Lecture 5

Thyroid metabolism

Biochemistry -lecture (5)

1) D2 (a variant of iodothyronine deiodinase) can found mostly in:

- A) Liver
- B) kidney & Thyroid
- C) Brain
- D) Central nervous system

Answer:D

2) The site for iodination of thyroglobulin is:

- A) parafollicular cells
- B) cortex
- C) follicular cells
- D) thyroid lumen
- E) blood

Answer:D

3) All true except related to colloid ?

- A. Iodination occur inside lumen
- B) In parathyroid cell

Answer:A
