

LYMPHATIC SYSTEM

(Lab)

Lymphatic system

```
graph TD; A[Lymphatic system] --> B[A-Lymphatic vessels]; A --> C[B-Lymphatic tissue]
```

A-Lymphatic vessels

B-Lymphatic tissue

The lymphatic vessels

-Carry lymph

-Structure= blood Vessels

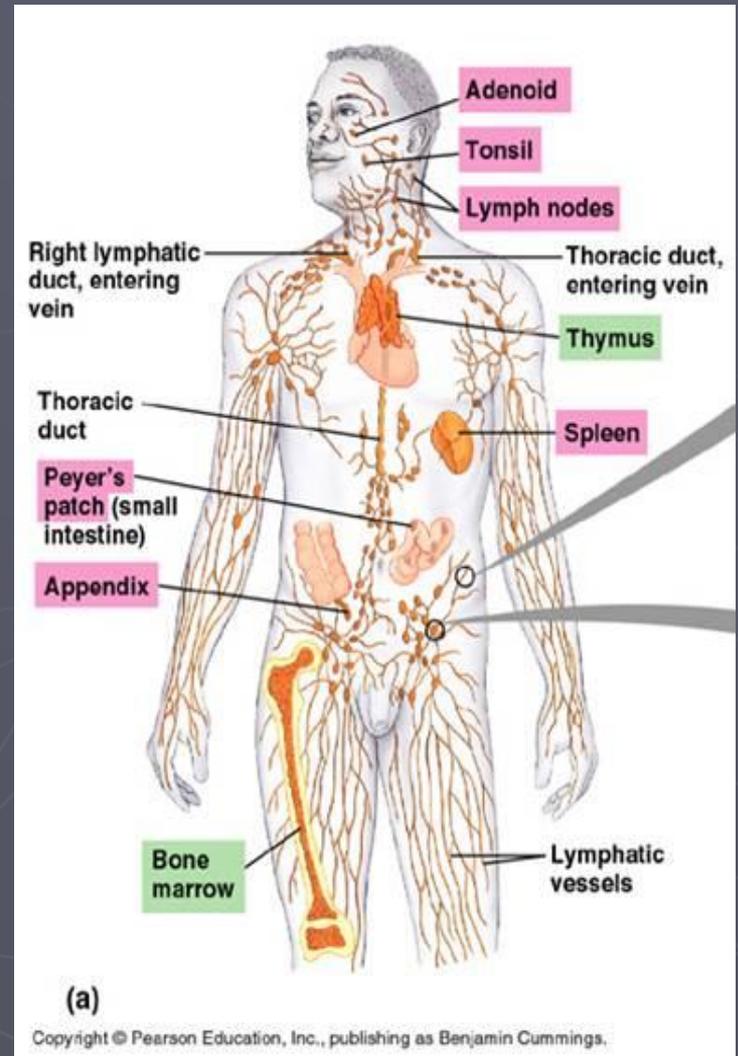

Lymphatic tissue

-Aggregates of *lymphocytes* embedded in meshwork of *reticular fibers*.

-Organized into **organs**:

- 1-Thymus
- 2-Lymph node
- 3-Spleen
- 4-Tonsil

THYMUS

-Site?

-Structure?

Stroma :

a) Capsule.

b) Incomplete septa

c) Reticular network

Parenchyma

Each lobule has a

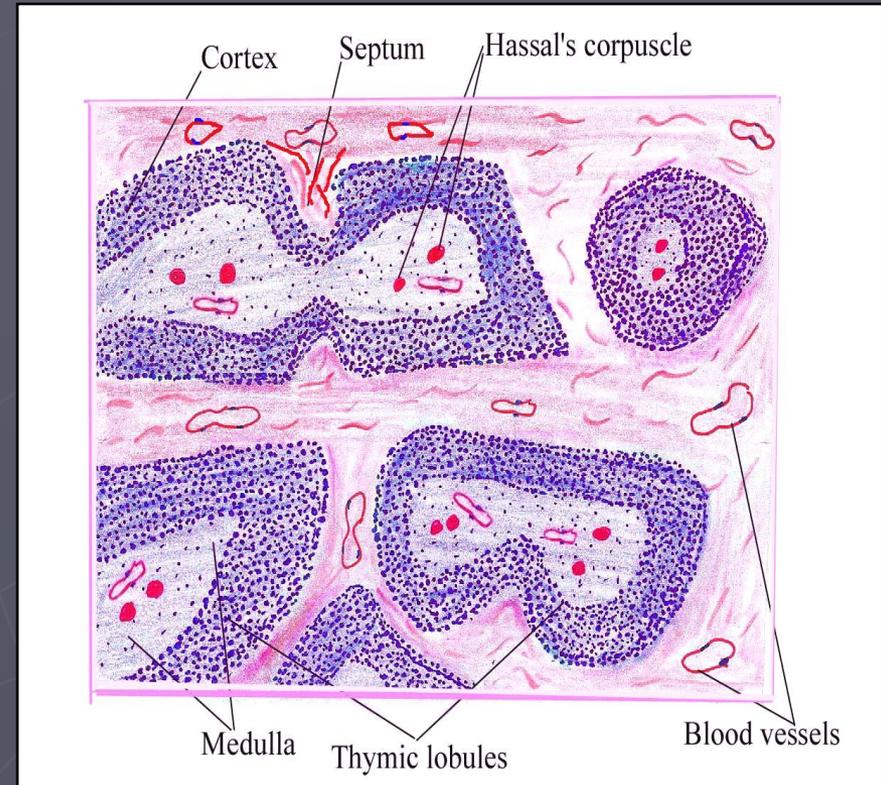

-*peripheral cortex*.... dark zone

-*central medulla*

lightly stained ?

It contains Hassle's corpuscles?

-Function?

THYMUS

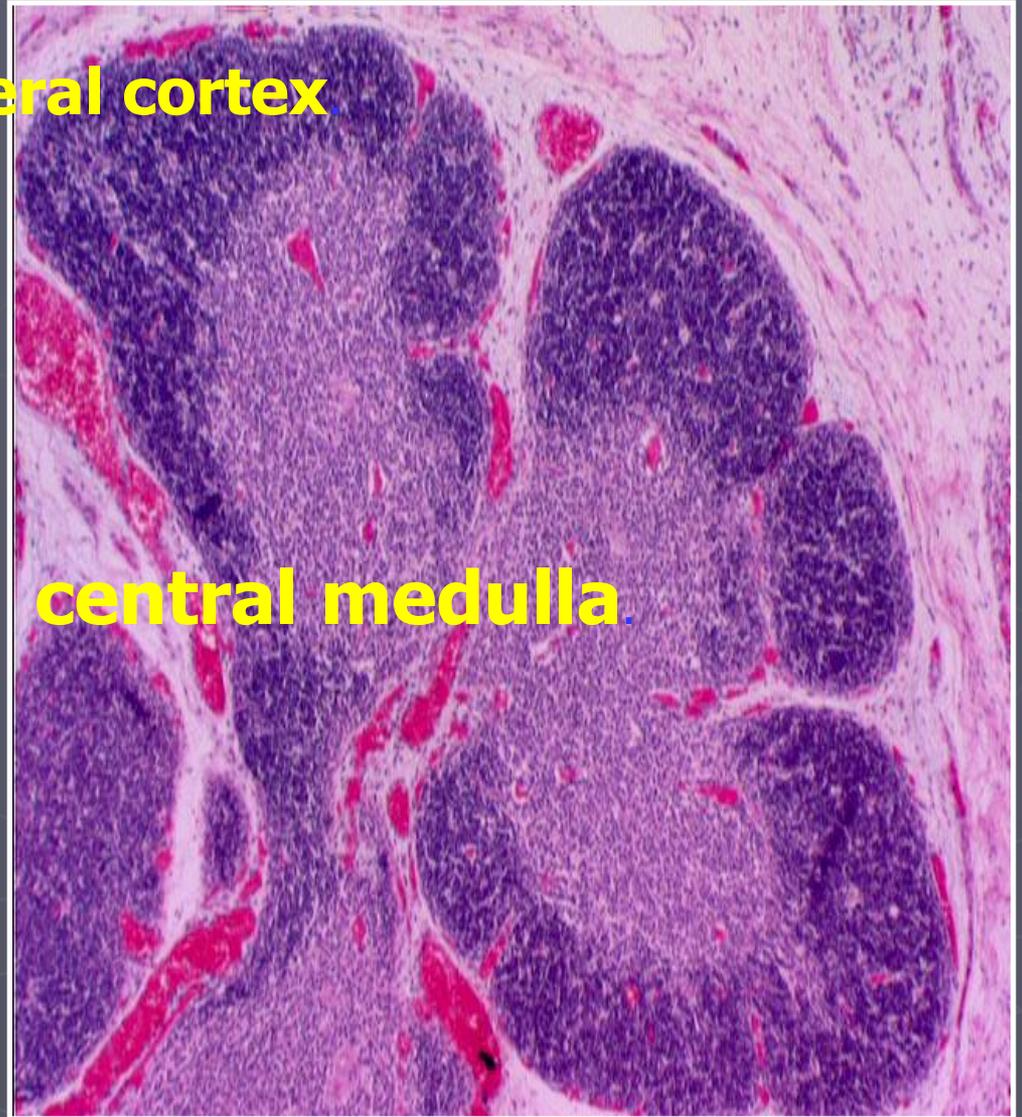

Thymus and central medulla.

S

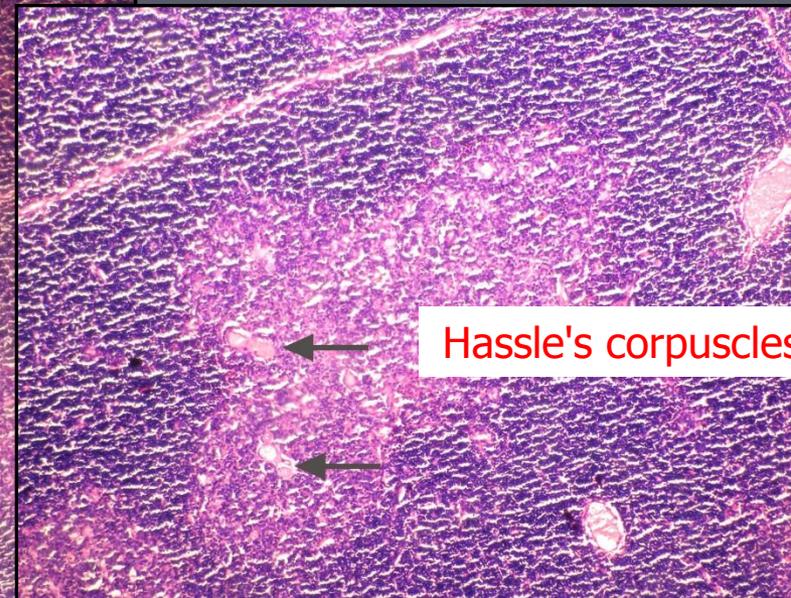

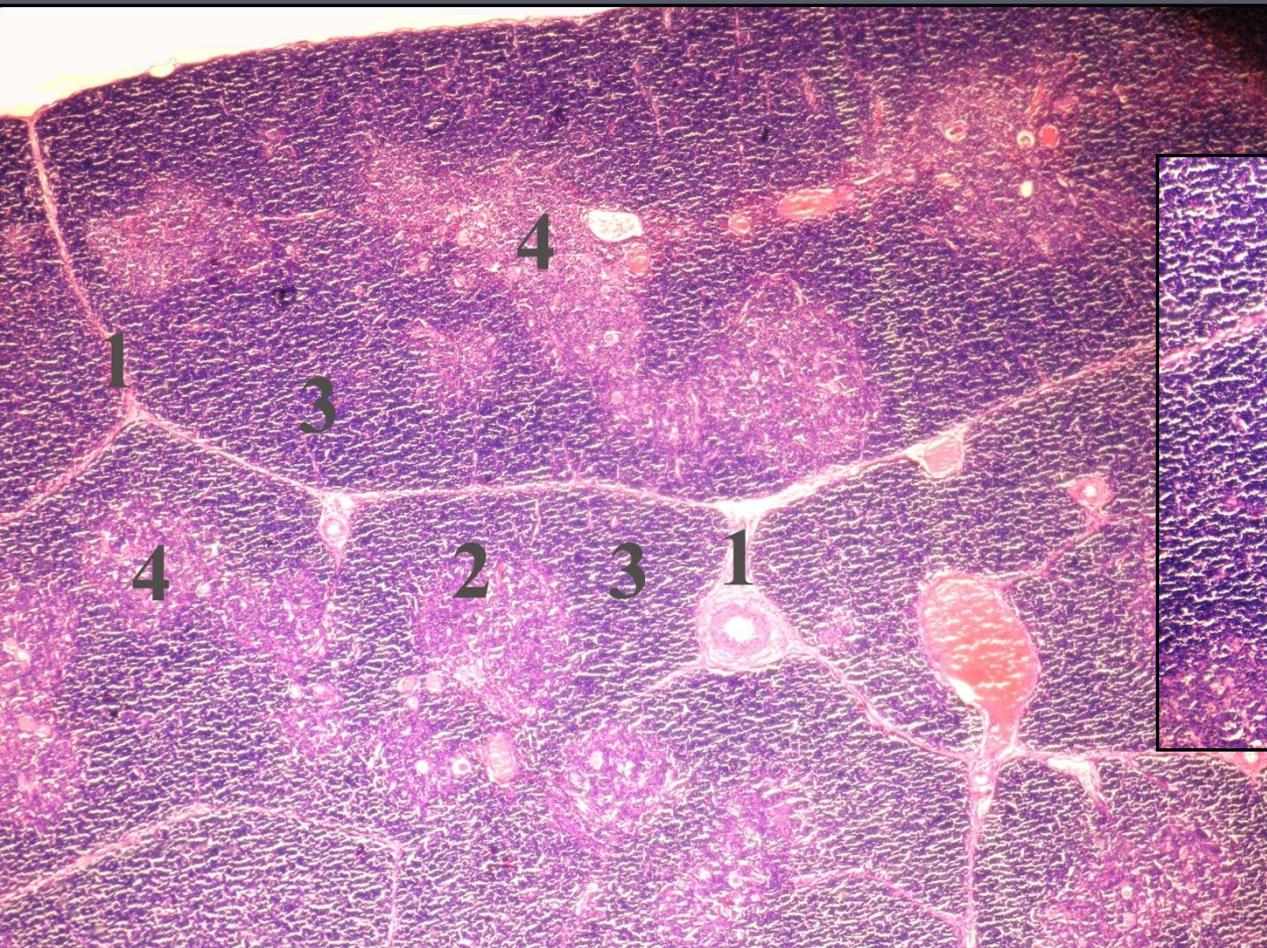

peripheral cortex

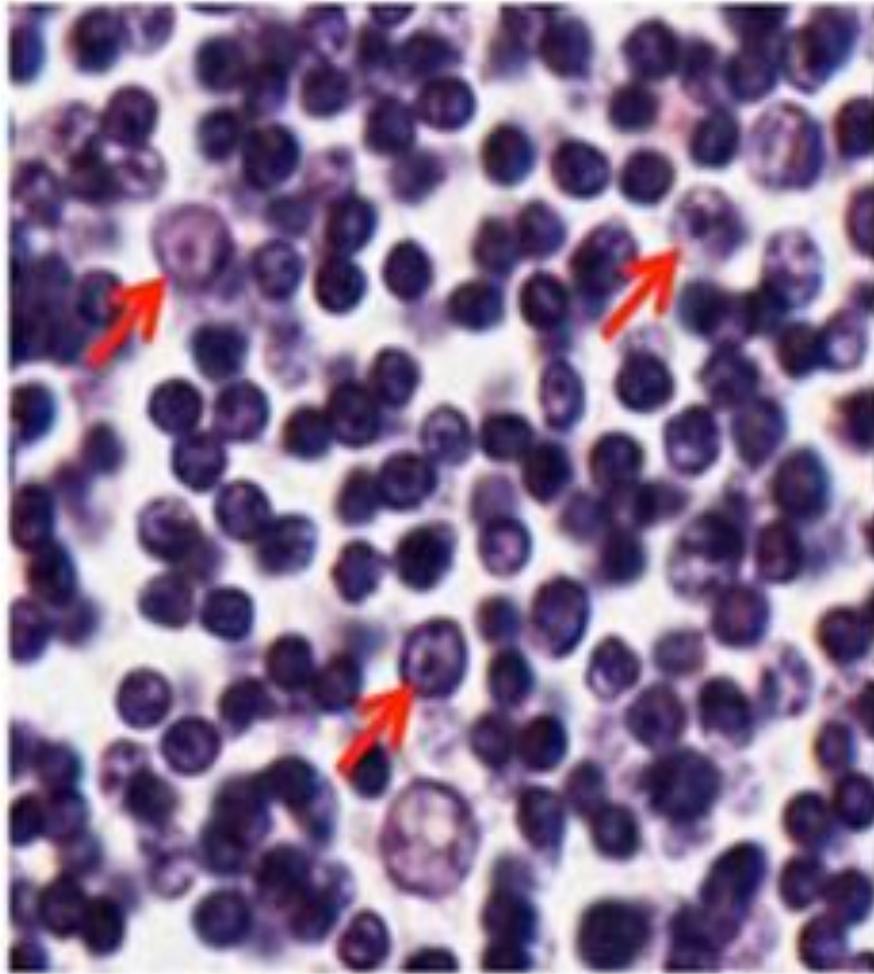

central medulla

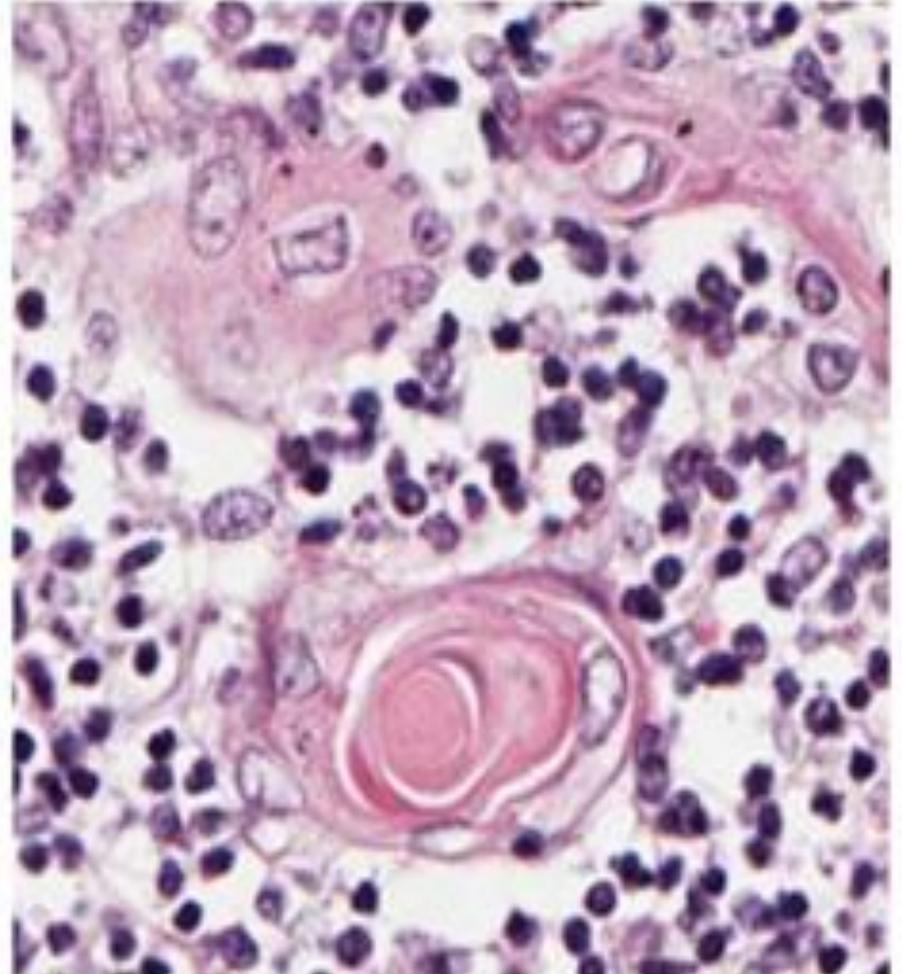

THYMUS

Thymus

Thymic cortex

Thymic medulla

LYMPH NODE

-Site?

-Shape?

-Structure?

Stroma :

a) Capsule.

b) Incomplete septa
(trabeculae)

c) Reticular network

Parenchyma

- **Cortex**

Lymphatic follicles?

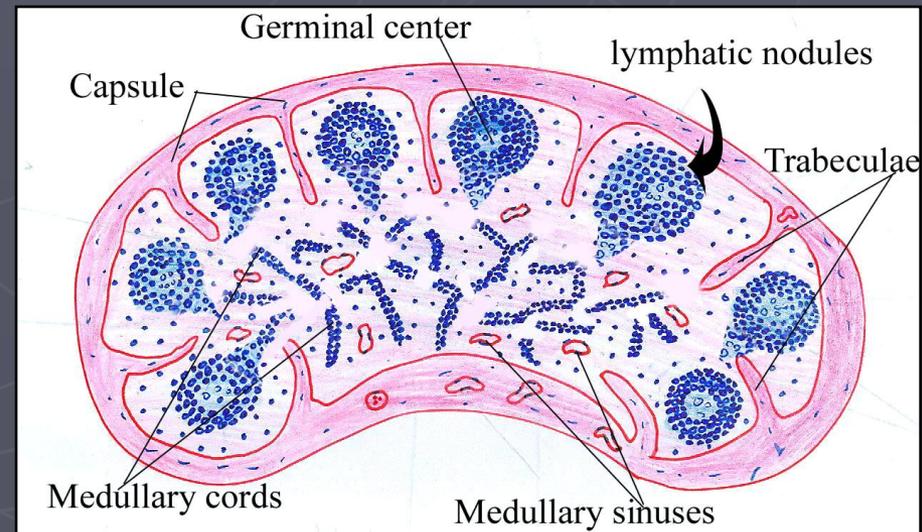

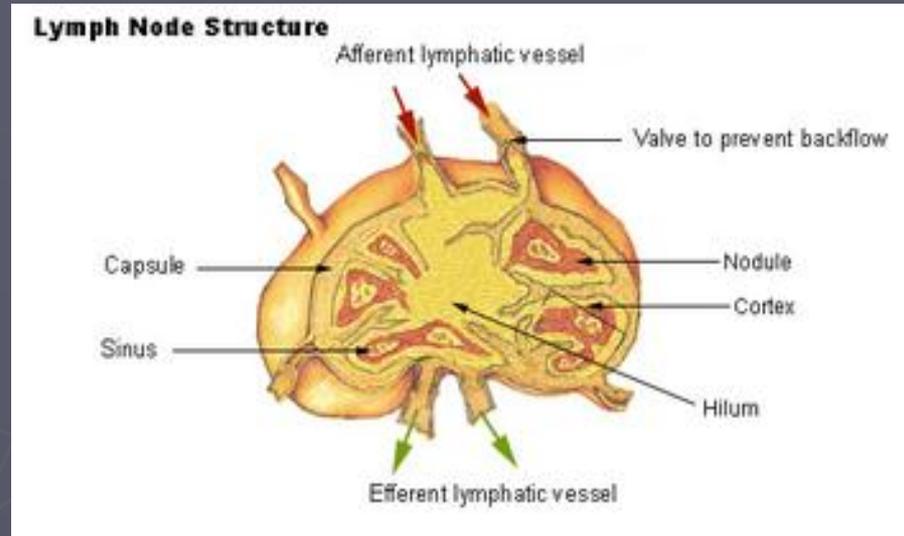

Cortical sinuses

Medulla

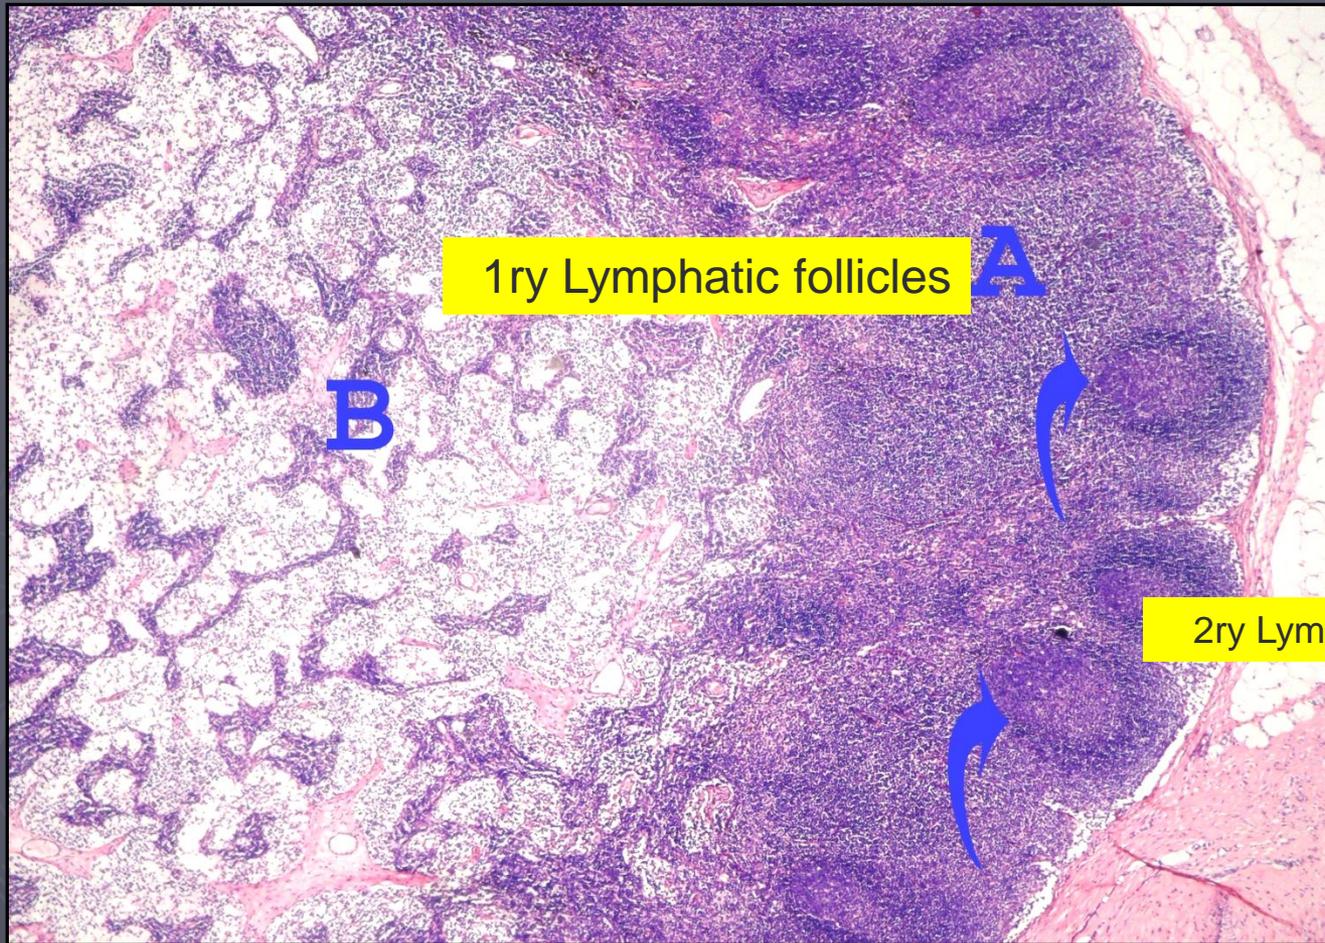

Medullary cords

Medullary sinuses

-Function?

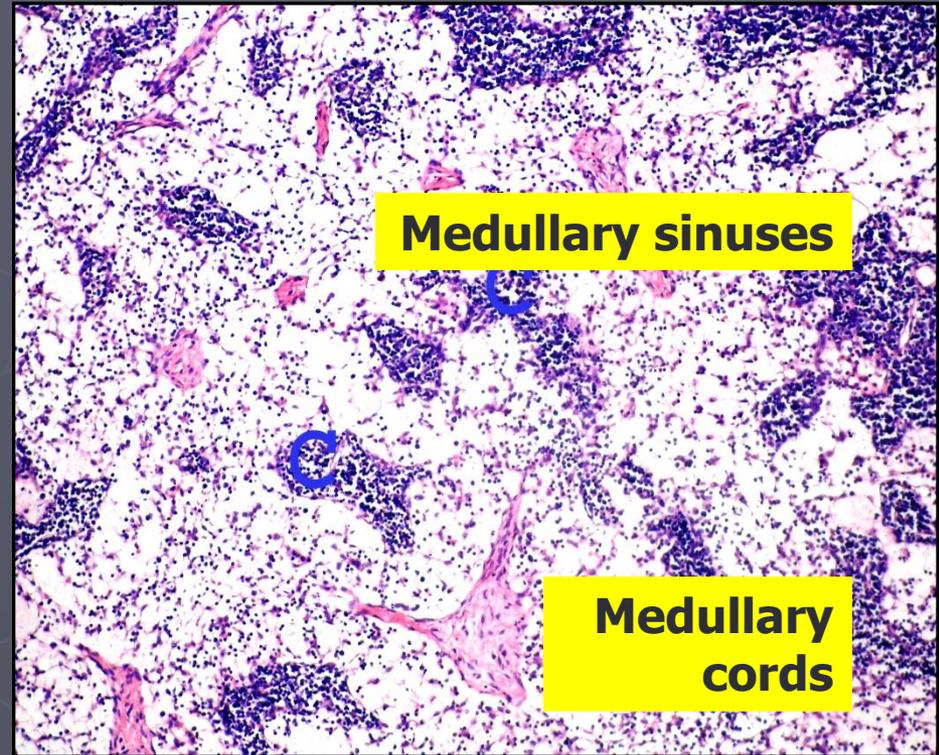

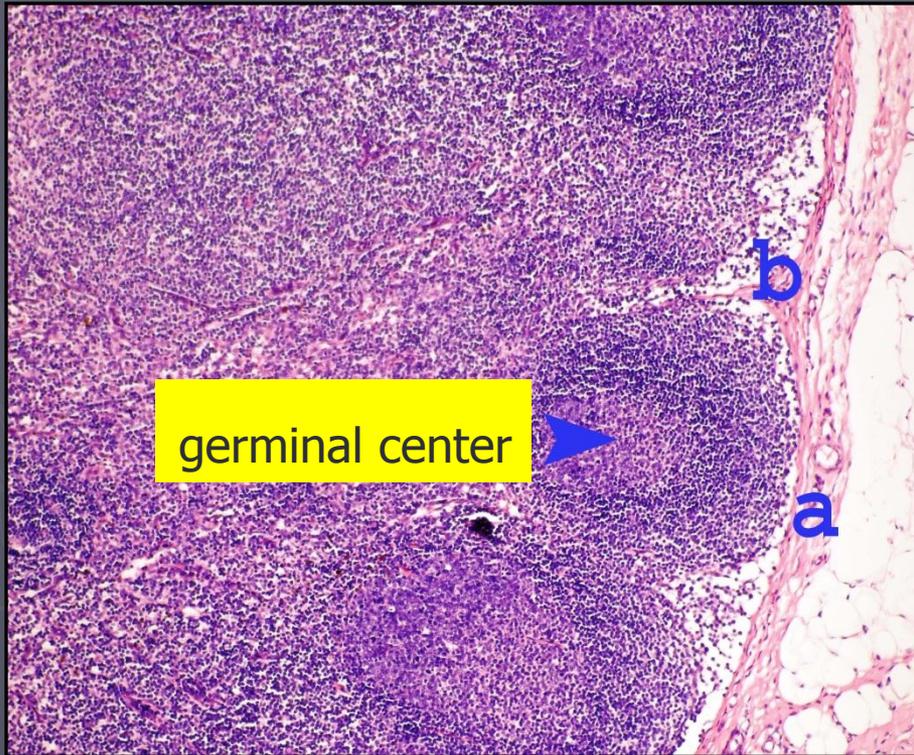

LYMPH NODE

LYMPH NODE

Cortex

Medulla

THE SPLEEN

-Site?

-Structure?

Stroma :

a) Capsule.

b) Incomplete septa
(trabeculae)

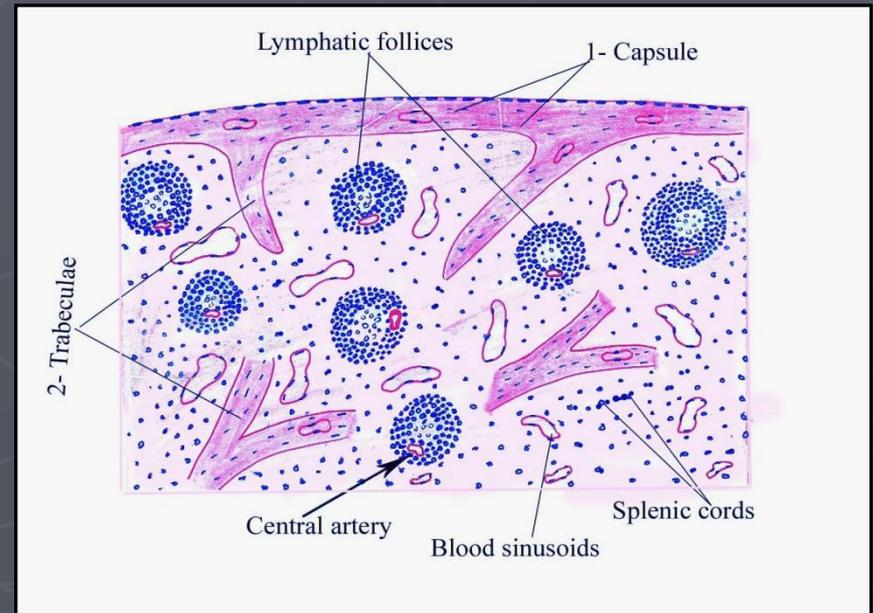

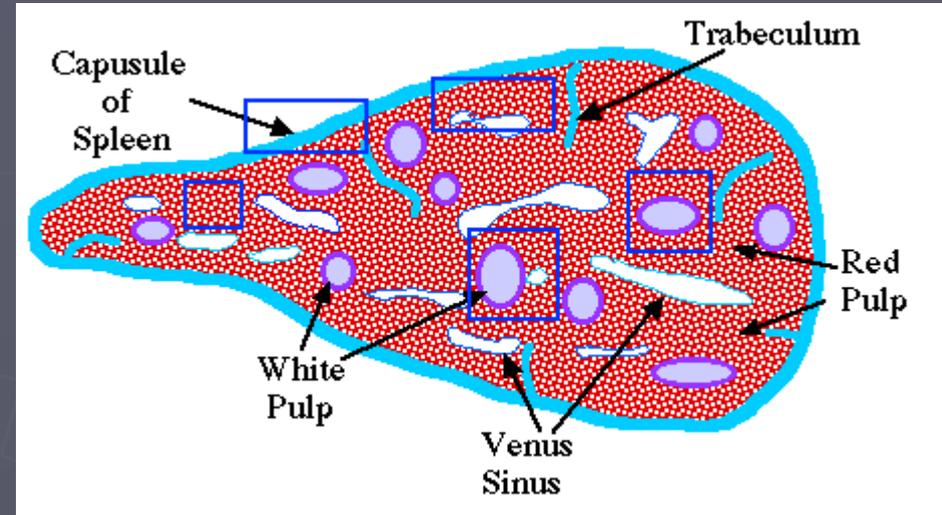

c) Reticular network

Parenchyma

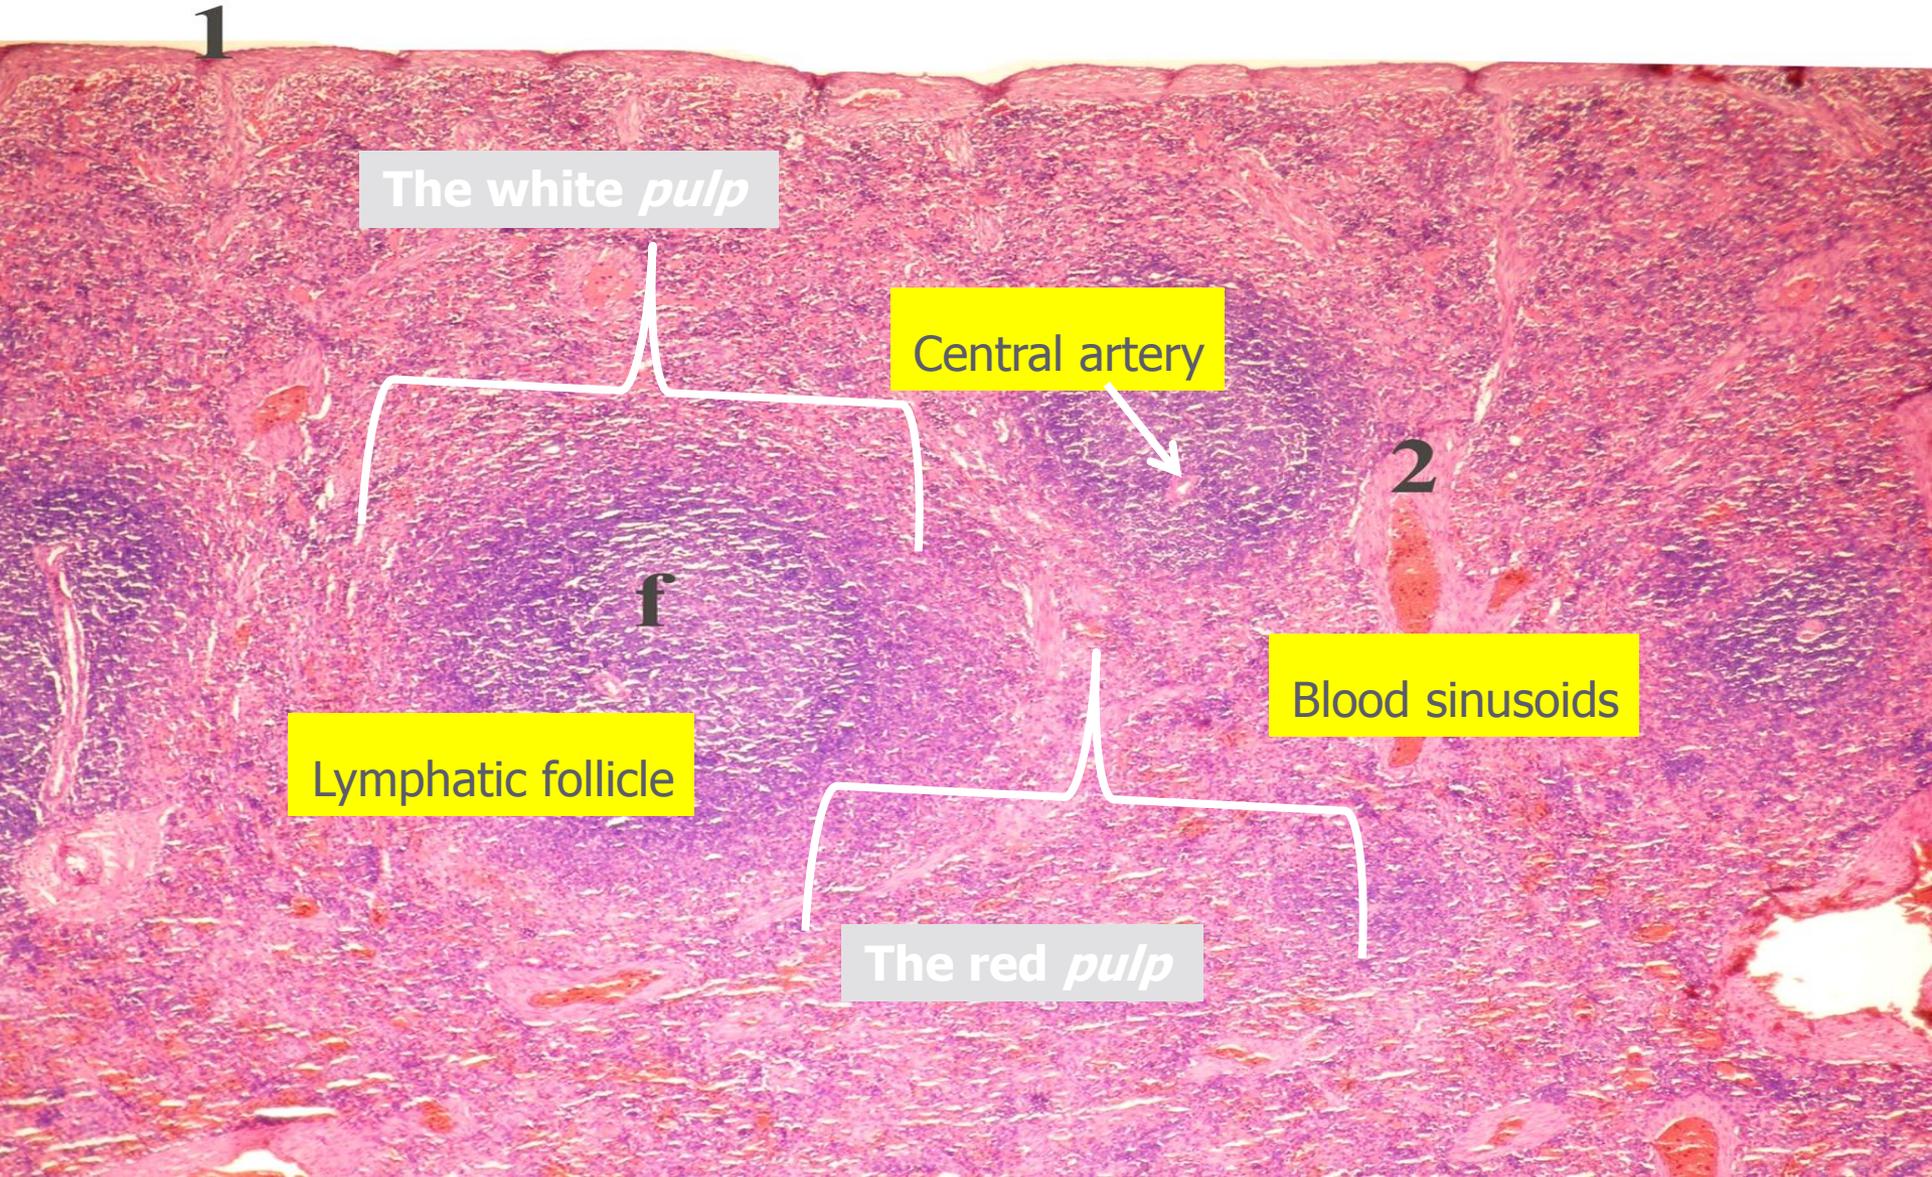

White pulp

Red pulp

-Function?

THE SPLEEN

1

The white *pulp*

Central artery

2

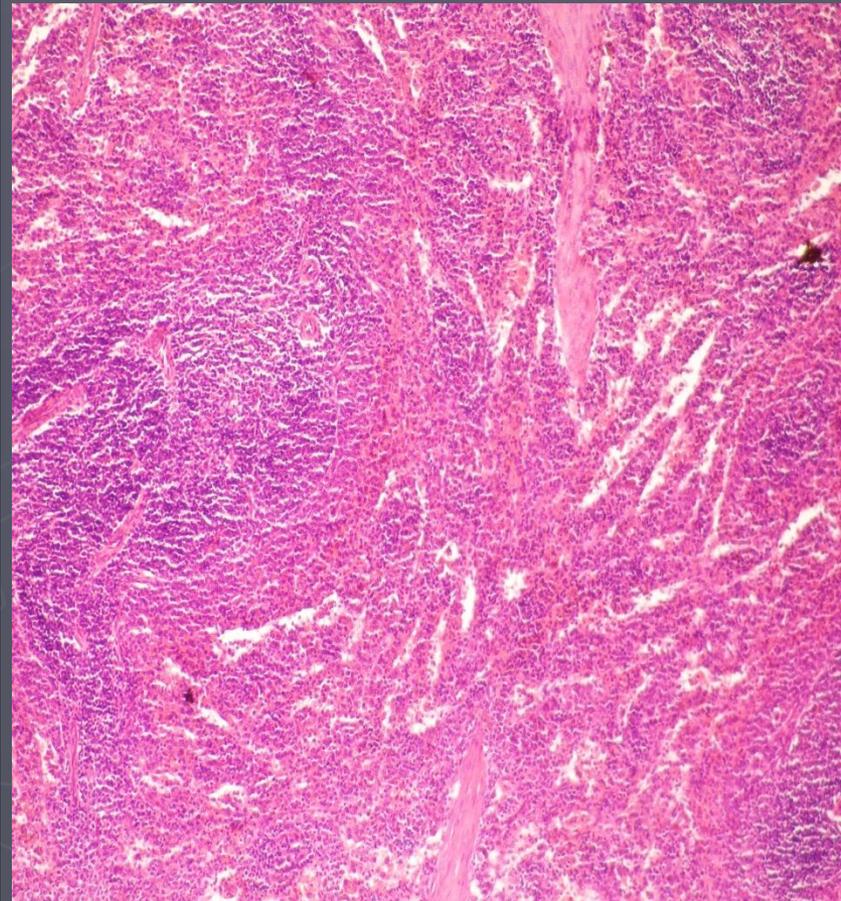

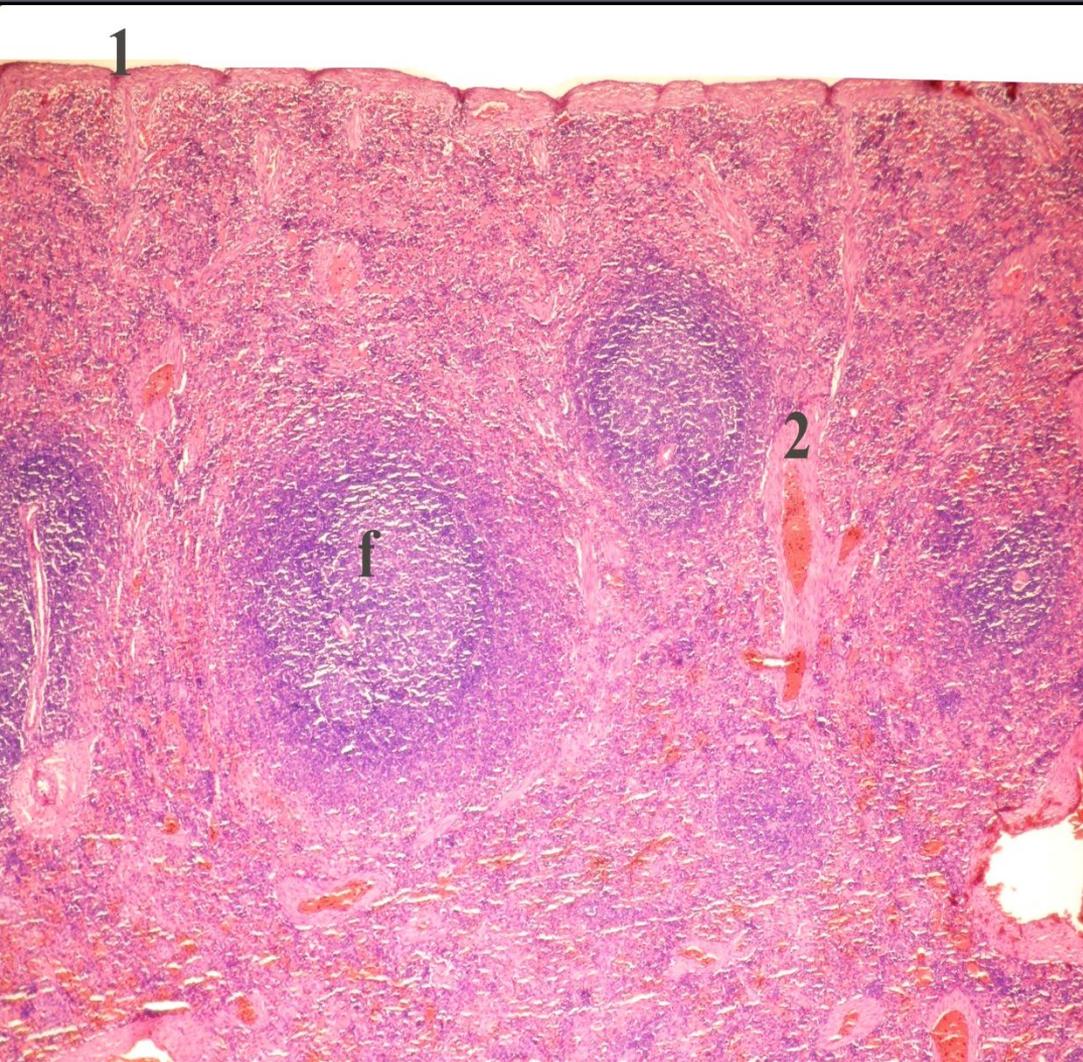

f

Blood sinusoids

Lymphatic follicle

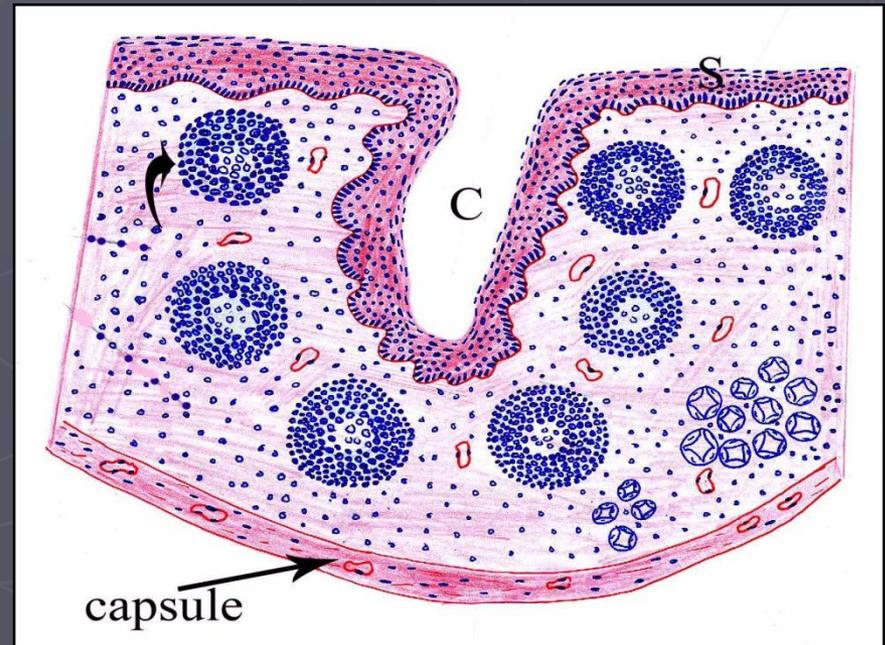

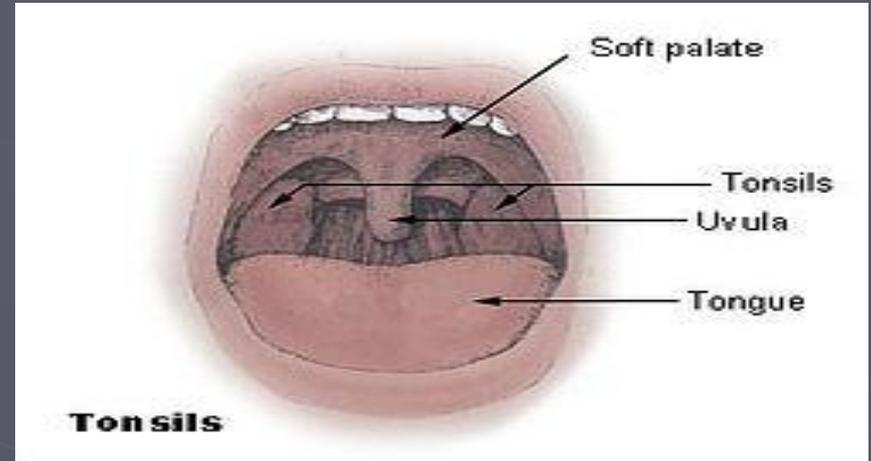

The red *pulp*

THE SPLEEN

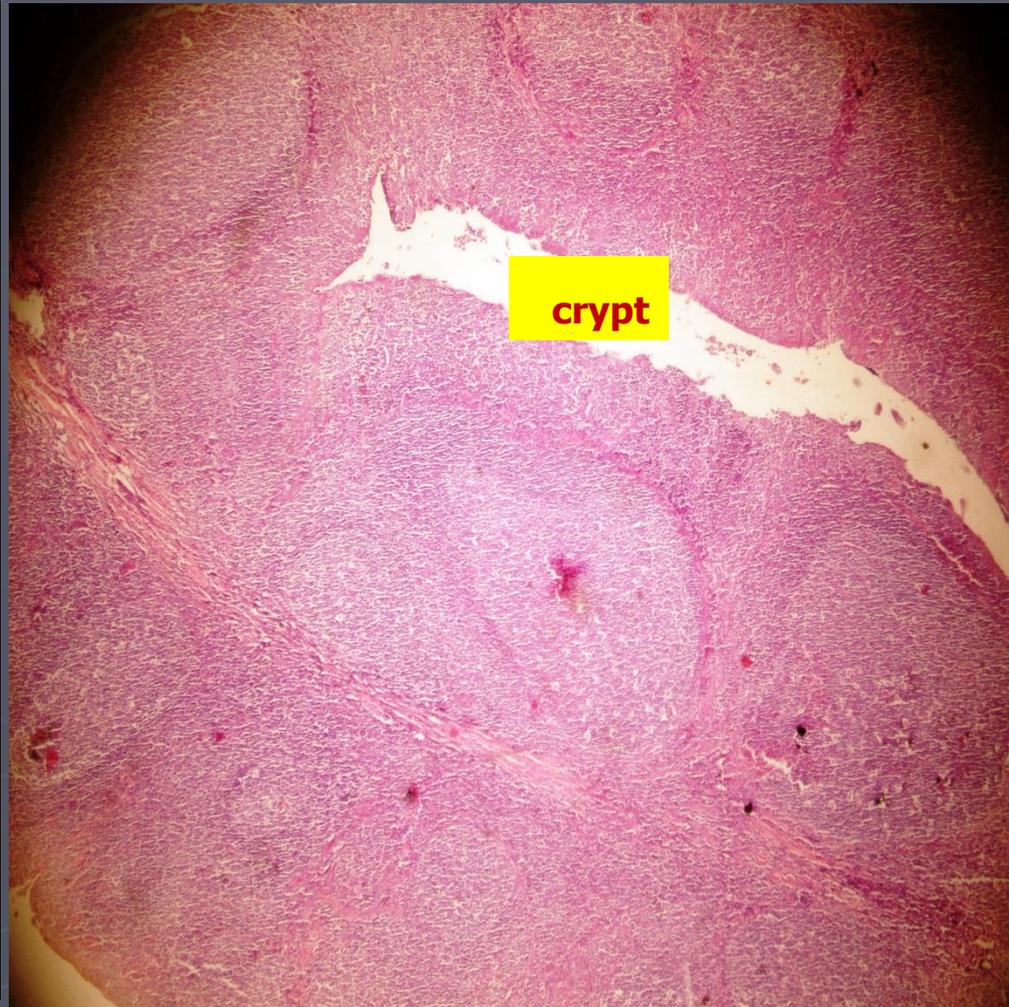

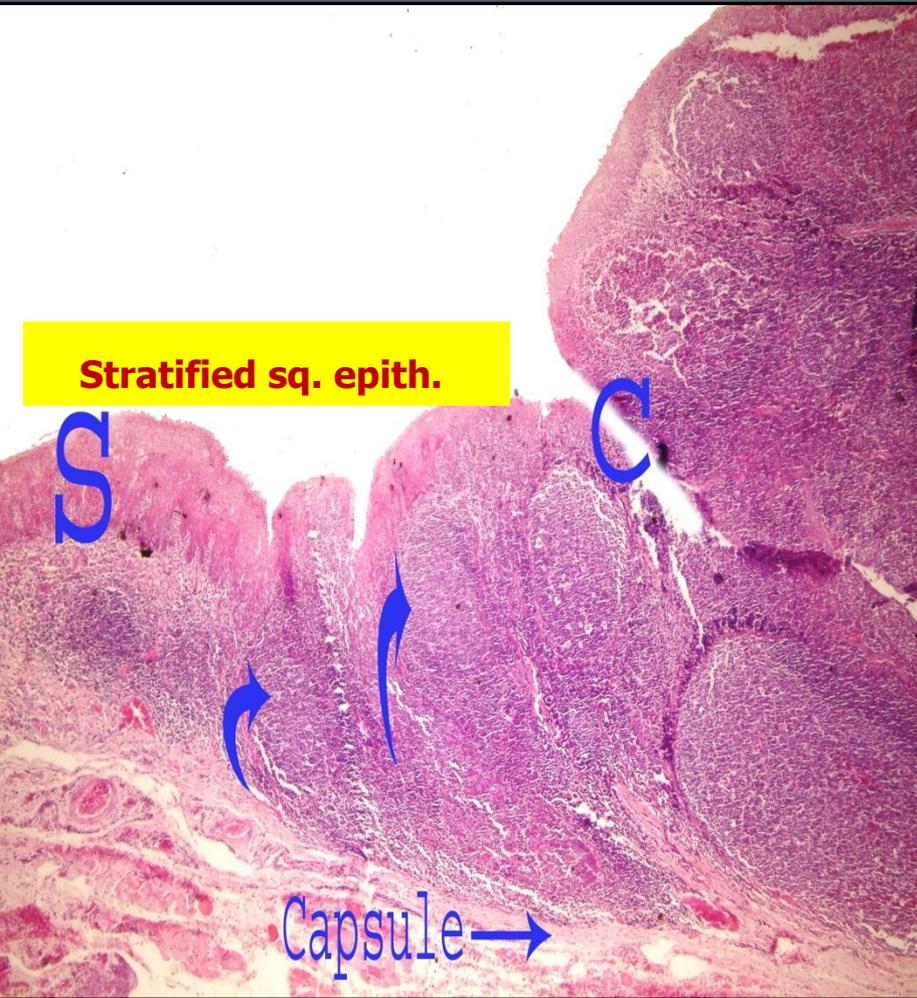

PALATINE TONSILS

- Site?
- Structure?
- Function?

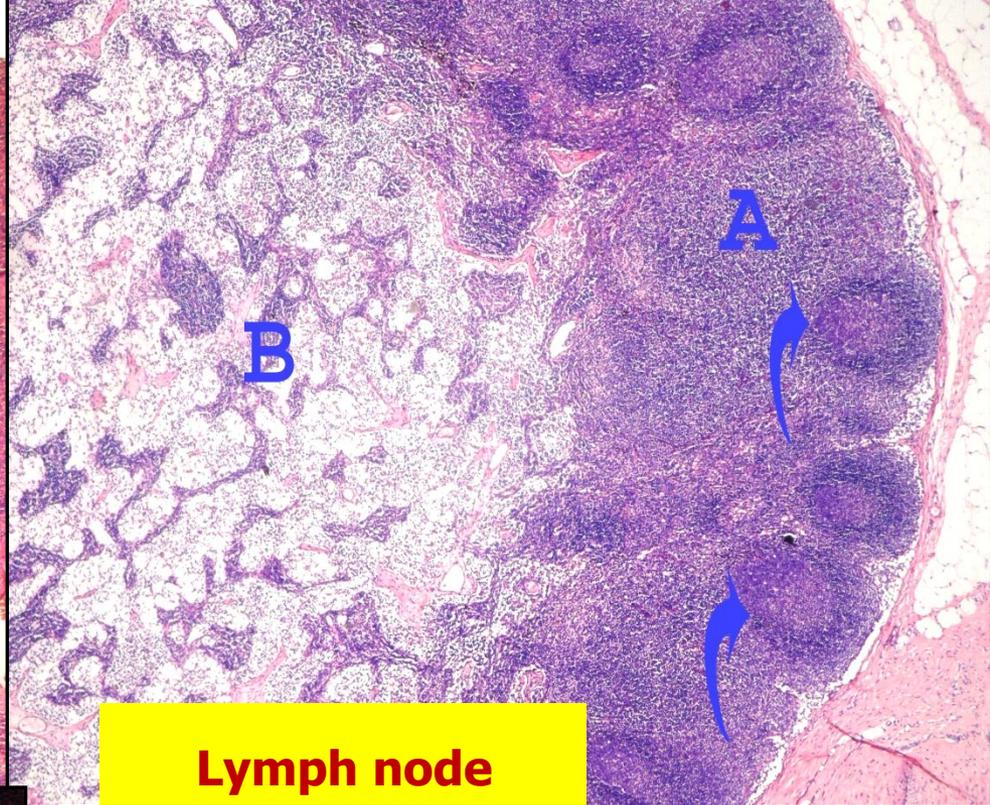

PALATINE TONSILS

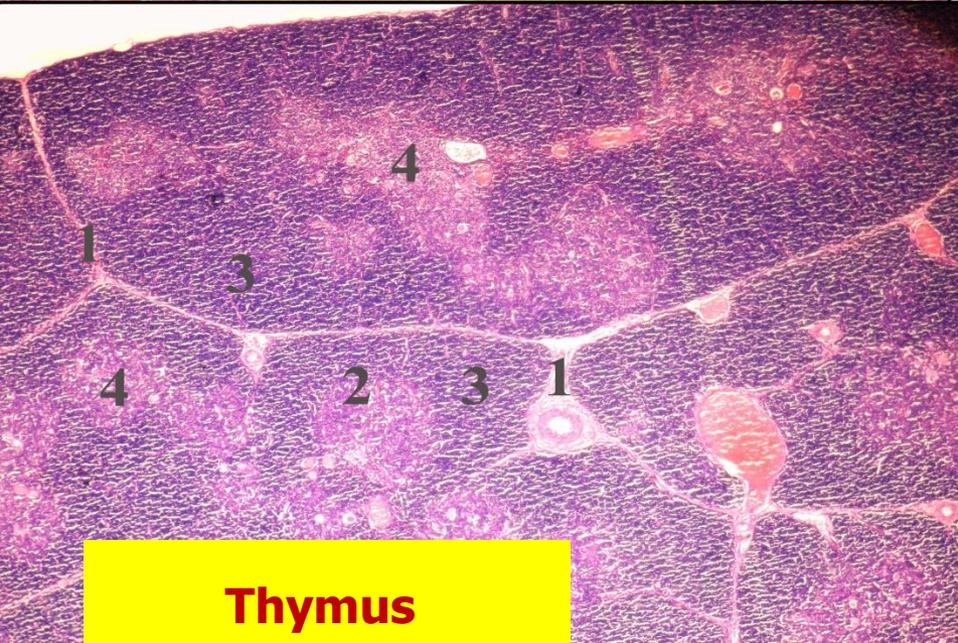

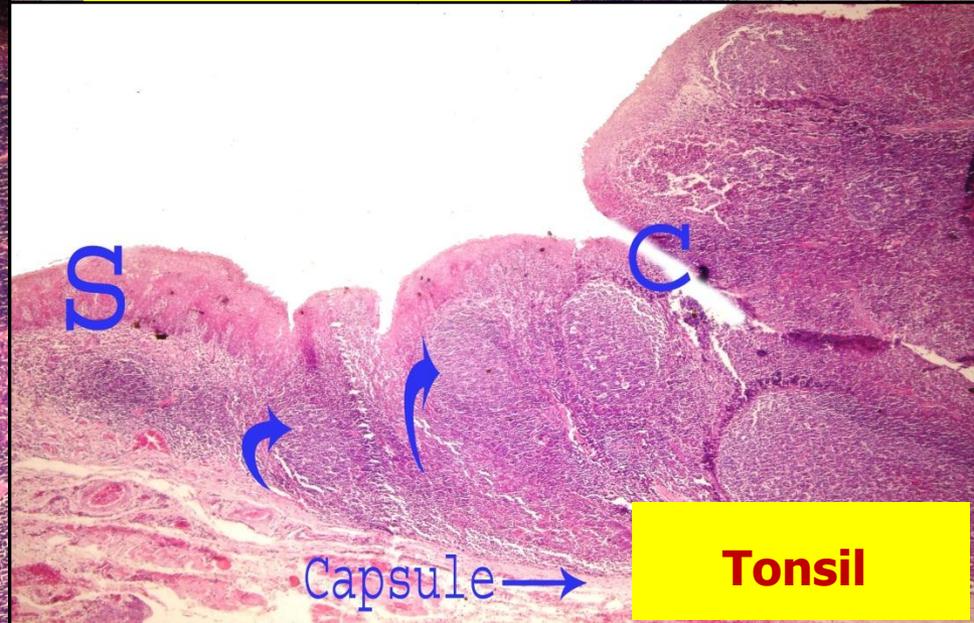

spleen

Lymph node

Thymus

Tonsil
