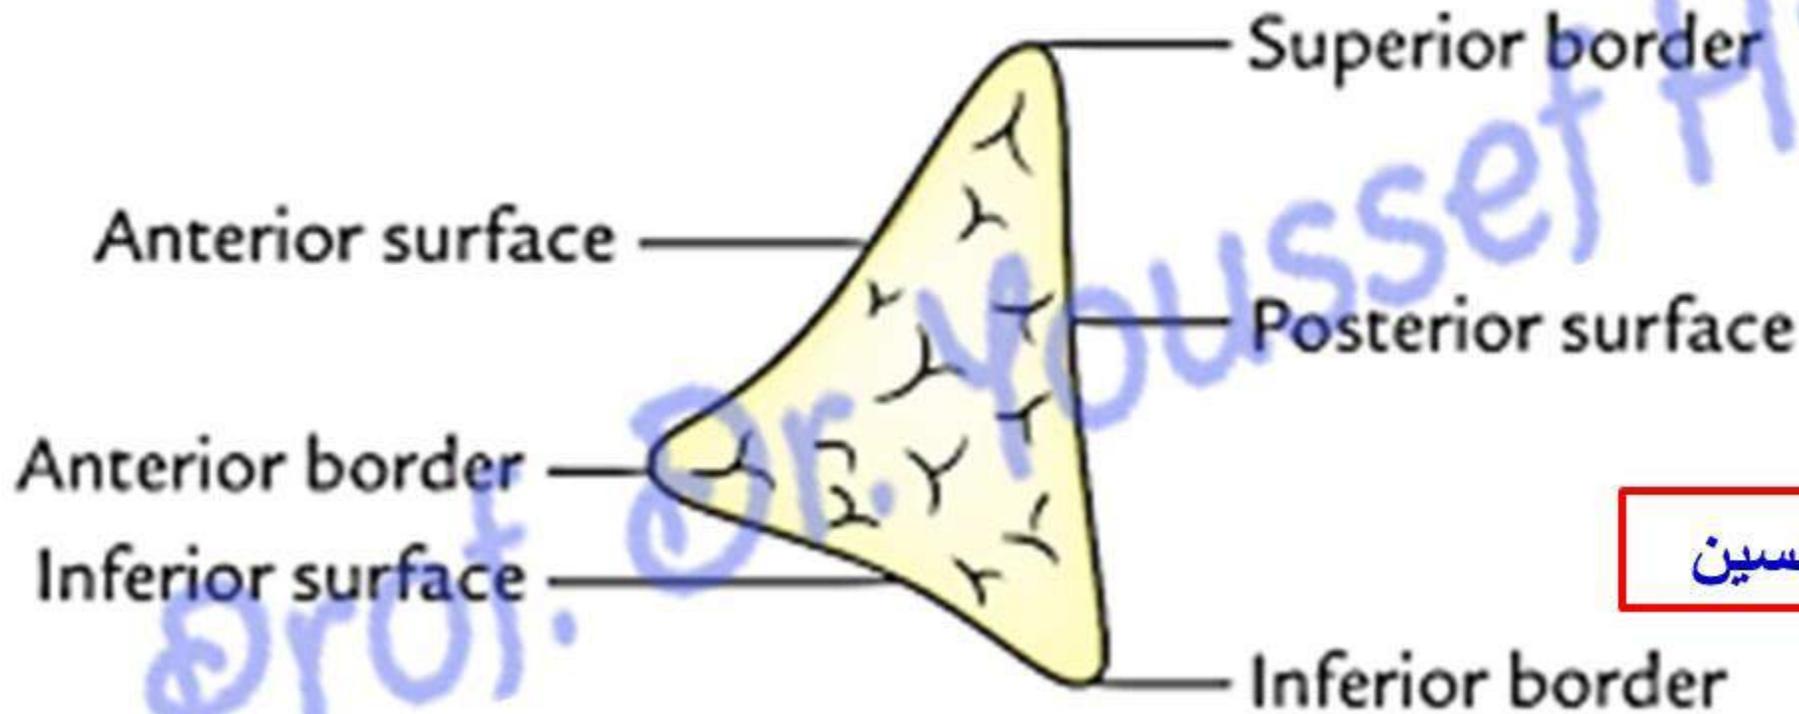

Neck of pancreas

1- **Anteriorly:** 1st part of duodenum.

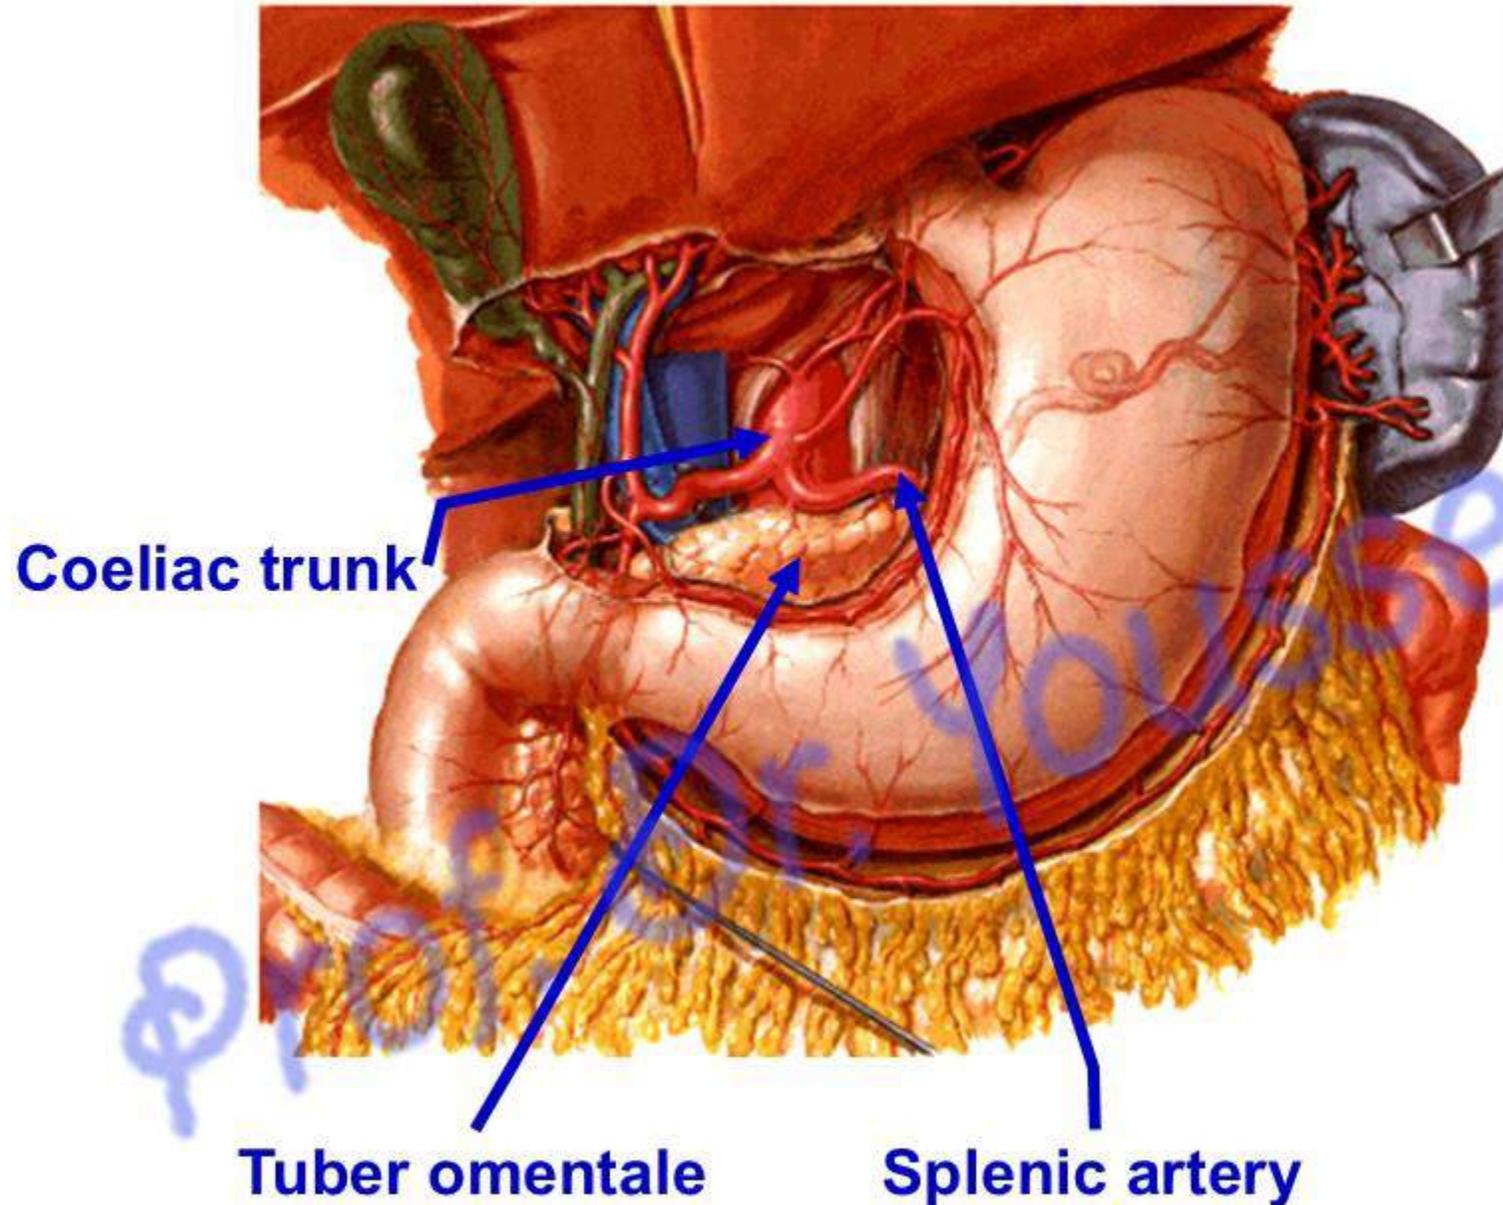

2- **Posteriorly:** union of superior mesenteric and splenic veins to form portal vein.

اليوتيوب د. يوسف حسين

- **Transverse section of the body of pancreas**

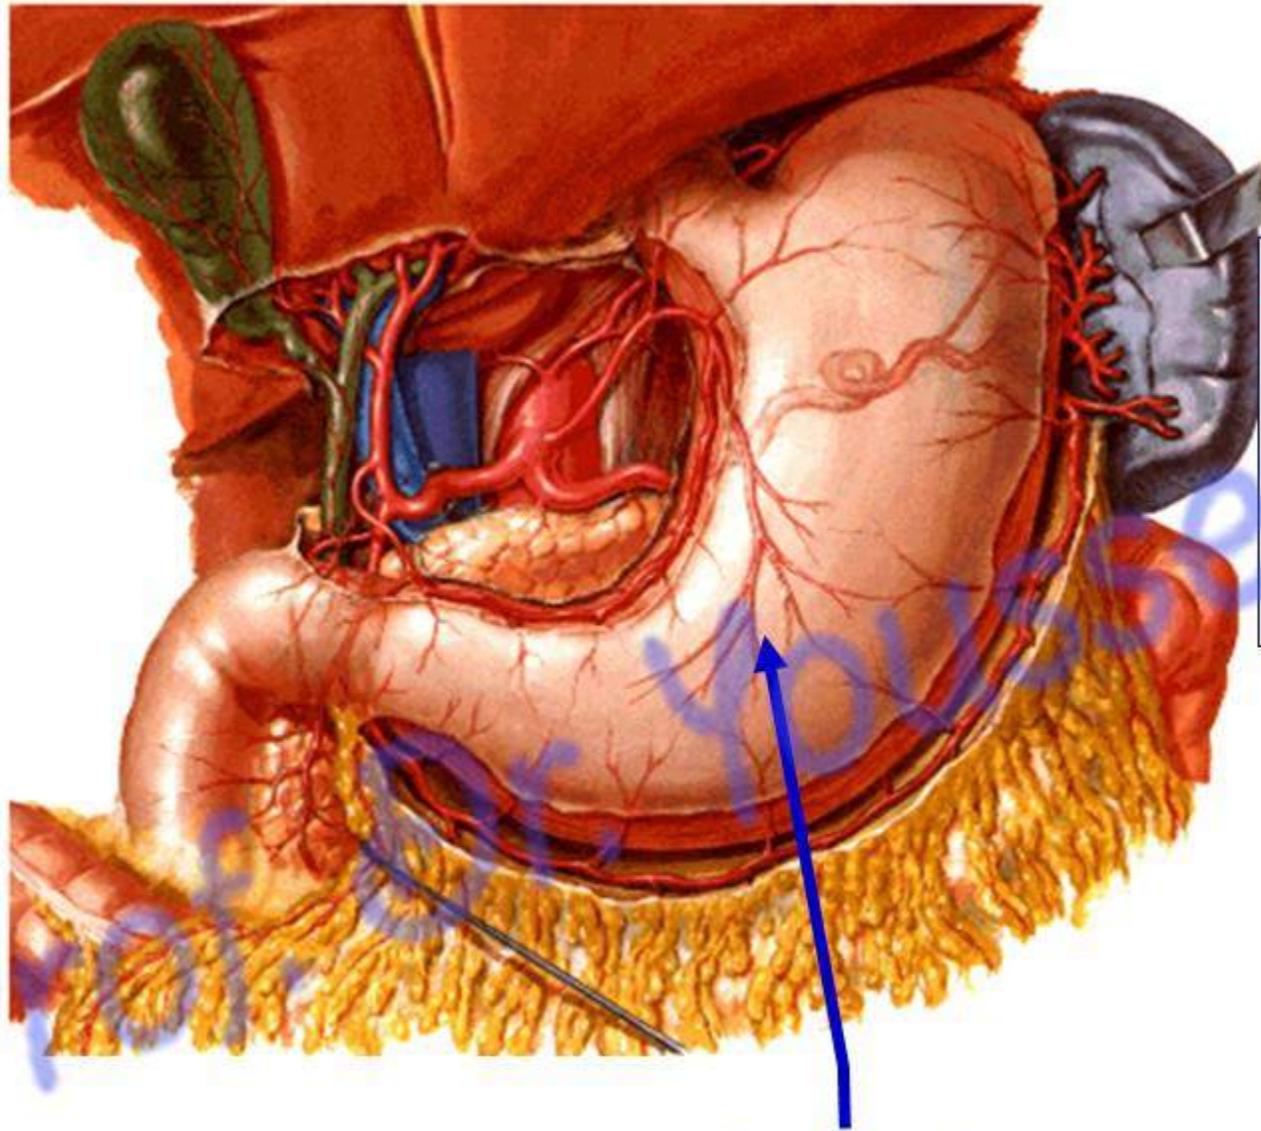

اليوطيوب د. يوسف حسين

- **Relations of superior border of body of pancreas**
- **Tortuous Splenic artery** passes on the superior border of pancreas
- **Tuber omentale of pancreas**, upward projection of superior border above level of lesser curvature of stomach which related to coeliac trunk.

اليوتيوب د. يوسف حسين

- **Relations of anterior surface of body of pancreas**

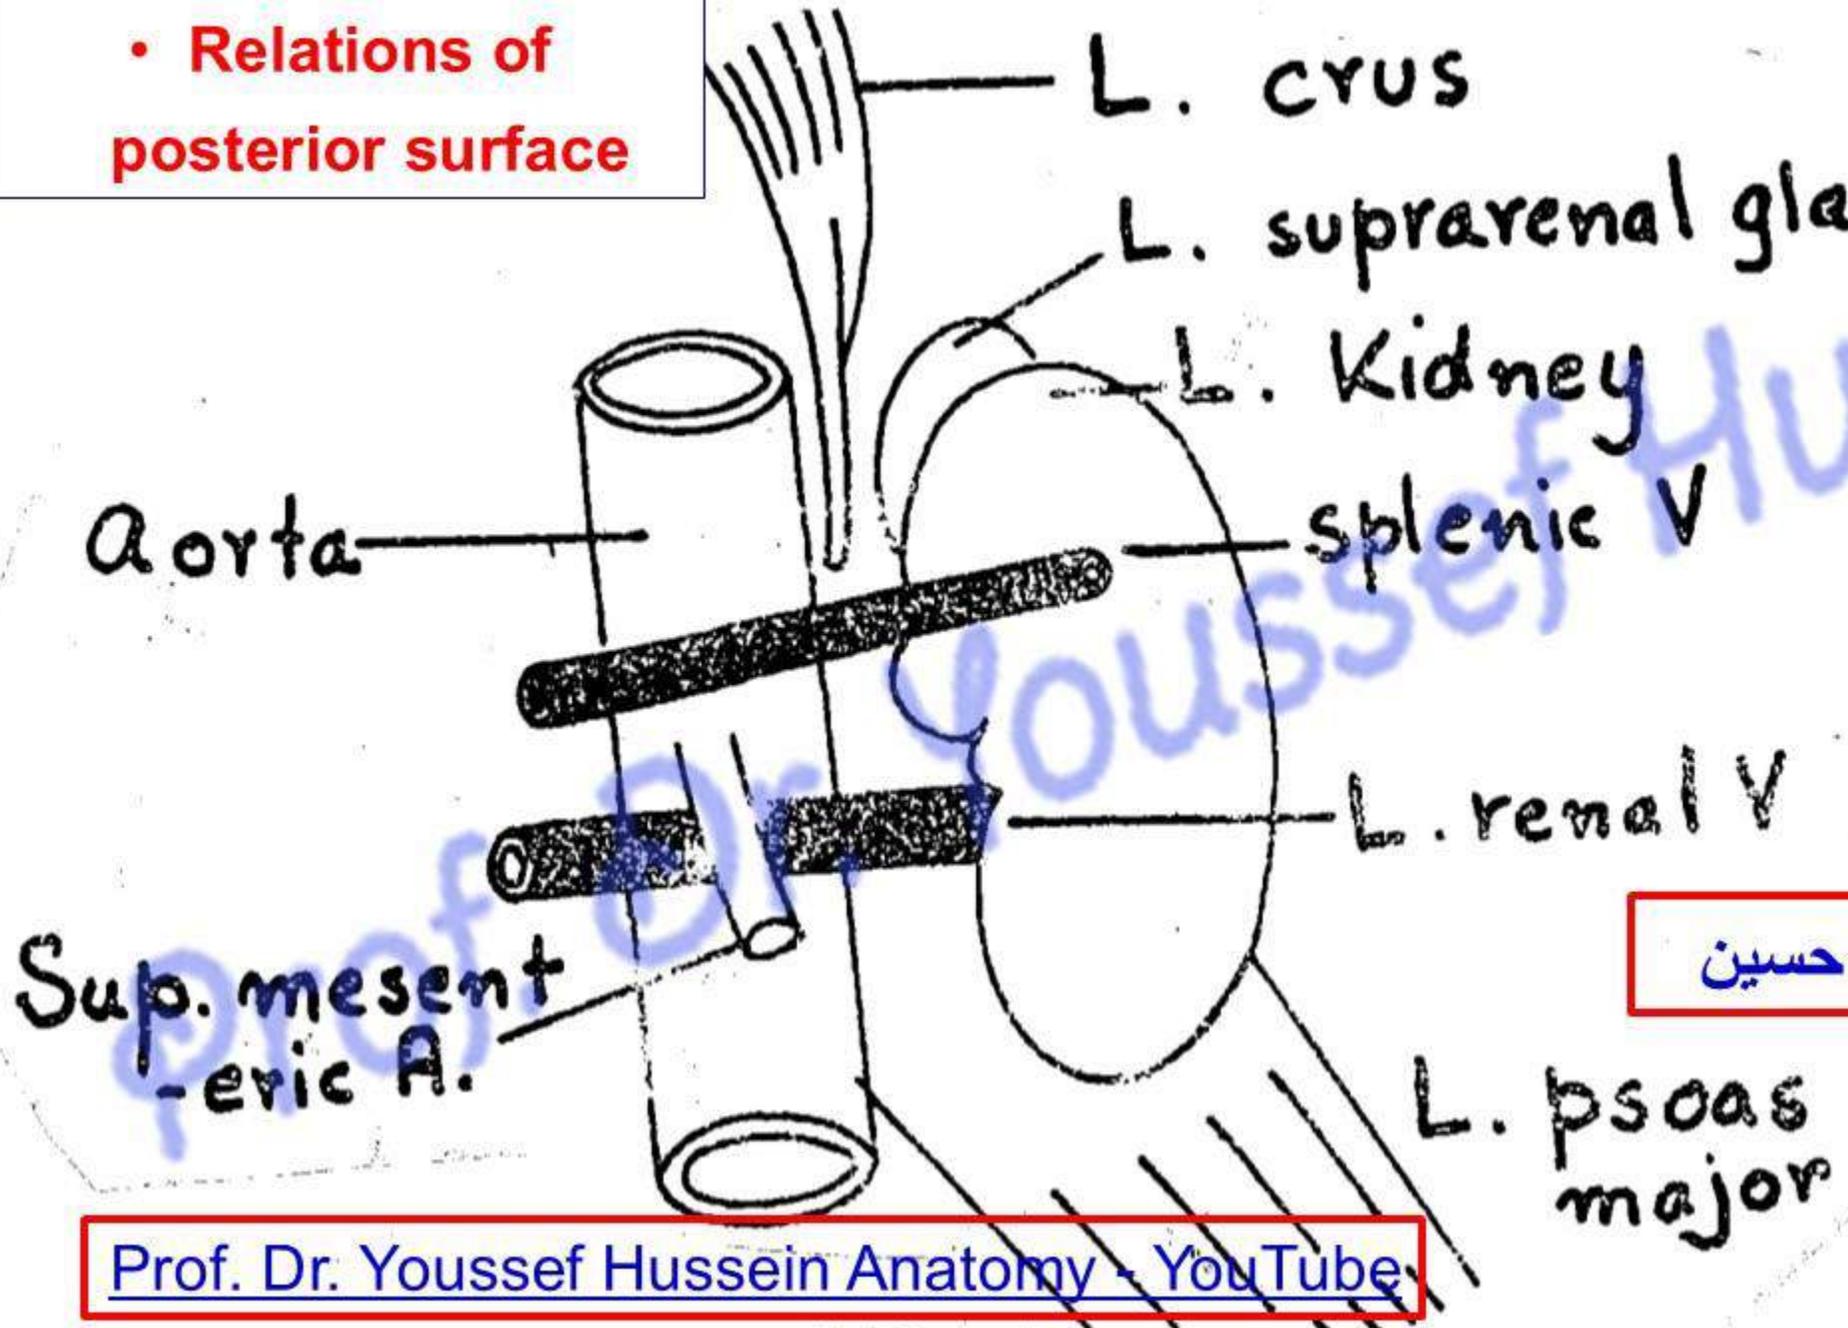

- Posterior surface of stomach.
- Cavity of the lesser sac.

اليوتيوب د. يوسف حسين

Stomach

Prof. Dr. Youssef Hussein Anatomy - YouTube

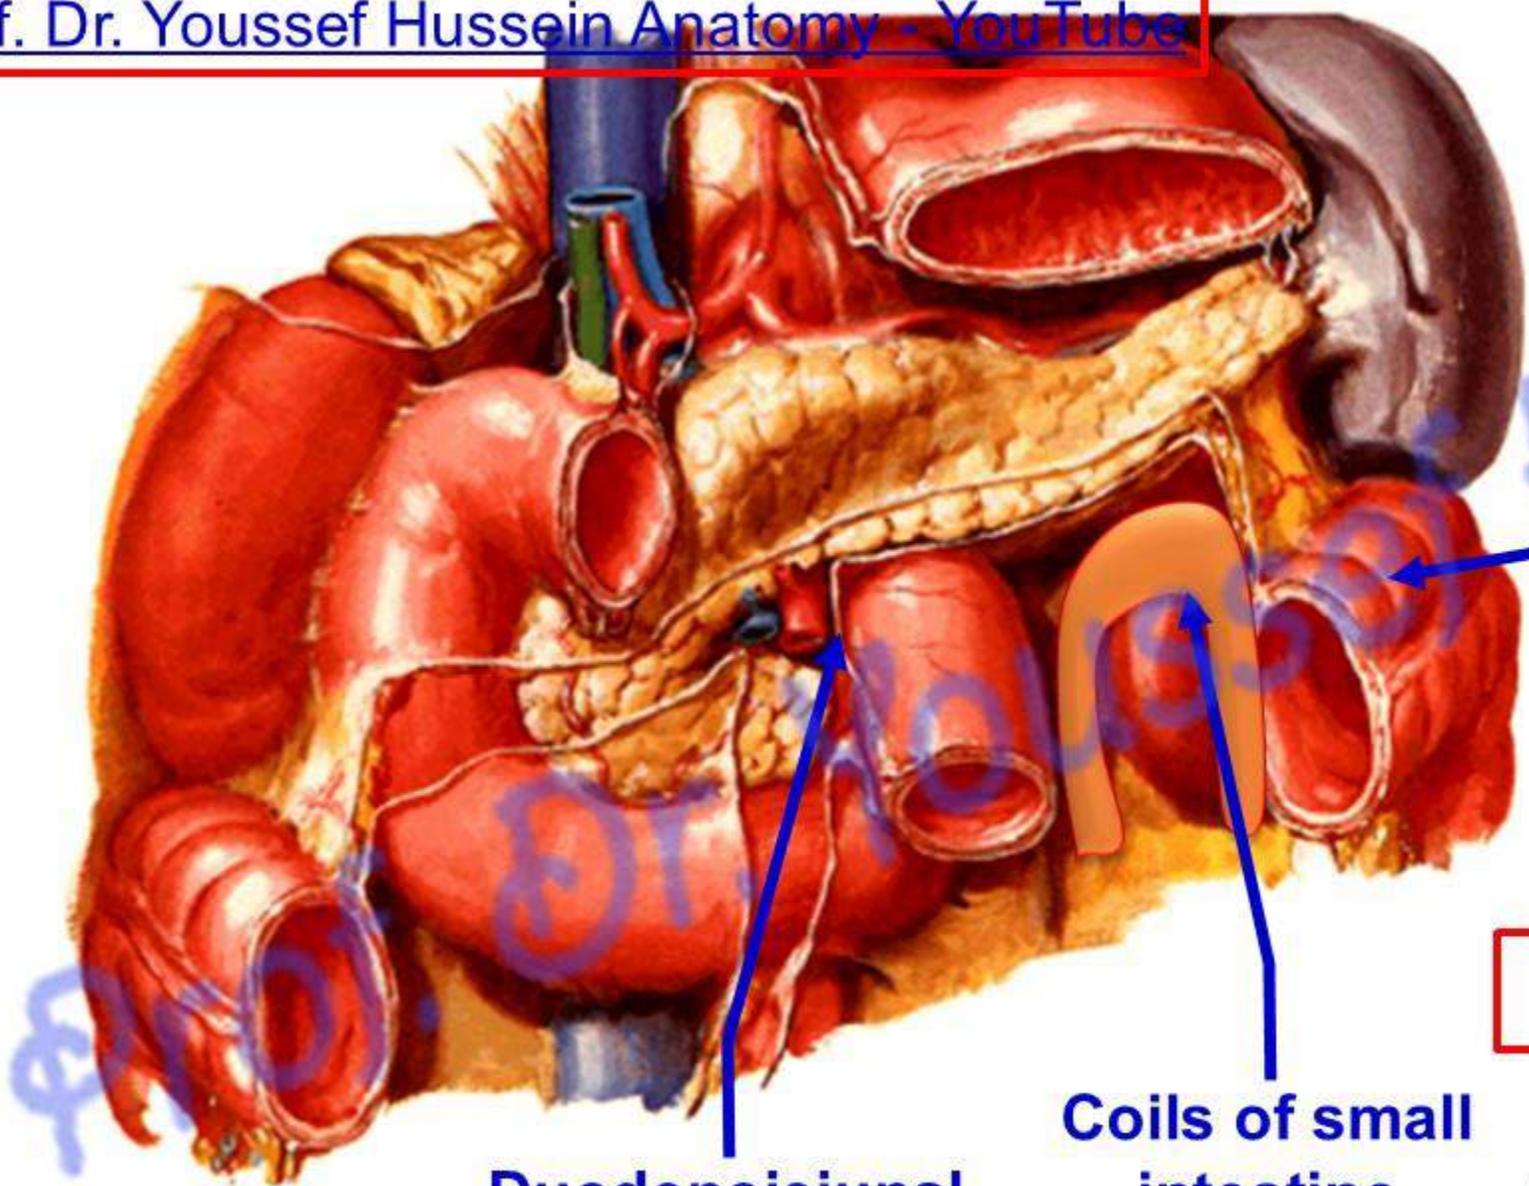

• Relations of posterior surface

- 2 Organs
- 2 Arteries
- 2 veins
- 2 muscles

اليوثيوب د. يوسف حسين

- Relations of inferior surface of body of pancreas

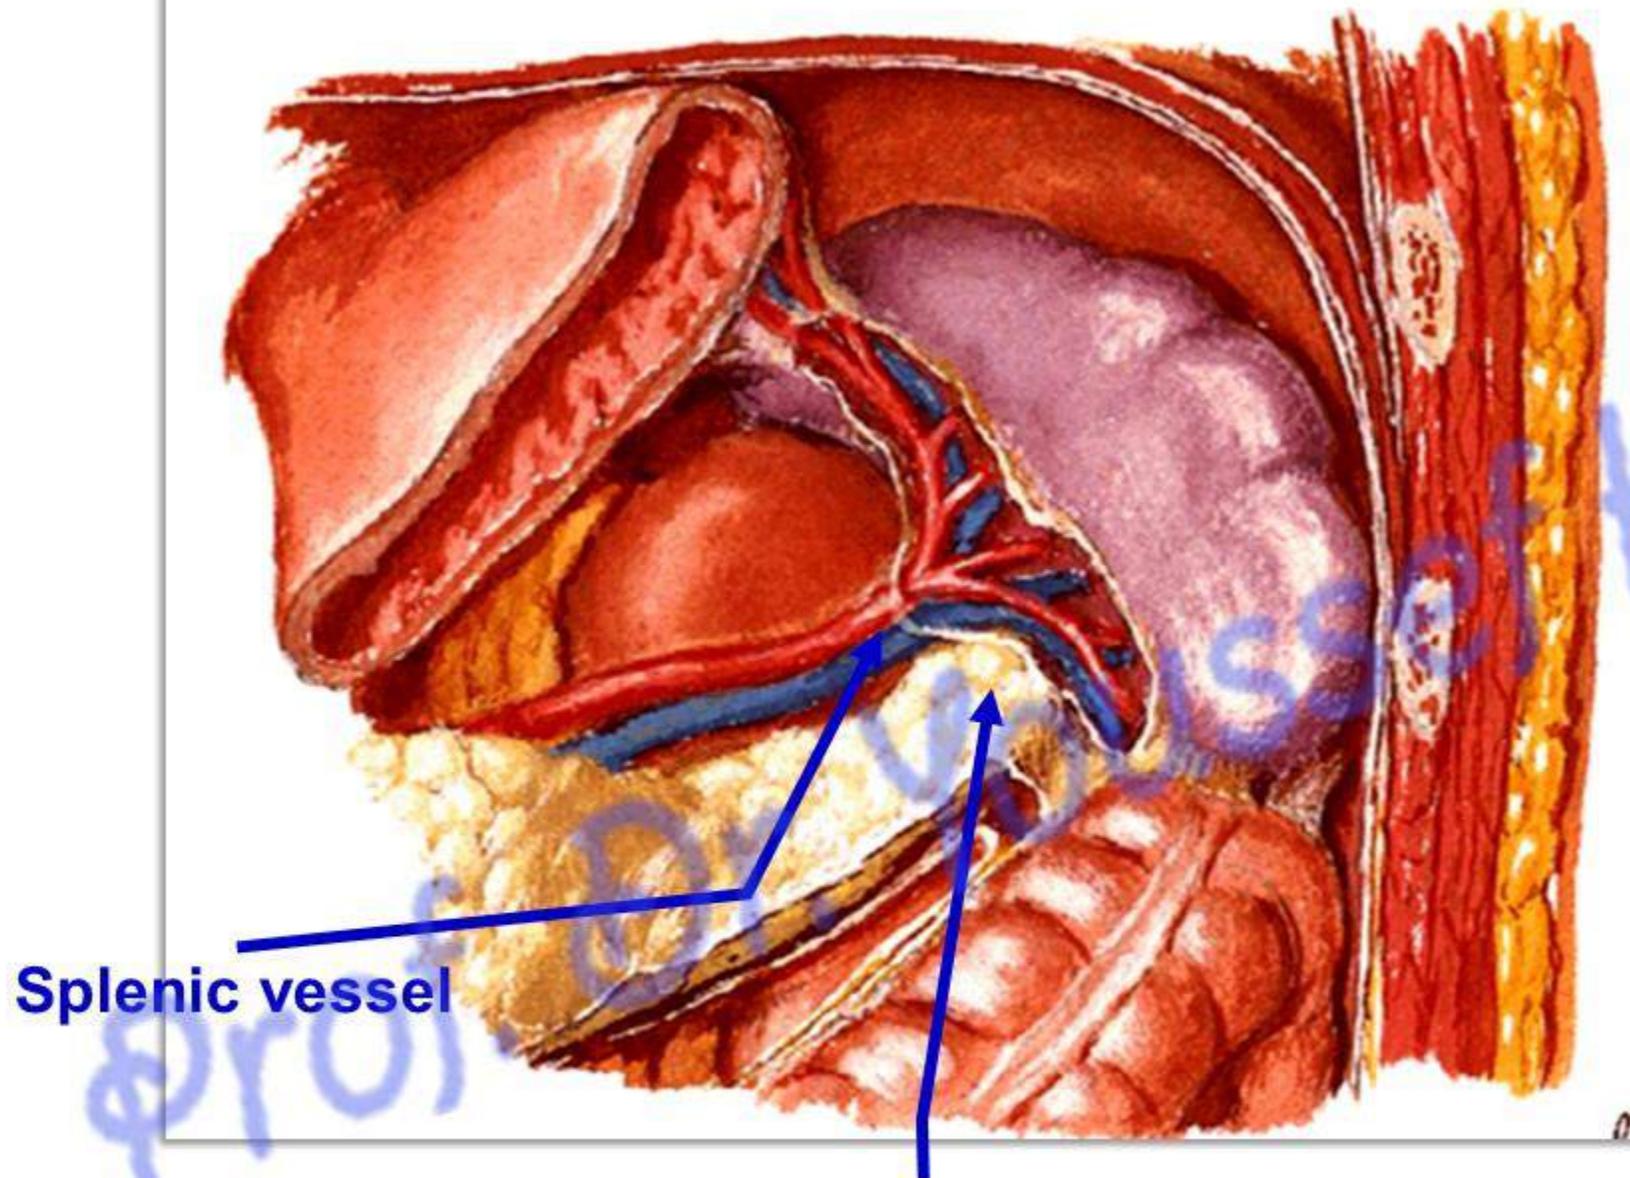

Left colic flexure

Duodenojejunal flexure

Coils of small intestine

اليو تيوب د. يوسف حسين

Splenic vessel

Tail of pancreas

Tail of pancreas passes between two layers of lienorenal ligament to the spleen with splenic vessel.

Prof. Dr. Youssef Hussein Anatomy - YouTube

Accessory pancreatic duct (Santorini's Duct) begins in the lower part of head opens into **minor duodenal papilla** in the 2nd part of duodenum, **one inch above** major duodenal papilla.

Common bile duct

• Pancreatic ducts

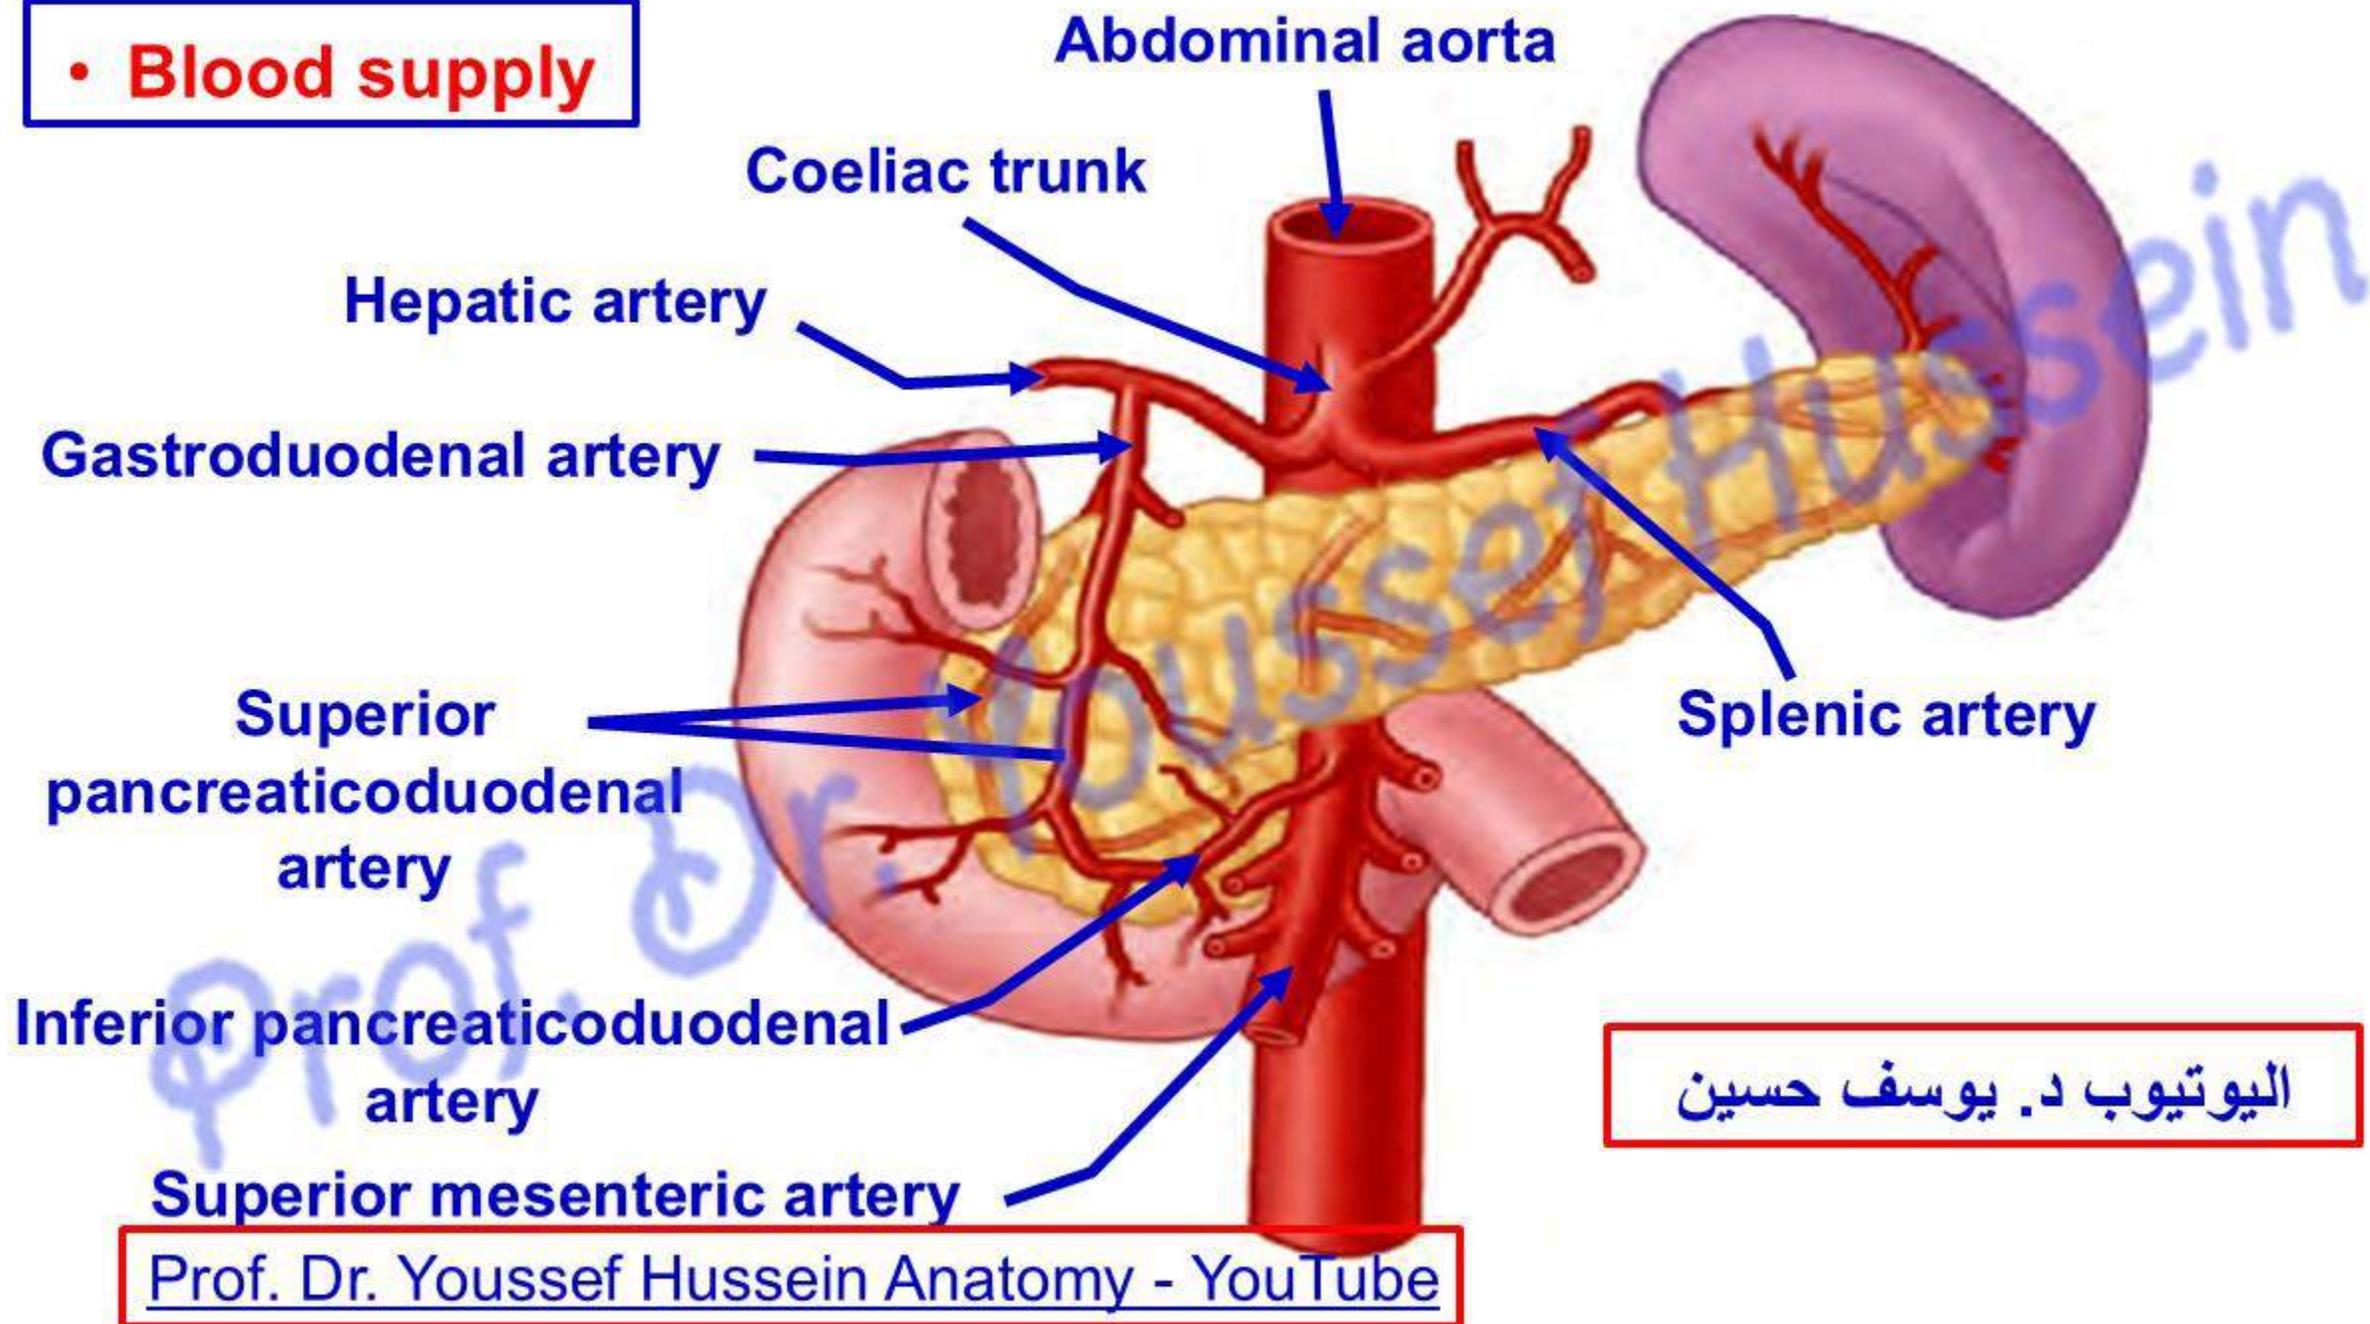

Hepatopancreatic duct that opens into **major duodenal papilla** (ampulla of Vater) in the 2nd part of duodenum

اليو تيوب د. يوسف حسين

Main pancreatic duct (duct of Wirsung) begins in the tail

Prof. Dr. Youssef Hussein Anatomy - YouTube

• **Blood supply**

اليوتيوب د. يوسف حسين

- **Blood supply**

**** Arterial supply**

- 1- Pancreatic branches of the splenic artery.
- 2- Superior pancreaticoduodenal artery branch of gastroduodenal artery.
- 3- Inferior pancreaticoduodenal artery branch of superior mesenteric artery.

**** Venous drainage**

- 1- Pancreatic branches drain into the splenic vein.
- 2- Pancreaticoduodenal vein drains into superior mesenteric vein.

**** Vessels related to the pancreas;**

- 1- Aorta.
- 2- Splenic vessels
- 3- Superior mesenteric vessels.
- 4- Superior and inferior pancreaticoduodenal vessels
- 5- I.V.C.
- 6- Two renal veins.
- 7- Portal vein.

اليوتيوب د. يوسف حسين

• Clinical notes

- **Pancreatic cancer:** causes severe abdominal pain and severe back pain, severe jaundice, it is lethal
- It has the potential to invade into the adjacent organs
- It is extremely difficult to treat but may be treated by a surgical resection called a pancreaticoduodenectomy or **Whipple's procedure**.
- **Cancer of the pancreatic head** often compresses and obstructs the common bile duct, causing obstructive jaundice.
- **Cancer of the pancreatic neck** may cause portal vein obstruction.
- **Cancer of the pancreatic body** may cause IVC obstruction.

اليوثيوب د. يوسف حسين

• Clinical notes

- **Diabetes mellitus** is characterized by hyperglycemia
 - **There are two types of diabetes**
- **Type I diabetes** (**insulin-dependent diabetes**) in which the pancreatic cells produce an **insufficient amount** of insulin;
- **Type II diabetes**, results from **insulin resistance** of target tissues (a condition in which body fails to properly use insulin or fails to respond properly to insulin action).
- **Diabetes causes** It has symptoms of polyuria (excessive secretion of urine), polydipsia (thirst), weight loss, tiredness, infections of urinary tract, and blurring of vision. **Later**, causes diabetic retinopathy, neuropathy, kidney failure, heart disease, stroke, and limb disease.
